I opened a bad 50H and find a burned component and a glass diode. Can't figure out what that burned components is. And...someone said they normally don't come with a glass diode.

Thanks....Jay NE2Q

Have TH-F6A Kenwood HT for sale. Original owner (bought it for my wife who doesn't want to use it). Literally has not been used since purchase last October. Have original box, book and packing. Will add AA battery case BT13 and PG3J cigarette lighter adapter. Asking $300 shipped in lower 48. Outside continental US, you pay shipping.

Respond to k7zh46@aol.com

5705. Knwd TH-F6A XBand for FM Sat Work??

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-04 21:25:07 UTC
From: Robert Wilson <wa4puj@peoplepc.com>
Message-ID: <ud8kdfaend3kb8@corp.supernews.com>
Source record: 43910

Does anyone know if the Knwd TH-F6A can be set for Full-Duplex Cross-Band operation for working the FM Sats? This would involve something like setting VFO A for 2m TX and VFO B for 70 cm RX and having the ability to control/vary the VFO B RX freq while TX on VFO A.

Most mobile radios have a "Control Select" function to allow selecting the "side" to be controlled from the Freq Selector independently of the "TX side" of the radio.

I hope this makes sense...Thanks in advance...

Bob Wilson - WA4PUJ

Hi Juan

You are in luck. I have a copy of the schematic for the Icom IC-215.

E-mail me your postal address and I will send it to you.

I have not tried it with the 757 but at work we use computers to talk to some instrumentation and have found the same problem. There is a program called something like 'slowdown' that slows down some of our faster laptops to work with the slower instruments that only used to talk to the slower computers.

5712. 200W RF power mosfet for sale !!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-05 03:36:20 UTC
From: Technician <technician@shaw.ca>
Message-ID: <UM1B8.19497$xS2.1665462@news1.calgary.shaw.ca>
Source record: 43917

I have a brand new, never touched straight from the factory (Macom) DU28200M
200W RF mosfet power transistor for sale. 2-175MHz, perfect for a simple
home brew amp of your design! These are the best that money can buy.
I purchased 3 to build a push pull amp in case I toasted one, the third will
not be used. It is in it's original factory packaging and has not been
touched by human hands (The box was opened to remove the other 2 devices)
since it left the factory. These are so hard to find they must be special
ordered through Ma-com
The spec sheet for it is below, as well as a screenshot to online pricing
from Richardson electronics.
This item costed me $232.98 USD, I will accept any reasonable offer for this
device.
I guarentee this not to be DOA, but of course all sales final since I cannot
guarentee that you have not damaged it by misuse or mishandling.
Please reply to technician@shaw.ca.

Technician :)

It is a serial interface. The baud rate as I remember is 4800 baud. (could be mistaken on the rate), but the speed of the computer has absolutly nothing to do with it.

A possibility is to bit bang a single bit of the parallel port and you have solved the voltage levels as well.

Source record: 43919

It's almost always the case that the instrument is NOT the problem.

Early drivers written by inexperienced writers
often used program loops for delays. As computers get faster,
the delay gets shorter until the PROGRAM fault is exposed.

If you have a defective driver and a fast computer, a slowdown program can help.

But there's also a catch there. Many of the slowdown programs were
written to slow down the play rate of games. They stick some delay
in periodically. Problem with instrument control is that you can mess up
the instrument between the slowdown delays. You can get random failures that
are difficult to debug.
The only program I've found that fixes this is called "snail". It works by
running the cpu in single step mode. So there is not the possibility of
running off a bunch of fast instructions between slowdown delays.
If you thought Windows took a long time to boot, try putting snail in your
autoexec.bat
file....

Bob:
The F6 does display two bands at once and you can monitor them at the same time, but it will NOT crossband/full duplex. When you transmit on one band you no longer have receive on the other band until you let off the PTT. Once you let go the PTT then you can receive on that other band once more. You can work the sats but not in full duplex. I have this radio and am selling another one on this group.

FOR SALE:

LOAD RESISTORS for testing audio amplifiers:

8 ohm 50 watts for $8.00 each plus shipping

8 ohms 100 watts for $15.00 each plus shipping

16 ohms 100 watts for $15.00 each plus shipping

4 ohm 50 watts for $8.00 each plus shipping

2 ohms 100 watts for $15.00 each plus shipping

I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or
16 ohm resistive loads as follows:

Each set-up would consist of FOUR 50 Watt resistors wired for the
correct load impedence. These are brand new DALE Gold Series
(the best precision load resistors you can get!)
and each set-up rated for 200 Watts sell for $24.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms
or 16 ohms, for $15.00 each, plus shipping

E-mail me for details

5723. Need help on ICOM R8500 programming code

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-05 12:27:24 UTC
From: eposta <gred@libero.it>
Message-ID: <ry9B8.10593$US3.260436@twister1.libero.it>
Source record: 43928

Hi there,
I'm writing a program in VB to control ICOM R8500 receiver but I'm
having trouble decondig the
frequency (read back from receiver).
Here an example on what I got:

Tuned frequency ASCII string read back
0.100,00 001000
0.100,02 2001000
0.123,45 50341200
1.000,00 00010
1.002,34 4023010
1.234,56 60452310
10.000,00 000100
12.000,00 000120
12.300,00 0030120
12.340,00 0034120
12.345,00 05034120
12.345,60 05634120
12.345,67 705634120
12.456,78 806745120
14.209,56 14209560
73.918,02 208091730
100.000,00 00001
123.456,78 806745231
1000.000,00 000010
1200.000,00 000012
1200.000,23 3020012
1234.567,89 9078563412

As you can see the string returned by R8500 doesn't have a fixed format and
lenght !
...this is why I didn't succeed yet to write down a routine to decode the
string received back
into a 'frequency' value.
I'll really appreciate if someone could help me !

Thanks and best 73's, Joe.

I have a handheld microwave transmitter make by Innotek. This is about the size of a garage door opener and runs on a 9 v battery. The power output is 10 Mw and it has a built-in antenna with a gain of 7db. Center freq is 10.525 ghz . I have the schematic and circuit board diagram of the unit. The unit was purchased assembled from the factory and I used it to test microwave propagation.

$45

I also have a Cobra Trapshooter Radar detector that I used with this transmitter to receive the signal.

$35

5741. Ft7100 PTT and Mic help please!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-05 20:43:50 UTC
From: "AcKBaR[KAC]" <>
Message-ID: <8b6bdu4u9j14vslnac3q7m3cekul2c6chn@4ax.com>
Source record: 43946

I am trying to wire up a ft7100 to one of my motorcycles like I have my IC 706 on another.

The only problem I am having is how to wire in a mic element and a PTT to the jack on the side of the head. When I touch PTT to ground, it does not key the radio. I can key the radio by grounding the PTT pin on the data jack, but I do not think that allows audio.

I want to ad a simple radio shack mic element for testing till I get to Dayton to buy a Heil.

Any suggetions?

A tad pricey for my liking.
You can do the same thing with a fistful of GR Banana Plugs
& Jacks. The real GR types are rated to 20 Amp DC.

Source record: 43852

I assume you mean that you want to put a mike and some sort of PTT switch on your helmet.

If you use the connector to the head of the 7100, use 4 of the wires: Mic, GND, PTT, and 9V. and run
all 4 wires to your helmet (the 9v is for the mic which won't work without it).

PTT to gnd on the mic key should key it just fine. PTT to ground on the bike should work too if the radio head is grounded (that's the rub, it is not grounded).

I just looked at the schematic (I have a 7100 but it is mounted in the shack as I am not allowed to ride any more, since I fell off my bike and my wife sold it before I got out of the hospital), and a 4 wire i/f to the head jack should work fine.

so use the +9 volt to a resistor to heat of the mic element. mike audio through a cap to mic/gnd and ptt to ptt/gnd and you should be good to go.

cheers

I'm contemplating purchasing a Yaesu FT-847 for VHF/UHF work (since my TS-790 has decided to only work on the 440 band... :>)

Anyway, I was wondering if anyone might know the current production serial number sequence, since the price on this rig has dropped to $1200.00 now, I want to try to get one that was manufactured recently rather than NOS that may not be up-to-date with any improvements, fixes, etc.

Thanks and 73,

Dan - W6DKN

5750. Wind your own multilayer coils

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-06 02:37:33 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <ab4q9c$a4s$1@paris.btinternet.com>
Source record: 43855

NOW AVAILABLE ** New Program "MULTILAY.exe"

Program MULTILAY assists with the design and estimating performance of multilayer air-core coils, wound in bobbins or slots, often used in antenna circuits, preselectors, of radio receivers at low HF, LF and at frequencies down to audio in such applications as loud speaker cross-over networks.

Such coils are used in non-critical applications where high Q is not needed, precise inductance values are unnecessary and a solenoid is ruled out because of it's size in any case.

A hank of coax used as a choke in an antenna feedline can be approximated by this program. There are numerous other applications where home constructors may wish to wind by hand their own simple multilayer coils.

A coil of rectangular winding cross-section is specified simply in terms of inside diameter, outside diameter, axial length and the number of turns. Wire diameter and thickness of wire insulation is taken into account. A fairly wide range of coil proportions is covered by the program.

Inductance is computed to within 5 or 10 percent. Coils are not intended for precision applications and can be hand-wound. Scramble-wound is often acceptable. Self-capacitance, self-resonant frequency and Q are estimated with useful precision.

Use your imagination/ingenuity to find coil formers.

Download MULTILAY in a few seconds from website below. Run and obtain amswers immediately.

Went ang got a six conductor phone cable, cut it and tried touching
PTT to GND as well as bike ground. Nothing.

Clipped an end off a resitor to use to try to just touch PTT to GND
contact. Nothing.

The jack I am using is the mic jack on the right of the radio head. I
even keyed the radio using the data jack. It works, however the
computer symbol comes up and I don't think it allows audio (I wired a
condnsor mic GND to GND power to 9V and other wire to MIC) nothing.

This is the last piece I need to get this bike working for Dayton.
It's very frustrating.

Does anyone have a manual for the ICOM 3200 dual band 144/440 mobile radio?
I just aquired one at a yard sale and need the manual to program the bugger,
especially the PL tone table.

Scans are ok in JPG, MAX, etc formats are ok.

Thanks in advance.

Steve,

Save your money!

Here are some resources.

For a general overview of the BC-221 (also known as SCR-211):

http://hereford.ampr.org/history/scr-211.html

Good general info and explains many of the differences.

--

LOTS of manuals at:

http://bama.sbc.edu

(look under "military"). This site may require the use of extra
software to view some of the manuals. All explained there.

--

For the complete original manual (and many more US military BAs) in
.pdf:

http://www.hg7bz.com/manuals.html

(these files are quite large - 27 MB for the BC-221!)

--

There are probably more out there. Search on "BC-221" and "SCR-211"
(note the hyphens)

Tell your wife that my first wife was just like her. I dumped her the
first time she began even talking crap like that. There is *no* reason
to suffer that kind of abuse. My current YL is not only an "extra" but
has a garage full of bikes all her own.

Source record: 43865

Dan,

Below is a note from a now unfortunately closed FT-847 users group.
It may help.

Alan
WA4SCA

==========

Serial Numbers

Updated 10Jan01

Yaesu appears to use the following format for serial numbers on their
amateur products:

Year of manufacture-Month of manufacture-Production Run-Individual
Unit number, where the month of manufacture is offset by 2, so "C"
means January, "D" means February, "E" means March, and so forth.

Example: 8G051234 = 1998, May (fifth month, or "G"), Production Run
05, unit #1234 in this run.

One key serial number range is 8G05. This seems to be the point at
which Yaesu had corrected the bi-directional CAT issue and made some
other improvements. This version was made in May 1998. Later serial
numbers (e.g., 8L09nnnn) all seem to have incorporated the earlier
improvements plus new ones.

Thanks to Barry W4WB who wrote in with the correct information.

5767. FS Yaesu HTs for 2mt and 440

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-06 15:22:35 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <%cxB8.798$Jk.421@newsread1.prod.itd.earthlink.net>
Source record: 43872

I have for sale a pair of Yaesu HTs. They are both as new, almost no use and work perfectly.
1. Yaesu FT-11R 2 meter HT, 5 watts with 9.6 battery, 150 memories, wall charger, manual, tones,
New price was $279.99
2. Yaesu FT-41R 70cm/440 HT, 3.5 watts with 9.6 battery, 150 memories, wall charger, manual, tones,
original box. This HT has been used about 5 times. Original Price $339.99
These HTs come with the standard accessories. Plus a Comet CH-75 Dual Band Antenna that can be used on either HT. On 440 it provides 3.2db gain. Original Price: $25.95. And a new Speaker Mic that can be used on either HT.
These HTs are small. They were marketed as the "world's smallest HTs with a full sized keypad."
Price for Total Package is: $245 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

5768. FS: Alinco DJ-190 HT

Thanks for reading...

I have FOR SALE, a nice little Alinco DJ-190 HT that's served me well over the past couple of years.(Although I really didn't use it too much since it was used for my packet set-up and packet has all but died around these parts. So its time to part with the HT.)

I've got some special higher gain "duckie" that I bought, and I'll throw that in with the deal. AA Nicads are in the unit. Very nice shape. Manuals included.

$49 takes it...along with $7 for insured U.S. Postal Service shipping and insurance.

First e-mail gets it. If you want to use Visa or Mastercard to get it to you quicker, we can do that through the little ham radio antenna business that I own.

read to connect to boom).

AEA MM-3 Morse Machine
For sale - AEA's MM-3 Morse Machine contest memory keyer, serial # 12415 in excellent condition. This is the latest version with both the QSO simulator, and the contest simulator. It features speed selection from 2 - 99 WPM. A CW training system that allows random code group practice at a steadily increasing speed, random four-letter generator, a QSO simulator, and a DX contest simulator. Automatic serial number insertion, and incrementing in any memory message. Six programmable modes of operation; Keyer / Memory send; Beacon Mode to automatically send a CW or RS-232 ASCII message at a programmed interval; Memory Load;
CW Trainer; Morse Terminal; and QSO or DX Contest simulator. The RS-232 port allows you to control the MM-3 Morse Machine from your computer, including

displaying practice sessions on your screen to check your copy. It also allows you to upload messages or practice sessions from your computer to the message memories. Also, you can use our computer and the MM-3 as a keyboard keyer. Included is the manual, wall supply, and a 9 Pin serial port cable. Asking price; $200.00 including shipping via UPS COD (cash only).

If interested, please E-Mail me at: herb.sims@msfc.nasa.gov or call me at 256-351-6066 (H), 256-656-2965 (Cell).

Message-ID: <sobddu005fchut03cuu61hvu93k8i8bnn0@4ax.com>
Source record: 43875

I am trying to interface an MVP to a controller, and am having a problem finding two of the connections. All the duplex mods have been made, but I can't seem to locate the connections for CAS and PTT. In the documents provided by the controller manufacturer, it says that CAS is on J912 and PTT is on J911.. but I can't figure out where they are? I'm looking on the SAS board, but everything there is in large connectors with multiple pins.

Could someone please steer me in the right direction, please?

Date: 2002-05-06 16:39:44 UTC
From: David Bell <dbell@kw.igs.net>
Message-ID: <mAyB8.2017$d22.799172@news20.bellglobal.com>
Source record: 43877

I have an original Icom BP84 battery (for my IC-W2A) that no longer wants to accept a charge (from my desktop charger.)

Is it possible to "open" the case and "replace" the cells? It seems to be a sealed case. Is it possible to "open" the case, replace the cells, and then close it up again? Have you been successful in doing so?

Are you aware of any firm that sells "replace cell modules" for this battery pack?

Thanks for any suggestions.

Source record: 43880

I will certainly suggest an Icom 730. That is what I currently use. I have it hooked up to a 50 amp power supply (also powering a 2 meter rig and 2m amp). I live in a very low spot. My antenna is at best 5 feet above ground level. I have made contacts all over the country. I can pull it out and stick it in my truck and be off and running in about 5 minutes. I have made mobile contacts from Texas as far away as Brazil and Maine just in the last 3 weeks... talked to Aruba on 10 just the other day. I have a Hustler mobile antenna system for the truck and at the house I have a wire cut for resonance on each band (no tuner can beat a resonant antenna). All of the wires come from a common feed point, and I have better than 1.5:1 across the portion of each band I use. I do have a little bit of stray RF on 20 meters at full power, but if I cut back a little it's taken care of. The total antenna cost (including coax) was under $50. I paid $250 for the radio and got all of the mobile resonators with it. I will echo the suggestion to check your local clubs. That is where I found mine. I saw one on ebay last night with a 20 amp power supply. It went for about $315. There are good deals to be had out there (even on ebay, if you know what you are looking for and what it's worth). Good luck in your search, and welcome to the world of HF.

5776. VX-5R mic connector pinout?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-06 18:49:40 UTC
From: dplatt@radagast.org
Message-ID: <uddk24d9ok8l14@corp.supernews.com>
Source record: 43881

Has anybody worked out the actual pinout for the Yaesu VX-5R (and similar) HT microphone/speaker connector? It's a 4-conductor 1/8" phone plug (available from Mouser, BTW). The manual suggests that one can "build your own cable using a four-conductor miniature phone plug, per the diagram below", but the diagram only shows how to connect a TNC to Yaesu's CT-44 adapter and doesn't give the actual assignments for the four conductors.

advTHANKSance!

I imagine you could, but you can also buy a new one from Yost
http://www.mrnicd-ehyostco.com/hamradio.htm#ICOM for $40.

You should go and look the Vertex Standard Japan website. It takes a while always that the product information is updated to the US / UK Yaesu website.

http://www.standard-comm.co.jp/Products/amateur/vu_handie.html#

I don't understand japan but there it is. The newest products are usually published at the Japan website, as they are a japanese company...

Yaesu FT-708R UHF 440-449Mhz Portable - 1.5W output. Comes complete with 3 batteries (in good condition - FNB-2), real leather case, speaker/microphone, NC-9B wall-transformer charger, & all documentation. Works great, 10 memories, scanning, rugged die cast chassis - great for extended duty packet radio use! Comes with a cable for use with a packet controller (old GLB, but can be modified for TNC-2 style).

Jack, WB2SIB

I have sold my amplifiers so I no longer need a tuner. MFJ VersaTuner III model 962D medium power tuner. T network roller inductor tuner. Built in 4:1 balun. antenna switching for 2 antennas/bypass.

Works with power levels of amps such as Heath SB-200, Ameritron AL-600 and Collins 30L1 etc. Tunes all frequecies from 1.8 through 30 MHZ. Coax fed antennas, long wires and open wire feed lines. Cross needle illuminated meter displays peak/avg forward/reflected power and SWR.

This tuner looks nice with only minor blemishes of any kind. I have the original manual and box. This tuner works perfectly. email for pix.

$140.00 shipped CONUS only. MO/Cashiers/PAYPAL

Not the 520. I had a TS-700 and a TS-520. Not even a vague
resemblance. Closest match was probably a TS-660 but it
was only 10W 15M-6M.

--

Hi there,

I don't know if I'm in the right forum, but I'm looking for a mini transmit receive combo. The idea is this:

I have a motorcycle helmet that has a built in headset, and an FRS communicator radio attached to the outside of it. The radio has a pass-through for an audio input (cd player, fm radio, mp3, etc). What I want to do is be able to mount my mp3 player to the front of my bike and wirelessly xmit the signal to the frs radio, rather than swing a cord up to my head. In my ideal world, there'd be a small dongle that plugs into the mp3 player mini-jack that transmits to another small dongle that plugs into the communicator on the helmet.

I've seen the Kima Link It unit, but it transmits to an FM radio, meaning I'd have to add an extra layer yet to the mix that I want to avoid.

Anyone have any ideas?

regards,

Paul

I have two Motorolla desk sets. They are wired remote sets for a
motorolla base station. Wire them up and have the ability to monitor and
transmit from where your radio is not!

They worked when pulled from service (by me) five or six years ago. Sat
in a box, waiting for a project that I never got to. They are in fair to
good physical condition.

http://www.eskimo.com/~ghopper/mphone1.jpg

I'll take $15 each or $25 for the pair plus shipping.

Questions? email ghopper@eskimo.comm

Thanks Bob,

Been there done that. BAMA doesn't deal with solid state equipment. The Russian website doens't have it either. Icom had some but not the older manuals on it's website.I can also contact Icom and buy one from them too.

Since I have helped other's with their requests I wanted to try here on the news groups first. Most of it I have figured out, the only thing is the cryptic pl tone codes, instead of acutal frequencies they are in some sort of numeric sequence up to something in the range of 60 something. This is like an Alinco I have, the chart is necessary to program the pl tones.

Thanks for your suggestionst though. Perhaps someone else will still have the manual and be kind to help another ham out.

Ray

I have the manual, but it is in storage, in another city. What I would suggest
is you get a list of the available tones typically used in repeaters. Start with
the lowest tone, 67.0, and call that "1". Then go to 69.3, and that would be
"2", and go on up to 254.1

From that, you might be able to guess the right number to stick in there.

(of course, these would be tones available circa 1984 or so...)

Good luck...

An article on the BC221 was written by H.J. Long BEM G5LO in the APRIL
1960 edition Practical Wireless. That was, of course, when radio
amateurs had to have some technical knowledge and needed to demonstrate
that they could measure their transmitting frequency.
I could scan and send you the relevant pages if you so desire.

5836. external batteries for HT while hiking/camping.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-08 18:44:46 UTC
From: demetrio@iquest.net
Message-ID: <3cd96b00.341559484@news.iquest.net>
Source record: 43841

My Alinco DJ-580 (dual band) handheld has a side jack where you can plug in a connector for external 12/13.8 DC voltage.

I currently have only the 7.2 volt regular bottom-slide-on Alinco battery which only lets you transmit at 2 watts. The 12 volt Alinco battery lets you transmit at 5 watts.

I want 5 watts for when I'm out in the boonies hiking or camping.

Using an external battery plugged into the HT's external-battery jack seems like a much cheaper alternative than buying two expensive 12V Alinco batteries that you slide on and off the bottom of the handheld.

(Alinco's batteries, both 7.2 v and 12 v are only rated at 700mAH)

I can get generic sealed lead-acid 12 volt, 2000 mAH batteries for $30 at the battery store. I could carry this battery in a fanny pack, and have it wired to a little barrel plug (what's the correct name?) that goes into the side of the HT. I'm a "big boy" so carrying a few extra pounds doesn't bother me.

Basic Dumb Questions: (I'm new to Ham radio)

1. Is there a downside to this kind of arrangement of using an external sealed lead-acid battery on a HT?

2. Can you recharge a sealed lead-acid battery direct from your car battery via the cigarette lighter? Or do you need some kind of current limiter in between to prevent too high amperage when you start the recharge cycle?

Thanks!

Nope nice try

You see Martin Chernech never appears anywhere else he is brand new.

Coincidently He only posts about your web page.

He also posts from Cable one with an IP almost exactly the same as yours which is a dial up which assigns a new IP everytime you come on.

If you think Im buying your Nieve routine Im not. You see google saves all your postings with your IPs. Your now trying with your recent messages to cover your tracks. But the tracks are all over the place.

Your trying to use this Martin routine to avoid killfiles because your not getting attention.

What you need is professional help.

5838. CD2545 Devices / Atlas 350XL

Hello,

W7ASU at Arizona State University found an old Atlas 350XL transceiver, circa 1978, in storage. My son brought the unit home for me to check out. I aligned the receiver, but found one of the final amplifier transistors, a CD2545, bad. There are 4 in the amplifier and must be matched by HFE to share the load. Of course, these transistors are no longer available.

If it were working, I'd guess that the radio has about a $200 value.

I seem to have at least these choices:

1) Replace the devices with a matched set of new equivalents. This is from $60 for matched HFE ranges from the manufacturer to $100 for devices that are actually matched by testing and comparing.

2) Perhaps someone on this list has a few of the original CD2545 transistors. Used in unknown condition is fine. I would be happy to test and sort them against my 3 working devices to get a matched set of 4, as long as the price was right.

3) Perhaps some one on this list has a junk Atlas 350XL. Maybe I could salvage some matching transistors from it.

4) Maybe someone wants W7ASU's Atlas 350XL so badly that they'd make an offer for this one with its bad transistors.

5) Perhaps W7ASU should just throw the radio away. The 14 volt 32 amp power supply is nice to keep though.

Well, please send your offers and advice along. I will read and consider everything. You may want to visit www.asu.edu/clubs/amateur_radio_society.

Thanks and please reply to this group or:

demetrio@iquest.net wrote:
(snip)
: 1. Is there a downside to this kind of arrangement of using an external
: sealed lead-acid battery on a HT?

Aside from weight and size? Well, most radios may not activate the "low battery" cutoff when powered thru the external power jack. This is the circuit that prevents you from completly draining a battery pack attached to the radio. Now, as you well know, your radio will operate quite nicely with (what was it?) 7.2 vdc. If you drain a 12 v gell cell to 7.2 volts you have severly damaged that battery! Most folks recomend that a 12v gell cell not be discharged below 10.5 or 11 volts before re-charging. Some of the newer HT's have a built-in battery voltage meter that you can check, otherwise you need to monitor the voltage somehow.

: 2. Can you recharge a sealed lead-acid battery direct from your car
: battery via the cigarette lighter? Or do you need some kind of current
: limiter in between to prevent too high amperage when you start the
: recharge cycle?

A sealed lead acid battery (gell cell) really should be re-charged with a charger specifically designed for a SLA battery. This will insure the maximum life. You *can* re-charge them by other means, but unless done properly will shorten the life of the battery.

yours
>which is a dial up which assigns a new IP everytime you come on.

Hello Rick,
Sorry Rick....I am not on dialup. I use cable modem. Obviously Rick if
this guy doesn't have the - exact same -IP as me (cable modem IP's are
static) then it sure as hell couldn't be me.
Besides Mr Magoo..Cableone has ISP service in 16 states and over 60
different cities...
Nice try but you stink as a detective. Keep your day job!!!

Should work fine. And last much longer than HT battery packs.
>
> 2. Can you recharge a sealed lead-acid battery direct from your car

I would use a charger circuit of some type. You could make one. If you
charge at too high a rate the batteries can get too hot. But it
depends on the battery also and the current used to charge. MK

Actually using Google Ive got you nailed, Cable modem can and do
change IPs. I have one and mine changes if I wish. Release renew all
sound familiar.

Nice try, what a lame attempt at not using your own mail address.

Truely pathedic. Signs of a spammer. Whats next, relay attempts

If you didnt reside on Verio and Cable one two of the biggest
Spamhouses in the net.

Oh well, watch yourself

Oh and using a Reply to of wily@irs.gov. You know using a false
email like that and causing problems with the IRS.GOV mail servers
could land you in jail.

Try a different EMAIL addy. Proves my point 100%

Loser

> 1. Is there a downside to this kind of arrangement of using an external
> sealed lead-acid battery on a HT?

No... you just have the weight of the battery.

> 2. Can you recharge a sealed lead-acid battery direct from your car
> battery via the cigarette lighter? Or do you need some kind of current
> limiter in between to prevent too high amperage when you start the
> recharge cycle?

Yes... I use a small solar panel with a diode so it does not discharge the
battery
when there isn't enough sunlight. I have also used my car battery to charge
mine
during a short trip to the grocery store and back. I have never left it
connected
for a long period of time. I have found them recharge rather quickly.

I have found the more comment 12v 7.2ahr batteries used for
UPS's cheaper at hamfests. The last few I picked up were $7 each.

FOR SALE:

Knight TR-106 with V-107 VFO
Excellent looking Knight 6m AM transceiver with the matching VFO.
Comes with the original, blue 'Knight' labelled Shure hand
microphone. Pictures at web site below.
This radio can operate on either 12V DC or 115V AC.
Comes with 115V AC cable.
Otherwise complete and has very nice appearance.
Sold as-is. Comes with a copy of the manual.
Available for $125.0 plus shipping

Harvey Wells Bandmaster Senior TBS-50C all band AM-CW transmitter In
very good condition, complete and untested. Reported to be working
when last used. No VFO or power supply. Front panel shows really
nicely. Will sell for $125.00 plus shipping

Heath HW-17 with mic - $45.00

Heath HW-202 with mic - $35.00

Heath DX-35 - $85.00

Heath VF-1 - $75.00

Heath HD-15 Phone Patch. Unit is in excellent condition with all
original knobs etc. Will sell for $16.00 plus shipping

Yaesu SP-901P Phone patch / Speaker Accessory
Perfect to round out your FT-901 line. Unit is in excellent shape but
needs two scratches touched up on the top. Front looks great,
including the original knobs, meter etc.
Will sell for $45.00 plus shipping

SpeedX straight key in excellent shape with the 'two stage' navy
knob. Sell for $35.00 plus shipping

WW2 British Mark 2 straight key. Missing two screws, but otherwise
clean and in nice shape. Contacts are still in very good shape. A few
imperfections, but will polish up and restore nicely.
Will sell it for $39.00 plus shipping

Straight Key - for the CW buff who wants to be ready for straight key
night. Also useful for beginners learning the code. This has locking
bar for tuning and is an adjustable key with nickel silver finish.
Available for $24.00 plus shipping

TS-175 Frequency Counter - exceptionally nice military unit in near mint condition with original chart. covers 125 kHz to 20 MHz. Will sell for $75.00 plus shipping

LM-10 frequency counter - 'Type CRR-7402B crystal calibrated frequency indicating equipment' with original chart book, in very good condition. Has connector for power supply on the side. Will sell for $49.00 plus shipping

Pictures available on web site below.

Old biker trick: simply put a 12V light bulb in one of the charging
lines. It will limit current to (its wattage)/(charging battery
voltage). Brightness indicates charge rate.

Quite powerful MOSFET devices are now ~$2.00 each, just to give an
idea of value/$spent. Surely there are inexpensive solutions for this
rig of a type appropriate, MOSFETs being the only current example I

have.

5870. FS Matching Yaesu HTs

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-09 16:27:15 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <DrxC8.2005$re5.1212@newsread1.prod.itd.earthlink.net>
Source record: 43774

I have for sale a pair of matching Yaesu HTs. They are both as new, almost no use and work perfectly.
1. Yaesu FT-11R 2 meter HT, 5 watts with optional 9.6 battery, 150 memories, wall charger, manual, tones, dual band ant with gain. New price was $279.99.
2. Yaesu FT-41R 70cm/440 HT, 3.5 watts with optional 9.6 battery, 150 memories, wall charger, manual, tones, original box. This HT has been used about 5 times. Original Price $339.99.
These HTs come with the standard batteries and accessories. Plus the Comet CH-75 Dual Band Antenna can be used on either HT. On 440 it provides 3.2db gain. Original Price: $25.95. And a new Speaker Mic that can be used on either HT. These HTs are small. They were marketed as the "world's smallest HTs with a full sized keypad" in the mid to late 1990s. These HTs are 3 years old.
Price for Total Package is: $225 shipped in lower 48 or I will sell each HT separately for $125. Thanks, Charlie Hugg, K5MBX

just plug the puppy in and see what charge voltage it puts out. you may want to put a resistive load on the battery terminals to give the switching supply something to load it.

This subject has come up at least 1,000,000 times on numerous newsgroups and reflectors. Everyone has an opinion and they are all prejudiced. Yours is the only one that counts when you lay out the bucks. If you are an ARRL member, go to their website and read their product reviews or join the specific reflectors for both radios on Yahoo Groups. You'll be better prepared to make a decision than listening to all the opinions of others and then trying to make a decision.

How does one morse key an HTX 202 handheld 2 meter transceiver? Does one need an external keyer that goes into the mike jack? I have downloaded the instructions about the radio from the support.tandy.com web site but there is nothing in there regarding morse keying. Also how does one send a pre-programmed "D" sign for "go ahead" from this radio?

5878. power output adjust on Kenwood TM2570A (mobile)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-09 21:00:32 UTC
From: demetrio@iquest.net
Message-ID: <3cdae2f9.437823371@news.iquest.net>
Source record: 43782

A ham friend has a kenwood TM2570A mobile 2 meter. We can't find the manual, so we'll have to order one. The only places that have these manuals have them for sale, no free online e-text manuals for this model.

Its been years since he's used it, and he doesn't remember how to adjust the output power. We don't want to run the full 70 watts.

Does anyone have a Kenwood TM-2570-A mobile, that could please tell me here in the ng or in email if it can and how to adjust output power on this model? Can't wait to get on the air.
Thanks!

Rice boxes.... baahhhhhhhhhhhh ! Sold all mine and bought a Corsair
II, best rig I have ever owned !

Buy a Ten Tec you wont need DSP because the receivers are so quiet.
I'll put my Argonaut up against ANY rice box and win hands down
receive wise.

There are ugly but man what receivers !

Geoffrey,

1) Yes
2) No, amateur operators are assigned specific bands and band segments based on the license they hold.
3) Frequencies and band segments vary somewhat by country, or even regions within a country, but the basic bands are 160m, 80m, 40m, 30m, 20m, 18m, 15m, 12m, 10m, 6m, 2m, 1.36m, 70cm and some higher band segments in the microwave regions.
4) There is no radio that can work all ham bands, but some can get all the above bands, except for the 1.36m band. These are made by companies like Yaesu, Kenwood, Icom..

5892. Make $11,111 from 50cents, 100% No Spam

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-10 06:12:32 UTC
From: tt
Message-ID: <3cdb64d0$1_3@news.nntpserver.com>
Source record: 43796

You know how this works. I had to try this one...It's
50 !!! How can
you go wrong?

Just FIVE DIMES is all it takes to create a HUGE
income in your e-gold
account over and over again for as long as you want.

IT IS SO CHEAP AND SIMPLE, ONLY THE REAL LOSERS ARE
GONNA CHEAT THIS
ONE!

Here are the simple instructions:

1) Send 10 cents to each of the (5) e-gold accounts
below:

-=-
1. 529550
2. 540467
3. 542443
4. 446153
5. 183092
-=-

2) REMOVE #5 from the list, Move the other 4 accounts
Down ONE
position, Add your e-gold account to the TOP of the
list and re-number #1 to #5,...#4 is now #5, #3 is now
#4, #2 is now
#3, #1 is now #2, and YOU are #1, very easy to do.

3)Now just send this out to 10 responsible people!

Here is what happens:

Level#1 You get 10 = 10x$0.10 = $1
Level#2 Those 10 get 10 = 100x$0.10 = $10
Level#3 Those 100 get 10 = 1,000x$0.10 = $100
Level#4 Those 1,000 get 10 = 10,000x$0.10 = $1,000
Level#5 Those 10,000 get 10 = 100,000x$0.10 =$10,000

When your name reaches level 5 you will make $11,111

5893. Re: Yaesu FT847 Narrow CW/SSB?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-10 12:09:41 UTC
From: "Alan P. Biddle" <APBIDDLE@MAILAPS.ORG>
Message-ID: <pvdndu0r5m5c53sdhjp69jhlj93jtl3luv@4ax.com>
Source record: 43797

Andy,

This is from the unfortunately now closed FT-847 users group:

==========
Using a narrow CW filter to copy narrow band digital modes.

If you have installed a narrow CW filter, you can use it to your advantage with the narrow band digital modes like PSK and MFSK. Normally, to transmit in these modes, you need to be in the SSB mode, but you can't use your CW filter when in the SSB mode. So, the answer is to run split mode, with one VFO on RX running the narrow filter on CW and the other on TX in the SSB mode. This is easy to do.

1. Set your main VFO to USB (PSK31 is typically used on the upper sideband on all bands, while MFSK follows the usual conventions for USB/LSB) and tune in the signal you want to copy.
2. Press and hold for 0.5 seconds the A-B button to load the frequency and mode into your sub VFO.
3. Now press the SPLIT button. The display will show a small RX-TX image on the display. (If this shows, instead, a TX-RX, simply press the REV button to turn it around.) You are now ready to TX on the sub-VFO.
4. Press the CW button and the main VFO will be tuned to the receive frequency. Now you're receiving in the CW mode and can press the NAR button to insert your narrow CW filter. Note that you do not change either VFO at any time in this process; everything's automatically matched for frequency.

That's it. Note that you cannot change any VFO setting; if you do, you will then be "unsynched" on your RX and TX frequencies. Also, don't forget to disable split operations (by pressing the SPLIT button again) or the next time you transmit, you will be on the frequency and mode on your sub-VFO, not the frequency/mode on your main VFO!
==========

Not sure you'll have much luck working CW with an FM transceiver - BUT
you COULD wire up a keyer to fit the mic plug of your radio and use
that for sending CW...

>4) What radio can work on all bands?

Amateur ("ham") HF (1.5-30 MHz) radios receive across the whole spectrum, but can only transmit on the "ham bands," described by other posters. Most can be modified to transmit across the spectrum too. They can not legally be sold this way. I believe this is based on a concern over excessive bandwidth. You can not legally transmit on the unauthorized frequencies, except in an emergency.

For example, if you monitored some marine HF bands and wanted to be able to assist on a Mayday, I think you could lawfully use such a modified ham radio. However, there are marine HF radios that also have ham capability.

You'd have to create an audio tone to use for CW....we're on FM, not CW. If you keyed the HT, all you'd hear is whatever background audio was present, no carrier tone. Why not use a CW practice keyer and generate tones that way? Key the HT and go to town.

Bill,

Thanks for your comments.

I don't have the skills to change the circuit to use MOSFETs. Even if
I did, this is a very compact layout and just changing package types
would require a new circuit board. I think that the path of least
resistance is just to find replacement devices.

Thanks,
Mike WA7ZPU for W7ASU

5904. 200W RF power mosfet for sale !!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-10 17:18:38 UTC
From: Technician <technician@shaw.ca>
Message-ID: <OhTC8.54931$uE2.3803054@news2.calgary.shaw.ca>
Source record: 43708

I have a brand new, never touched straight from the factory (Macom) DU28200M
200W RF mosfet power transistor for sale. 2-175MHz, perfect for a simple
home brew amp of your design! These are the best that money can buy.
I purchased 3 to build a push pull amp in case I toasted one, the third will
not be used. It is in it's original factory packaging and has not been
touched by human hands (The box was opened to remove the other 2 devices)
since it left the factory. These are so hard to find they must be special
ordered through Ma-com
The spec sheet for it is below, as well as a screenshot to online pricing
from Richardson electronics.
This item costed me $232.98 USD, I will accept any reasonable offer for this
device.
I guarentee this not to be DOA, but of course all sales final since I cannot
guarentee that you have not damaged it by misuse or mishandling.
Please reply to technician@shaw.ca.

Technician :)

Source record: 43714

I am about to enter the world of PC sound card interfaces and am trying to figure out what I really need for maximum flexibility. My radio is an FT990. I made a plug that pulls PTT and GROUND from the Packet jack and puts in on a gang of RCA jacks (for all the toys that seem to want PTT). The FT990 has PATCH-IN (RCA jack), which mixes with MIC, and AF-OUT (RCA jack), which is an attenuated speaker-out.

Is there any reason I can't just hook the AF-OUT to the sound card IN, and the PATCH-IN to the sound card OUT? Do I need the isolation transformers in the Rigblaster, etc.? If so, why?

What should my COM port serial cable have? I believe I need pin 6 for ground, pin 9 for the CW key, and pin 3 for PTT. Am I correct? What other pins do I need to effectuate for the popular Windows programs that use the sound card and handle non-voice modes (e.g., PSK31, CW, RTTY, Packet)? What about the programs that do digital filtering?

Try http://www.pacparts.com for Kenwood replacement parts. However, I would try to source some 14 vdc replacements rather than the 12 vdc stock bulbs. Not much difference in light output, but they will sure last a lot longer in a 13.8 vdc environment. Since they are a real hassle to replace, you don't want to be doing it very often...

Source record: 43720

Ken,

I use a FT900. I buillt a PTT cicuit that I saw on eham.com that was designed for an FT840. It also allows me to control the radio from the computer. As far as your other question regarding the neccessity of using the RigBlaster's etc, I don't. The above mentioned circuit plugs in between the COM2 output on the computer and the CAT jack on the back of the FT900. The audio in & out from the sound card plugs DIRECTLY into the DATA connector on the back of the FT900. I use no isolation transformers whatsoever just a straight cable between the DATA jack and in/out jacks on my SB Live card. I may be one of the lucky ones, but I just thought I would give it a try first and it worked for me. I am making regular PSK contacts on 14.070 and my SSTV pictures come out clear as verified by a ham across town. If you have any questions e-mail me directly.

73,

Max ve3tmt@rac.ca

From: "Bob Lewis (AA4PB)" <rlewis@staffnet.com>
Message-ID: <udoe2pjjua9fb3@corp.supernews.com>
Source record: 43722

Isolation between the sound card and rig is not necessary in all cases. It depends on the computer, the rig, the antenna (how much RF floating around the shack), the power supply, and the AC power distribution supplying the equipment. I've been successful in some cases with nothing more than a couple of resistors to set the level correctly. I'd give that a try first - check your signal to see if it is clean and hum-free. If you find that you need the isolation in your case then I'd add an interface with isolation.

The biggest advantage of something like the RigBlaster is that it's easy. Isolation doesn't hurt anything (except maybe your pocketbook) if you don't need it and its there if you do.

5920. Re: Rigblaster? Rascal? copper?

Newsgroup: rec.radio.amateur.equipment

Source record: 43724

If you want to use the vox to key the rig about all you need is just some audio cables to connect theings together. Ou will probably want to add about a 100k and a 1 k resistor network to knock down the audio of the sound card to the audio input of the rig.

You will not be about to hook the serial cable to the keying lines without some level shifting interface.
The RASCAL homepage has some diagrams for the various rigs and the $ 30 or so kit price is not too bad if you do not have a well stocked junkbox.

Look here for some soundcard programs.

As one gentlemen stated 'pacparts' has them, however they are not 12 volt rating. Looked into this some time back, and the display runs two bulbs in series.

I am not trying to work the HF bands with a VHF transceiver; it is just
that there is some Morse activity on 2 metres in my area and I thought
that it might be good practice to work it (in good time, of course). I
was hoping that there might be a built in oscillator in the HTX 202 for
the purpose of sending Morse but I guess there isn't.

I am going to Dayton on the 18th. I am going on a bus with the radio club. I can bring small items with me. Also I would like to raise some cash before Dayton so make an offer on anything on the list.

Please if you have questions or want to make a trade contact me off list at my e-mail address. gundoc@insightbb.com Some of these lists are not swap lists and only tolerate my post because it is only once a week. To the group owners thank you for letting me continue to post to the group.
Dean

GE Portables

GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00

GE MPA VHF Select 157 - 174 split. Nice radio 9 condition with battery and
standard charger. I have it programmed down to 154 MHz with no trouble but
will go no lower. $200.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A little
paint wear on the edges but I have seen worse. With charger and battery.
$225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $90.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good
and come with a battery and standard charger. 125.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display.
with battery and standard charger. $135.00

GE PCS UHF 8 channel. I have this radio on the uhf ham band for testing and
it works the local repeaters. With battery and charger. $90.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz.
With battery, antenna, leather case, and pocket charger. $100.00 each.
Five available.

GE MPS VHF Like new 10 channel. With new battery, new antenna, and a
standard charger. $65.00

GE MPS VHF 12 channel. Set of 4 that talk to each other with all new
batteries and antennas. All in a rack charger. $225.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1
good
battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I
sold
this radio a year ago but have taken it on trade. Condition 8 with
belt clip
and charger. I had this radio run for stolen from CSX by a local CSX
Special
Agent when I first bought these in a lot and was told that it had
been sold
at salvage. Perfect for a RR Museum or shortline on a budget. This
could
also be programmed for marine frequencies. Like new tall
Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. No accessories. Has all 8 proms.
$100.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240
450. - 470 Looks good. $125.00

GE MVS UHF 16 channel scan. With Mic, Bracket, and power cord. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00
each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr
II or
Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that
I have
seen marked Ericsson) $65.00

.GE Ranger VHF 150.-162 100 watt mobile. Complete with cable, Mic,
speaker,
and S550 control head. This is a great public safety mobile or can be
tuned
to the 2-meter ham band. $155.00

GE S990 head. Looks new but I have not had time to test this yet.
$75.00

GE S550 head 16 channel looks good but not tested. $35.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit
charges your
battery and turns your portable into a mobile radio. (Convert a Com)
With
mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice
Guard,
MPS, and Ranger. Printer is not working but I tried and it programs
radios
without the printer. Has manual for the programmer and the computer.
Has Phoenix cable and Voice guard cable. All in the original GE case
tested
and working. (except printer) $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $30.00. I have seen
programming
cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5.
$4.00
each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2.
If you
buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820
heads.
And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid
rack charger with a DB 15 cable and uses a MPD body to attach a battery to.
Has LED readout in display area of MPD body to tell discharge rate. Another
rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and
power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III VHF 146-174 split. 120 channel Alpha-Numeric display with
secure - net module. (no out of country sales) des I think. I have been
using this all week and talking on the ham band to test this radio. Battery
has lasted all week during drive time so it seems good. With rapid charger
and big battery. $500.00 or trade for a VHF MRK II

Icom 3200 a Dual band ham radio. Has box and manual but no mounting bracket.
Has tone squelch board installed. $200.00

Icom IC 24-at Dual band Portable. In good shape, Display has no scratches
and only 1 small patch of the paint is peeled off of the back of this radio.
With manual and wall charger. $165.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery
charger but I will split up the pair if someone wants 1 radio only. 6
channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex

frequencies. 2 radios and 1 charger $195.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland.
$75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and
charger I had to re-list due to a deadbeat buyer. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals
for each radio. Also have a working battery and charger for each. I have 4
of these. $50.00 all

Uniden SMS 825 ts, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the
sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you may
wish to make.

Motorola X9000 VHF 50 watt, Alpha-Numeric head, Siren complete.
$425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe, Re-cased looks new. 16 channel scan
with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric
head.$225.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms,
anything you have extra. MPA or MPD portables what do you have and what do

you want for them?
Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and
only have a no DOA warranty if I say it works. If I say not tested your on
your own. If I think it may be bad I will not list it. I take cash, Postal
Money Orders, Paypal, and checks but I hold them for up to two weeks to
clear before I ship. If you have a question E-mail me.

And how many remember when the US Novice license had 2M
privileges. (Actually, I think it was gone by the time I was licensed
in 1972, but I read about it.)

It had allowed for phone use, but then when incentive licensing came
along, the phone was dropped. However, code was still
allowed on the 2M novice sub-band. Significantly, MCW was still
allowed. This is done by feeding a keyed audio tone into an AM (it would
have been AM) or FM transmitter. Kind of odd, since the novices weren't
allowed to talk on those AM transmitters, but they could make use
of them by hooking their code practice oscillator to them.

It did allow for novices to use 2Meters, by making use of all
those AM rigs of the time, like the Gonset Communicator and the Heath
Twoer.

I forget exactly what year the 2M novice allocation went away completely.

And I don't know if they still put it in, but there was a time when
you could buy all kinds of license-free 27MHz walkie talkies that had
a big pushbutton on the front, that would activate a tone oscillator.
And right above it, there'd be a Morse Code chart to help you send.

This mike has part # 19-1125 printed on the back.
It has the keypad on the front and has the 8-pin
connector that looks lile a computer network connector.

I don't really want one that works poorly or has the
letters worn off.

Reply to marz@t4x.com, but you must change the
letter 'z' to a 'k', and change the letter 'x' to a 'p'.
The email has been deliberately written wrong
in order to prevent filthy scumbag spammers
from getting my real email address.

It appears that the interfaces do not have the capability of keying CW, yet the various PC programs all say they can do CW TX. I do not understand how they can key CW just using PTT and MIC.

My MFJ-493 keyer keys CW from the PC and straightforwardly provides a 1/4" phone jack for that purpose. My KAM'98 does the same thing by keying pin 9 to ground of its DB-9 jack.

It seems to me that all the PC software would have to do is pick an appropriate, non-energized COM port pin and key it to ground. I understand that, yet I can't get an answer I understand from either the software folks or the interface folks on how they accomplish CW TX.

Maybe a PC can't close a non-energized COM port pin to ground. If so, the interface would have to convert some other COM port signal to the keying that is needed. None seem to do this.

5942. Which HTs have a detachable/remote face?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-11 13:40:31 UTC
From: zirconx9@yahoo.com
Message-ID: <e7d49913.0205110540.62114485@posting.google.com>
Source record: 43747

I am looking for an easy 2M installation in my car. I was thinking of going with a handheld with a remote face, like the Icom IC-Z1A, and just stashing the radio underneath my center console, and having the mic hang on a mic hanger. That way I can run the whole radio from the mic, and I don't have to worry about where to mount the radio (my car doesn't really have a good spot). I have an amp I could use for it.

So can anyone tell me what models have this feature? The only one I know if is the Icom IC-Z1A, and I can't find any of those for sale right now. I'm on a budget (like < $200), so an older radio like that would be great. I would be nice if I could use it to listen to FRS frequencies also (the Z1A will do this I think).

Thanks!

-Ryan

I have an ICOM A21 VHF AIR BAND HT I want to trade for a dual band 2M/440 mobile. The A21 is in excellent shape with 2 nicad batteries, 1 battery pack that can hold alkalines and a PTT box for headset. All is in excellent condition.

If you have a nice, newer dual band mobile you want to unload and your a pilot looking for an HT this is the deal.

Also any good ideas where else to post this offer would be appreciated.

Matt

I believe this kit dates back to the 1970's or early 80's. This is model
EC-1200 from Eicocraft's series of educational electronic project kits,
similar to the ones offered by Allied, Radio Shack, Lafayette, Heathkit, and
others back then.
Antique radio buffs can use this to bradcast Old-Time radio programs and
music through their display radios.

In part, the description on the back reads:

"...you will be able to broadcast voice, music, and any audio signal through
any AM standard broadcast radio..."

"...TUNABLE to a vacant frequency on your AM radio..."

"Transmission range is 50 feet or more, depending on antenna length..."

Ending Sunday.

Tnx for Looking,
Tom

Hi Guys;
I am never going to have the time required to play with these "gems", so I am selling them for less then what I paid.
1- 75A-4 receiver, 3.1/2.1/500hz filters, really nice.
2- KWS-1 w/4cx250a's, RF & Power supply with key.
3- Matching speaker for the A4, I think the Flocking may have been changed because it has a metal type grill, no, its not the big giant, tilt face speaker :-).
Original manuals for both, hose, 2 spinner knobs/1 cracked & epoxied but have the plain non vernier type knob also.
Pick up price on LI, NY is $3,000.
No pictures, come & see, you need to be local anyway I think.
Oh, the inside of the A-4 & RF deck look like new or close to it for being almost 45 years old.

Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

>
> Ken KC2JDY

Myself, I use the rigs speaker out to the soundcard line in. And the
soundcards line out to the preamp circuit in my mike base. I use
nothing else. No isolation circuits or anything. I have had no
problems at all so far in any digi or video mode so far. I don't use a
com port connection or PTT either. I just run VOX. Anyway, my
rig/puter connections are VERY simple, and work just fine for
everything so far. My usual puter rig is a 706g, but I run my other
rigs the same way. Myself, I think the most critical part of the whole
deal is just getting the output level of the soundcard down to a level
that won't overdrive the rigs mike input. I use a simple resister
circuit for that. When I ran my ic-730 with the computer, I fed the
audio straight to the rig as the 730 required a preamp anyway, but
"most" rigs will need the level lowered a bit.

Ken-

It is a WWII Military J-38 Key. However, it not only has the broken knob, it is missing its original base. I don't think I'll bid. It will probably go for more than it is worth, even if it were cleaned up.

I have a free Motorola power supply to give away, pickup only.

I live in Mandeville, LA which is north of New Orleans.

I used this PS to power a Motorola Syntor 110W radio, but my friend used it to start his car.

It is built like a battleship and would be great for a base rig, shop use, car jumper or other hi-current 12V need.

If you want it I'll reserve it for you.

I have not looked at the CW programs but it might just be they are sending a single audio tone to the SSB transmit mode and generating a 'fake' cw signal that way. A single audio tone keyed off and on if it does not have any (well, very low) distortion will not be distinguished from a transmitter that is actually turning on and off the carrier.

Who makes the best (low noise/high gain) preamplifiers for the amateur bands of 2m/220MHz/440mhz/900MHz/1240MHz???
Are their any websites that have ratings or comparisons of current preamplifiers?

For mast mounted preamplifiers in the 144, 432, 1240 bands consider ICOM AG series and SSB Electronics SP series preamplifiers. The ICOM preamps are controlled from 12 volt bias on the feedline. The SSB preamps can be powered the same way or will accept external power. In that case they are switched with built in VOX. If you are looking for low noise preamplifiers in general try Advanced Receiver Research, Downeast Microwave and Hamtronics. There are a few more vendors and some offer DIY kits. You really have to research the pros and cons based on your application.

I have FOR SALE a MINT YAESU FRG-9600 VHF/UHF Communications Receiver. This is an awesome unit that covers 60-905 mhz, ALL MODES (AM-N, AM-W, FM-N, FM-W, USB/LSB. Has 100 memories, TRIPLE CONVERSION, VFO, clock, timers, multi color signal strength meter and MUCH MORE! This radio covers it all! NO BLOCK IN FREQUENCY COVERAGE! CONTINOUS COVERAGE! This is commercial quality, and is in MINT - near NEW condition! If I had the box, you would think that it is new! Included is the radio, mobile mounting bracket (NEVER has been mobile), DC Cable, Wall-Wart Power Supply, Telescopic Antenna and Manual. I cannot stress the quality of this radio. You will be very happy with this. I am asking $400 INCLUDING Priority Shipping in the US. Please email with any questions! Thanks!

Landwehr make some excellent 2 & 70 preamps if you can find a stockist for
this German product. Although now out of production a UK company called
MUTEK also made some fantastic preamps for 2 & 70 which had an RF
performance that others struggled to match. I would recommend any MUTEK
products without reservation if you can source them secondhand.

Jeez, whenever I post a similar question about things maybe being posted to the
wrong group, I get a response like "Who died and made you king?"

Actually, I have been wondering about a VHF/UHF preamp, but I'm capable of going
to the RIGHT group to read it. SO I wholeheartedly support your question.

Without a rule or two, Usenet would be total anarchy.

Oh, it is? That's cause AOL hooked up to the internet I think.
AOL was better when they sent you free diskettes. I haven't bought a 3.5"
floppy since.

Packet pretty much died here in the back woods of Michigan. So I've
been selling pieces of my packet set-up. I have FOR SALE, a
KANTRONICS PacketCommunicator 3 in beautiful shape. I have the AC
adapter, terminal to rig jumper and your standard TNC to computer
interface cable. Now since I used a dumb terminal, I never used a
computer/software set-up. And I can't tell you where I put the
original disk. BUT...there are TONS of packet software programs
available, some you can even download for free right off the internet.
I also have ALL the manuals for the little unit.

Anyway...enough rambling. ONLY $49 postpaid Priority U.S. Mail and
insurance to your front door. GREAT DEAL and FIRST e-mail gets it!

RADIO HABANA CUBA
DXERS UNLIMITED

WEEKEND EDITION
SATURDAY, MAY 4, 2002

By Arnie Coro CO2KK

Send your comments, questions and ideas to: arnie@radiohc.org

Hi, amigos radioaficionados all around the world! You are now listening to the weekend edition of your favorite radio hobby program, this is Dxers Unlimited, and I am Arnie Coro, radio amateur CO2KK, your host here in Havana ready to share with you all about seventeen minutes of all radio hobby related information....

Here is item one: Another upsurge in solar activity, and heliosismic data show that there are lots of sunspots on the farside of the Sun, so amigos, we may be seeing yet another solar rotation with a lot of activity!!!

Item two: Specialized amateur contests that do not disrupt your weekend with the family and friends are becoming more and more popular, for one very good reason: you enjoy the thrills of a real contest for a few hours, and then the rest of the weekend can be spent with your family. Not too long ago, a ham radio friend told me that the four- or six-hour-long contests do require a lot of skill, especially those that let you select the four- or six-hour operating period!!!

Item three: FM band Dxing is becoming more and more difficult all over the world due to the continuos increase of the number of low power local FM broadcast stations that are receiving licenses from the radio regulating authorities. Even a 10 watt local with a 6 dB gain antenna will make DX impossible on its own channel and at least on the first two adjacent channels, that depending on how close to your location the low power FM station is.

Nevertheless, dedicated FM broadcast band Dxers are learning some of the tricks that AM band DXers use, like waiting for off-the-air hours that station engineers need to do equipment maintenance... By the way, the FM broadcast band sporadic E DX season has just started, but so far, the openings are few and far apart from each other.

Item four: Homebrewing your radios is a lot of fun, and there is nothing like listening to DX with your homebuilt receiver, or like working DX with your amateur radio rig which you have just finished building. More about homebrew radios later here at the weekend edition of DXers Unlimited, amigos...

And, as always at the end of the show, be ready to copy Arnie Coro's Dxers Unlimited's exclusive and not copyrighted HF plus 6 meters propagation update and forecast. Margarita

Delgado is my sound engineer and producer at studio 7, this is Radio Havana Cuba....

Amigos, you are listening to the weekend edition of Dxers Unlimited, and here is our main feature for today: Arnie's advice about homebrewing your radio equipment. First things first... so don't attempt to start your homebrewing with a very sophisticated project, or without having the adequate tools at hand including, of course, your digital multi-meter!

You may perhaps want to start learning how to homebrew your radios by building one of the many kits now available, and as a matter of fact, that is an approach that I do recommend, because kits are an excellent way of learning about electronics.... Unfortunately some of the new generation kits are rather difficult to assemble due to the use of very small electronic components placed too tightly together, thus making your job of putting together the kit a lot harder. Here in Cuba, radio amateurs build a lot of their equipment, and something we all have learned is to homebrew our radios without any attempts to make them miniature sets!!!

Leaving enough space between the resistors, capacitors, integrated circuits, transistors, coils, crystals and other components has proven to be a very good idea, because it is a lot easier to put them together into something that will work, and also because when there is a breakdown, your homebrew set is a lot easier to repair...

Some Cuban amateurs have a second transceiver always ready for emergency communications, and that second radio is typically a version of the JAGUEY solid state double sideband transceiver, running anywhere from 3 to 10 watts, enough to communicate using a Near Vertical Incidence Skywave antenna system on the 80 and 40 meter bands... The homebrew JAGUEY is a quite straightforward design that allows you to upgrade the transceiver to a single side band set if you are able to obtain a single side band filter at a later date...

As a good friend likes to say, when you use a low power double sideband transceiver, no one realizes that you are also transmitting the unwanted sideband, as the other station's radio provides the filtering to pick up just the sideband in use on that specific band... In other words, if I am operating CO2KK with my JAGUEY on 40 meters, other stations using Single Side Band rigs will only pick up my lower sideband, as their transceivers will just chop away the upper side band when receiving....

Well, as you may realize, homebrewing a low cost double side band transceiver is not only a perfectly feasible project, but also one that will make your station ready to deal with communications emergencies, due to the fact that the JAGUEY needs just 12 volts from a battery to operate, and it draws very little current, even when transmitting. More about the JAGUEY and its most recent improvements in a few seconds, when Dxers Unlimited's weekend edition continues...

You are listening to Radio Havana Cuba, and amigos, if you happen to own a receiver capable of receiving single side band signals, try listening to our 11705 kiloHertz SSB broadcasts in English that start at 0100 UTC and last until 0500 UTC. Again our 11705 kiloHertz SSB is operating using upper sideband at reduced carrier, so that you can zero beat to the residual carrier for perfect reception... For those technically minded, we are running around 20 kiloWatts Peak Envelope Power, or PEP, with -12 dB carrier level, and the antenna is an array of dipoles beaming exactly North of Havana...

And now more about the JAGUEY double side band and CW single amateur band transceiver and its latest version... Among the most recent upgrades are the use of a triple tuned bandpass input filter and attenuator, which makes reception a lot better... Receiver incremental tuning, or RIT, was also added to the basic JAGUEY design, and the CW keying was improved

by using a PNP transistor with wave shaping to key the rig...

Also, the NEW JAGUEY has an optional pair of audio filters, one for SSB and the other one for CW, so that the operator may switch from one to the other as required. The NEW JAGUEY also uses a simple but effective transmitter audio compressor that improves the punch of the signal quite a bit. And last but not least, some of the local enthusiasts have now built a very low-cost linear amplifier that uses recycled vacuum tubes to increase the output power of the JAGUEY to anywhere between 20 and 50 Watts...

One very interesting feature of the NEW JAGUEY is that once the newcomer to the amateur radio hobby finds a single sideband filter, the NEW JAGUEY can be readily adapted to be the "tail end" of a single sideband transceiver, so not even one component is lost from the original project. AH, and before I forget, the NEW JAGUEY is a very, very, flexible design because, for example, the receiver audio can be implemented with no less than three different circuits, a straightforward three transistor single ended audio amplifier, a more sophisticated push pull design using discrete components as the first one just mentioned, and the classic JAGUEY receiver audio module that uses a low noise audio transistor coupled to an integrated circuit audio amplifier, the TBA810 or A210 that happens to be plentiful here in Cuba...

Si amigos, yes my friends, oui mes amis... Homebrewing your radio gear is a lot of fun, and when propagation conditions are not good, then you just plug in the soldering iron, and start building your next project... By the way, I am working now on the NEW JAGUEY PROJECT circuit diagram and operating manual, and as soon as they are both ready, they will be posted at our Dxers Unlimited website for you to download....

One of the outstading features of this unique radio amateur transceiver is the fact that I have included a complete list of parts with sets of values that can be used without the circuit suffering from any degradation.... In other words, you may find right next to each component -- be it a resistor, capacitor, transistor or IC -- a number of options that you can use, making construction a lot easier... As many of you who already have built electronic equipment know very well, the lack of a specific value resistor, for example, can bring the whole project to a standstill, so is was why I spend a lot of time testing each NEW JAGUEY module to learn how the parts values could be changed around without degrading the performance of the transceiver!!!

The NEW JAGUEY receiver chain uses a switched three, four or five position RF input attenuator, followed by a two or three tuned circuit band pass filter, feeding a grounded base or grounded gate RF amplifier stage, that delivers its signal to a double balanced mixer acting as a product detector... audio from the product detector is fed to a low noise audio preamplifier that in turn feeds one of the two audio filters, which in turn feed the audio power amplifier module... The VFO is a very straightforward three transistor module, of which there are three different versions that you can choose from, depending on the parts that you have available. As a matter of fact, newcomers to the amateur radio hobby may build just the receiver part of the NEW JAGUEY and start listening to the 80 or 40 meter bands to pick up CW practice, and then after they obtain their license, they can build the transmitter module!

I'll tell you more about the NEW JAGUEY in our upcoming mid-week edition of Dxers Unlimited next Tuesday and Wednesday UTC days, when I will describe the transmitter chain of the NEW JAGUEY, the Cuban-designed, low-cost double sideband and CW transceiver....

And now, amigos, as always at the end of the show, here is Arnie Coro's Dxers Unlimited's HF plus 6 meters propagation update and forecast:

Solar activity is MOVING UP AGAIN, and both the number of sunspots and solar microwave flux are increasing... Heliosismic data show that we will have from a week to ten more days of higher activity, and don't be surprised if yet another big solar flare erupts during the next few days.

We all hope that the summer sporadic E season will finally take off, too. The best band for amateur radio Dxing during the local daylight hours should be 15 meters, while nightime DX on 20 meters is going to be plentiful for the rest of the summer...

Send your signal reports and comments to arnie@radiohc.org and VIA AIRMAIL to Arnie Coro, Radio Havana Cuba, Havana, Cuba

RADIO HABANA CUBA
DXERS UNLIMITED

WEEKEND EDITION
SATURDAY, APRIL 27, 2002

By Arnie Coro CO2KK

Send your comments, questions and ideas to: arnie@radiohc.org

Hi, amigos radioaficionados around the world! Nice to have you all listening to radio hobby program coming to you from Havana. I am Arnie Coro, radio amateur CO2KK, and as always it is my pleasure to share with you about seventeen minutes of all radio hobby related information!

Item one: Solar update: After a very active last week, now the sun seems to be taking a rest, and the daily sunspot numbers and solar flux have taken a nose dive. At the same time we are enjoying a period of very quiet geomagnetic activity, quite a change from the past two weeks...

Item two: One of the most fascinating ways of enjoying our wonderful hobby is .... YES, one of the most wonderful way of playing with our radios is to organize a DX expedition... go to a remote location, install your radio equipment, have yourself a nice time and make a lot of ham radio operators around the world very happy too when you give them the opportunity to work a new country, or in the case of VHF-UHF and Microwaves a new Grid Square...

Today I have here with me at RHC studio 7 an amateur radio operator from the United States, his name is Frank Smith and the world knows him for organizing some very interesting amateur radio DX expeditions...

Frank will answer my questions about this very interesting topic so that many of you will perhaps start thinking about organizing your own Dx expedition soon!!! And as always, at the end of the show, I will provide you with the most up to date HF plus 6 meters propagation forecast... Margarita Delgado is my sound engineer and producer, I am Arnie Coro in Havana back with you all in a few seconds....

You are tuned to Radio Havana Cuba, and this is Dxers Unlimited's weekend edition... today with a special interview to Frank Smith, an American radio amateur visiting Cuba... Frank, let's start talking amigo...

[The live on-air conversation is not available in this transcript. Please contact Arnie at arnie@radiohc.org for more information. -- NY Transfer]

I'm just questioning why the thread is going to five groups. There is
another thread going on 150 posts that does not belong in this group
with the same five groups. RRS is already pretty active and including
threads from a group like rec.radio.amateur.antenna where threads run a
few hundred posts is just going to cause problems.

I case you have not paid attention groups that are very active have
shorter retention so including posts by cross posting from another group
causes posts to this group to expire faster. Posts I want to read. If I
want to read 150 posts on the oil used in dummy loads I will go read
rec.radio.amateur.antenna.

Now that I have completed my collection of HR magazines I am selling off the spares that I have. I still need some HR binders (both sizes).

The magazines are in good to very good shape. Send me your list and I'll let you know what I can fill. Prices are $2/ea for the small format and $1/ea for the larger format. Prices do not include shipping.

If you need a total, give me your zip code and I'll check postal book rate shipment from 72227 to you.

Best 73,
Rick WB5FDP

Where can I find the 'Mutek' modifications for my Yaesu 736r and what are
they?
Where can I send this radio to get it 'tuned-up' and do all the necessary
modifications to make it a better rig?
What are the best modifications this radio needs?
What about filters and accessories?

5986. Harris ATU - RF3281 for sale

Harris RF3281 ATU designed for use with the Harris RF3200 HF Transceiver
1.6Mhz - 32Mhz tuning range, will take 125W power (this is the output of the RF3200).
Used, no sign of water ingress internally and in excellent condition externally.
I do not have the rig to test it and I have no manual for the unit.
Have a look at these 2 pictures.
http://www.g1gyc.demon.co.uk/Sales/Harris%20ATU%201.jpg
http://www.g1gyc.demon.co.uk/Sales/Harris%20ATU%202.jpg

I am looking for 100GBP + shipping - I will haggle / barter
I will ship world wide at cost.

I will accept payment in GBP, Euro, or USD

Thanks for looking
Martin

Mouser, DigiKey, and most small electronic parts stores stock them. There are several hobbyist shops in SD that stock this sort of thing. I've been in them with friends, but can't recall names or locations. You get some more local guidance.

It should be quite possible for the software developer to use one pin of a serial port (say RTS) to key the PTT line and another (say DTR) to key the CW line. This way you still only need one serial port.

At lease some of the current sound card programs key an output tone when put into the rigs mike input (in USB or LSB mode) generates a CW signal. The output is more likely to be clean however if the rig's CW line was keyed in the normal CW mode.

> Send your comments, questions and ideas to: arnie@radiohc.org
>
> Hi, amigos radioaficionados all around the world! You are now listening to
the weekend edition of your favorite radio hobby program, this is Dxers
Unlimited, and I am Arnie Coro, radio amateur CO2KK, your host here in
Havana ready to share with you all about seventeen minutes of all radio
hobby related information....
>
> Here is item one: Another upsurge in solar activity, and heliosismic data
show that there are lots of sunspots on the farside of the Sun, so amigos,
we may be seeing yet another solar rotation with a lot of activity!!!
>
> Item two: Specialized amateur contests that do not disrupt your weekend
with the family and friends are becoming more and more popular, for one very
good reason: you enjoy the thrills of a real contest for a few hours, and
then the rest of the weekend can be spent with your family. Not too long
ago, a ham radio friend told me that the four- or six-hour-long contests do
require a lot of skill, especially those that let you select the four- or
six-hour operating period!!!
>
> Item three: FM band Dxing is becoming more and more difficult all over the
world due to the continuos increase of the number of low power local FM
broadcast stations that are receiving licenses from the radio regulating
authorities. Even a 10 watt local with a 6 dB gain antenna will make DX
impossible on its own channel and at least on the first two adjacent
channels, that depending on how close to your location the low power FM
station is.
>
> Nevertheless, dedicated FM broadcast band Dxers are learning some of the
tricks that AM band DXers use, like waiting for off-the-air hours that
station engineers need to do equipment maintenance... By the way, the FM

broadcast band sporadic E DX season has just started, but so far, the openings are few and far apart from each other.
>
> Item four: Homebrewing your radios is a lot of fun, and there is nothing like listening to DX with your homebuilt receiver, or like working DX with your amateur radio rig which you have just finished building. More about homebrew radios later here at the weekend edition of DXers Unlimited, amigos...
>
> And, as always at the end of the show, be ready to copy Arnie Coro's Dxers Unlimited's exclusive and not copyrighted HF plus 6 meters propagation update and forecast. Margarita Delgado is my sound engineer and producer at studio 7, this is Radio Havana Cuba....
>
> Amigos, you are listening to the weekend edition of Dxers Unlimited, and here is our main feature for today: Arnie's advice about homebrewing your radio equipment. First things first... so don't attempt to start your homebrewing with a very sophisticated project, or without having the adequate tools at hand including, of course, your digital multi-meter!
>
> You may perhaps want to start learning how to homebrew your radios by building one of the many kits now available, and as a matter of fact, that is an approach that I do recommend, because kits are an excellent way of learning about electronics.... Unfortunately some of the new generation kits are rather difficult to assemble due to the use of very small electronic components placed too tightly together, thus making your job of putting together the kit a lot harder. Here in Cuba, radio amateurs build a lot of their equipment, and something we all have learned is to homebrew our radios without any attempts to make them miniature sets!!!
>
> Leaving enough space between the resistors, capacitors, integrated circuits, transistors, coils, crystals and other components has proven to be a very good idea, because it is a lot easier to put them together into something that will work, and also because when there is a breakdown, your homebrew set is a lot easier to repair...
>
> Some Cuban amateurs have a second transceiver always ready for emergency communications, and that second radio is typically a version of the JAGUEY solid state double sideband transceiver, running anywhere from 3 to 10 watts, enough to communicate using a Near Vertical Incidence Skywave antenna system on the 80 and 40 meter bands... The homebrew JAGUEY is a quite straightforward design that allows you to upgrade the transceiver to a single side band set if you are able to obtain a single side band filter at a later date...
>
> As a good friend likes to say, when you use a low power double sideband transceiver, no one realizes that you are also transmitting the unwanted sideband, as the other station's radio provides the filtering to pick up just the sideband in use on that specific band... In other words, if I am operating CO2KK with my JAGUEY on 40 meters, other stations using Single

Side Band rigs will only pick up my lower sideband, as their transceivers will just chop away the upper side band when receiving....
>
> Well, as you may realize, homebrewing a low cost double side band transceiver is not only a perfectly feasible project, but also one that will make your station ready to deal with communications emergencies, due to the fact that the JAGUEY needs just 12 volts from a battery to operate, and it draws very little current, even when transmitting. More about the JAGUEY and its most recent improvements in a few seconds, when Dxers Unlimited's weekend edition continues...
>
> You are listening to Radio Havana Cuba, and amigos, if you happen to own a receiver capable of receiving single side band signals, try listening to our 11705 kiloHertz SSB broadcasts in English that start at 0100 UTC and last until 0500 UTC. Again our 11705 kiloHertz SSB is operating using upper sideband at reduced carrier, so that you can zero beat to the residual carrier for perfect reception... For those technically minded, we are running around 20 kiloWatts Peak Envelope Power, or PEP, with -12 dB carrier level, and the antenna is an array of dipoles beaming exactly North of Havana...
>
> And now more about the JAGUEY double side band and CW single amateur band transceiver and its latest version... Among the most recent upgrades are the use of a triple tuned bandpass input filter and attenuator, which makes reception a lot better... Receiver incremental tuning, or RIT, was also added to the basic JAGUEY design, and the CW keying was improved by using a PNP transistor with wave shaping to key the rig...
>
> Also, the NEW JAGUEY has an optional pair of audio filters, one for SSB and the other one for CW, so that the operator may switch from one to the other as required. The NEW JAGUEY also uses a simple but effective transmitter audio compressor that improves the punch of the signal quite a bit. And last but not least, some of the local enthusiasts have now built a very low-cost linear amplifier that uses recycled vacuum tubes to increase the output power of the JAGUEY to anywhere between 20 and 50 Watts...
>
> One very interesting feature of the NEW JAGUEY is that once the newcomer to the amateur radio hobby finds a single sideband filter, the NEW JAGUEY can be readily adapted to be the "tail end" of a single sideband transceiver, so not even one component is lost from the original project. AH, and before I forget, the NEW JAGUEY is a very, very, flexible design because, for example, the receiver audio can be implemented with no less than three different circuits, a straightforward three transistor single ended audio amplifier, a more sophisticated push pull design using discrete components as the first one just mentioned, and the classic JAGUEY receiver audio module that uses a low noise audio transistor coupled to an integrated circuit audio amplifier, the TBA810 or A210 that happens to be plentiful here in Cuba...
>
> Si amigos, yes my friends, oui mes amis... Homebrewing your radio gear is

a lot of fun, and when propagation conditions are not good, then you just plug in the soldering iron, and start building your next project... By the way, I am working now on the NEW JAGUEY PROJECT circuit diagram and operating manual, and as soon as they are both ready, they will be posted at our Dxers Unlimited website for you to download....
>
> One of the outstading features of this unique radio amateur transceiver is the fact that I have included a complete list of parts with sets of values that can be used without the circuit suffering from any degradation.... In other words, you may find right next to each component -- be it a resistor, capacitor, transistor or IC -- a number of options that you can use, making construction a lot easier... As many of you who already have built electronic equipment know very well, the lack of a specific value resistor, for example, can bring the whole project to a standstill, so is was why I spend a lot of time testing each NEW JAGUEY module to learn how the parts values could be changed around without degrading the performance of the transceiver!!!
>
> The NEW JAGUEY receiver chain uses a switched three, four or five position RF input attenuator, followed by a two or three tuned circuit band pass filter, feeding a grounded base or grounded gate RF amplifier stage, that delivers its signal to a double balanced mixer acting as a product detector... audio from the product detector is fed to a low noise audio preamplifier that in turn feeds one of the two audio filters, which in turn feed the audio power amplifier module... The VFO is a very straightforward three transistor module, of which there are three different versions that you can choose from, depending on the parts that you have available. As a matter of fact, newcomers to the amateur radio hobby may build just the receiver part of the NEW JAGUEY and start listening to the 80 or 40 meter bands to pick up CW practice, and then after they obtain their license, they can build the transmitter module!
>
> I'll tell you more about the NEW JAGUEY in our upcoming mid-week edition of Dxers Unlimited next Tuesday and Wednesday UTC days, when I will describe the transmitter chain of the NEW JAGUEY, the Cuban-designed, low-cost double sideband and CW transceiver....
>
> And now, amigos, as always at the end of the show, here is Arnie Coro's Dxers Unlimited's HF plus 6 meters propagation update and forecast:
>
> Solar activity is MOVING UP AGAIN, and both the number of sunspots and solar microwave flux are increasing... Heliosismic data show that we will have from a week to ten more days of higher activity, and don't be surprised if yet another big solar flare erupts during the next few days.
>
> We all hope that the summer sporadic E season will finally take off, too. The best band for amateur radio Dxing during the local daylight hours should be 15 meters, while nightime DX on 20 meters is going to be plentiful for the rest of the summer...

Both of the OPC-118 and OPC-137 cables are out of production. You will need to make your own cable. While I was at Icom I wrote a sheet that describes just how to make such a cable. Contact Icom America's tech support department and ask them for a copy.

Source record: 43607

For Sale:

1 each ICOM IC-T81A 50/144/430/1200 MHz handheld FM transceiver and 1 each additional BP200 battery. Package contains original accessories i.e. factory rubber ducky, operators manual, wall charger and total of two BP200s, both with belt clips. The radio is only a few months old and excess to my needs. It is in like-new (9.9 out of 10) condition (I don't abuse my stuff) and works perfectly. Material is located in St. Mary's County, Maryland.

Yours for only $255.00, pickup or shipped to your door (U.S. address) via Priority U.S. Mail.

Regards -

>
Not very common in handhelds these days; until I looked up that model
I would have said never. Make sure you can still get everything you
need for remote mounting, as this is a discontinued unit.

Many current mobile rigs have the remote face option, with a several
foot cord, to allow mounting even in the trunk or something. Some are
barely larger than an HT, but put out 50W and have more useful
features for a mobile installation. They put more functions into the
mike than an HT, too.

I think most would agree that you will get better performance at 50W
from a rig designed for it than with an HT plus an amp.

I think most of the newer wide range receive rigs with UHF will listen
in on FRS. You need to include the range of 462.5625 through 467.7225.

Happy trails,
Gary (net.yogi.bear)

>>

Hi, Raymond....was just adding that one of the cheap CW practice keyers would allow him to do just that....so many folks today couldn't whip up a circuit to save their lives, hihi. That would create the audio tone as suggested....tho I'd probably breadboard up a circuit to dump audio into the mike connector, with the CW practice rig all he has to do is key the HT.

Cheers;
A

6014. FS: Texas Instruments 320C26 DSP Starter Kits

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-13 03:30:21 UTC
From: "Tony D." <apd@net.bluemoon.net>
Message-ID: <3CDF6002.A1B8F638@net.bluemoon.net>
Source record: 43619

I have two TI 320C26 DSP starter kits for sale. Both were working the last time they were used which was about 5 years ago. Both kits are complete, in their original boxes with all original documentation. The original software is on high density 5.25" diskettes, and I also included a copy on a 3.5" diskette.

The kits require a 9Vac wall transformer and a serial cable which were not included in the original kits. Both kits are being sold AS IS, although they were working when last used. I don't have serial cables or power transformers to test them.

These kits were used in several articles in QEX during the mid-'90s for various HF modem applications and CW filters. There are a number of Ham related applications for free download from various sites, as well as more general purpose applications such as audio spectrum analyzers and such from the TI website.

Here are a couple of URLs for software:

http://www-k.ext.ti.com/sc/technical-support/tools/dsp/ftp/c2x.htm

ftp://ftp.funet.fi/pub/ham/dsp/320C26/

ftp://ftp.funet.fi/pub/ham/dsp/ (especially the dskmodem)

The price is $35 each shipped anywhere in the USA. Email me if you have any questions at apd@net.bluemoon.net

Tony

6015. Transistors for Yaesu FT-301 10W final and driver needed!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-13 03:53:49 UTC
From: Michael Pupeza <mpupeza@sympatico.ca>
Message-ID: <B904B10D.1CBF%mpupeza@sympatico.ca>
Source record: 43620
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Hi;
I'm heading to Dayton this week and want to pick up some parts.
My Yaesu FT-301 (Low power) has dropped it's output from 13-15W, down to 2-4W.
I suspect the driver (2SC1589), or 1 (or both) of the S10-12 Finals.
I doubt that the driver will be hard to find under that number, but the S10-12s may be a challenge.
What Motorola, or other Big Brand, might be a substitute?
These are the white ceramic circle with 4 fan flanges, and 2 screw hole tabs at a 45 degree angle to the flanges. A fairly common style, I believe.
Their Output Rating in SSB would probably be 15 - 20 Watts each, with a gain of 10-15 dB, I would guess, on 12V up to 30 MHz.

Any help would be appreciated.
Thanks
73

6016. Uniden HR 2600 10 meter amatuer radio

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-13 04:13:13 UTC
From: Mark <grandmhg@gocougs.wsu.edu>
Message-ID: <udufdke55tn383@corp.supernews.com>
Source record: 43621

This is a Uniden HR 2600 Ham Radio. It has had the microprocessor replaced and now works on 10 and 12 meters. You must have a valid amateur radio operator license to use this radio. Please email me for information on modifications. I recently had the final transistors replaced by a professional technician. He also tuned it up and made sure it was in good operating condition. It puts out a solid 10 watts on AM and FM and around 40 watts on sideband.

It will transmit and receive from 10 to 12 meters on CW, USB, LSB, AM, and FM. There are 4 separate bands with memories and will do split operation for 10 meter FM repeater operation.

Comes with the original hand microphone (UP/DOWN) in good shape, DC power cord, original operating manual and ChipSwitch manual.

Disclaimer: A previous owner has installed ? inch high "legs" on the front edge of the bottom of the radio. Please email for photos. Also, The original connector in the back has been altered by adding a toggle switch for internal/accessory speaker and RCA jacks. There is no mobile mounting bracket. Due to the type of equipment and age, it is being sold "AS IS".

Price is $250

Buyer pays actual shipping and insurance if desired. (I will not be liable for damages if the item is not insured.)

I accept Pay-Pal or money orders only. Please email me for additional info or photos.

Mark, KF7JA

This is a Uniden HR 2600 Ham Radio. It has had the microprocessor replaced and now works on 10 and 12 meters. You must have a valid amateur radio operator license to use this radio. Please email me for information on modifications. I recently had the final transistors replaced by a professional technician. He also tuned it up and made sure it was in good operating condition. It puts out a solid 10 watts on AM and FM and around 40 watts on sideband.

It will transmit and receive from 10 to 12 meters on CW, USB, LSB, AM, and FM. There are 4 separate bands with memories and will do split operation for 10 meter FM repeater operation.

Comes with the original hand microphone (UP/DOWN) in good shape, DC power cord, original operating manual and ChipSwitch manual.

Disclaimer: A previous owner has installed ? inch high "legs" on the front edge of the bottom of the radio. Please email for photos. Also, The original connector in the back has been altered by adding a toggle switch for internal/accessory speaker and RCA jacks. There is no mobile mounting bracket. Due to the type of equipment and age, it is being sold "AS IS".

Price is $250

Buyer pays actual shipping and insurance if desired. (I will not be liable for damages if the item is not insured.)

I accept Pay-Pal or money orders only. Please email me for additional info or photos.

Mark, KF7JA

Or utilize a program like Numorse, and either wire the computer sound card output to the mic circuit or hold the microphone near the PC speaker to get MCW. It is a way that is not perfect but will work.

Dear All,

I have a battery charger (Uniden APX 116) which charges Uniden APX550 and APX1050 batteries. I want to modify it so that it would charge UH056 CB batteries. Does anyone has the internal circuit diagram for the APX550/1050 batteries? I need this information for modifications. I have contacted Uniden. Their reply is that Uniden does not have this information.

Regards,

Sam Yang

My Yaesu G-450XL Rotor got exposed to way too much RF
and now, the red OVERLAP light is on all the time
and the rotor doesn't turn.

Anyone know which component(s) to replace?

Please email the details to wd1v@amsat.org

Thanks es 73!

I don't think such a critter as you describe exists.

You'd be better off with a 50-watt mobile radio that has three basic components. A radio body you could stash anywhere -- under your seat, whatever. A detachable faceplate you could velcro to your dash somewhere -- you'll need to be able to see it to know what frequency you're on. And a full-featured, lighted microphone that has all the buttons on it to operate your radio and change frequency.

See the web sites for Icom, Yaesu, Alinco and Kenwood. All their rigs are there.

I agree with Bob, et al. I tried a Handy + ampl rig and gave it up for
mobile use because modern handy's are so small and have so many features
packed onto so few controls that the feature that any one button or knob
controls depends on what you did last and how long you held it down.
Wanna switch bands? Hold the BAND button a 1/4 second too long and
you're in some unwanted scan mode! Worse, you'll wreck trying to get out
of it!! (And then we cuss cell phone users). Get a mobile with big
simple controls & displays, preferrably on a mike that can be held up
to look at vs taking your attention off that semi bearing down on you.

I use a Kenwood TM-G707A with a detatchable face. The main part of the radio sits under the passenger side seat and the head is on the dash. The mic cable goes under the pass. side seat as well. This is a dualband model and might not be what the original poster is looking for, but it's one to consider. With it's large and bright display with alpha numeric labeling, this is a nice choice for a "low profile" mobile rig. The head is small enough to go almost anywhere in your dash.

6041. FT990 and optional filters

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-13 22:01:39 UTC
From: cprstn54zz@att.net
Message-ID: <3ce03627.24968281@news-server.optonline.net>
Source record: 43647

Can someone who has an FT990 with optional filters tell me whether
they engage in all modes or only in selected modes?

E.g., will the XF-109C 500 Hz CW filter also engage when the mode is
set to SSB? Packet? RTTY?

I ask this seemingly silly question because the various PC sound card
programs appear to simulate CW and the data modes by sending in SSB.
If my FT990 has to be set to SSB to send, I would assume it will be
receiving on SSB as well. That being the case, it would be nice if
the 500 and 250 CW Hz filters in the IF could be used in SSB.

I was wondering if the interface I built to control my FT900 will work with my VX150. Basically a TTL - RS232 convertor, but it looks like the VX150 only uses one serial line, where the FT900 uses two. The circuit I built can be found on eham.net under FT840 CAT interface.

Thanks for any help,

Max.

I'm just hoping the existing one can be used so I don't have to build another one.

hi,

my friend accidentally programmed a Motorola GP300 VHF fullkeypad 5tone with a codeplug of a GP300 VHF PL :-(

When I turn on the GP300, only an orange led blinks near the volume knob.

However, when I connect the GP300 to the ribbox, I can read the radio and extract the codeplug, see the frequencies etc.

What can I do to bring the GP300 back to life? Do you have a codeplug for a Motorola GP300 VHF full keypad 5tone? Is that an adequate solution?

Any help is highly appreciated.

Please post in this newsgroup and send CC to scanweb@planet.nl

thanks and kind regards,

Marcel

IG-42 Heathkit RF Generator, Laboratory Type - Ebay

Model IG-42 RF Generator, includes manual. The operating range is 100 KHZ to 31 MHZ. I bought this at the Dayton Hamvention a few years ago, but haven't used it very much. I checked its operation on all bands, and verified the output using radio receivers (calibration appears to be very good). The modulation and attenuation controls were also verified to work. Although all functions appear to work normally, I'm selling the unit as-is (I have no way of verifying performance to lab specifications). Cosmetically, it is also very good.

For auction on Ebay, click on:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1351330143&ssPageName=ADME:B:LC:US:1

I will be glad to provide additional information. Contact me at w4tq@mindspring.com

6069. MFJ 422 and 1272B schematics needed

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-15 00:09:51 UTC
From: woodhull@wilde.oit.umass.edu
Message-ID: <3ce1993f$1@oit.umass.edu>
Source record: 43572

I have two MFJ units I bought from other hams recently for which I
don't have the schematics. Can anyone help me? the units are:

MFJ-1272B TNC/microphone switch
MFJ-422 Electronic keyer

I realize these are simple units for which I can prtobably reconstruct
the schematic fairly easily, but I'd like to get a copy of the original.
And yes, I know that manuals for just about all MFJ products are
available on their web page as PDF files, but for these two, at least,
the PDF manual doesn't have a schematic.

Thanks in advance,

Al, N1AW

NuMorse can do better than that (under W95 or W98 but not NT or XP or
W2k)It has an output to port feature. Hook a keyer input to the
selected port and drive your transceiver direct from text files on
your PC, or from your PC keyboard via NuMorse. Several people are
using Numorse to drive transmitters broadcasting slow morse
transmissions. A training school run by the German Navy are running a
semaphore lamp from NuMorse using the same feature. Email me if you
need more details.

6072. FS Singer FM-10 Service Monitor

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-15 01:20:17 UTC
From: John Klewer <jklewer@directvinternet.com>
Message-ID: <3CE1B7D1.9020607@directvinternet.com>
Source record: 43578
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,sci.electronics.equipment

Singer FM-10 synthesized service monitor covers up to 500 MHz, includes manual copy, ODM-1 deviation oscilloscope module, does signal generation via front panel decade frequency set knobs, has audio monitor mode and oscilloscope.

The instrument is fully functional with the following caveat:

The deviation scope function needs the switches/pots cleaned and probably adjustments made as well....the dev scope works and indicates modulation.

This is a fine service monitor, it is small and lightweight and performs several functions useful on the home test bench.

Unit will operate on 117V or 12V (though I have never tried it on 12 V DC).

Asking $350.00 plus shipping

Thanks for all the replies. I'm not sure what I am going to do yet.
I don't think I want to spend $300 for a radio. And an older, cheaper
dual band mobile won't have a remote head. I think I will just use my
2M HT for now, and also keep a real FRS unit in the car to monitor
those freqs. I also have an ADI 2M mobile, but the tone decoder went
out on it, and I don't know where I'd mount it...

This is the 6 M AM transceiver spotlighted by the IA QRP club a year or so ago. This is a rig designed by Rick Littlefield originally called the Nor'easter and published in Communications Quarterly. I have the board, the pots, a used CB modulation transformer, the modulator chip, the crystal filter (the good one), and the coil form. I am also including all documentation, addendums (some items in color), and a copy of the original article. I'll sell it for $20 shipped priority mail (lower 48). This is a really neat project. I've just never had the gumption to get it finished.

6077. Parts or repair needed: MSF 5000

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-15 03:26:33 UTC
From: Michael Robinson <michael@frii.com>
Message-ID: <3CE1D573.5080305@frii.com>
Source record: 43582

We've got an MSF 5000 UHF repeater.
Recently one of the boards started blowing fuses.
This board seems to be unusual: TRN5178A
I can find little information about it.

This board accompanies a WildCard board that is
connected to our SCOM 7K. These two boards sit
in a tray above the control tray. My manual doesn't
show this tray nor list the board number.

What do these boards do?
Does anyone repair these boards?
Is there a source where I might buy a replacement?

Any help is greatly appreciated

6082. Antenna MADE for AO-40!!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-15 06:18:25 UTC
From: Glenn Rollins <seemywebsite@n3iyr.com>
Message-ID: <jdv3eu898eqrin8dh4l3f6r0svidt6furn@4ax.com>
Source record: 43587

I got tired of straining to hear signals from AO-40 with my barbecue grill dish and developed a circular polarized antenna that WORKS! I talked a manufacturer into producing a small amount of specialized waterproof helical feeds and I am now making this antenna available to the amateur radio community. Available in two sizes, 2 foot and 3 foot with TRUE circular gain. Easily connected to a crossboom, it is an offset parabolic and there is NO aperture blockage of the incoming signal. Plus, you can connect your downconverter or preamp directly to the feed with no signal loss. I have current stock and have mastered my shipping methods. Please visit my web site and look my antenna over. These antennas may be available only for a limited time due to the difficulty in ordering small quantities, international shipping, and the limited time I have to spend on this project. Any comments are welcomed.

Source record: 43590

No! A transmitter must have type acceptance for use in the marine band. The converse of course is totally legal, i.e. modify a marine transmitter for use in the ham bands.

Years ago, I used a Yeasu 757 in an aircraft for a transatlantic flight. I got a bunch of grief over it, and was only saved by the fact I had made radio checks with Gandor prior to landing. While not legal, they did look the other way.

This was a case of a single trip not justifying the installation of a pricey HF aircraft radio.

Will it convert to 2M ?
Most band 3 sets wont
and you'll have to lose the trunking control of the PLL

Should do fine. I wouldn't overdrive the input though. A transformer isn't needed. At least I don't use one, and it works fine.

Don't worry about matching the impedance. When you have a source such as a 8 ohm speaker and are feeding into a sound card with an input impedance that is way over 10 times higher there is no loading and not much distortion. You just have to have enough driving power which the sound card has plenty of. Same as for the input to the transmitter. You may have much more drive than needed and you may need to insert about a 10K to 100k resistor in series with the wire comming from the audio card and then put a 1 K resistor to ground to cut out some of the drive.

MOTOROLA GP300 VHF W/ EXTRAS - NO RESERVE

You are bidding on one, Motorola, GP300, 8 channel, 5 Watt, VHF portable radio. It is model # P93YPC20D2AA. The radio is used, but has been re-housed and checked by a local Motorola Authorized Service Center to meet all factory specs. Included in the auction is one Motorola Speaker Mic, HMN9030A, in perfect condition. Also included, but not pictured, is one, single-unit, slow charger - BRAND-NEW IN THE BOX!!! The battery is Intrinsically Safe, in excellent condition (according to the Alexander Battery Analyzer), with a year 2000 date code. I prefer PayPal, but will accept Billpoint, Money Orders, and Cashiers Checks. NO Personal Checks. Please feel free to e-mail me with any questions. Winner must contact me within 24 hours of auction close. Good luck and thanks for looking!

Greetings,

I have responsibility for the disaster plan for our
congregation. Some of the members will get Amateur
Radio Licenses and then HTs and Mobil rigs. What
Brands or models will best survive lack of care?

So far, ICOM has the best recommendations.
I would like to hear how rigs worked in
wet cold (not freezing) weather and
very dry summer heat (100 degree F and more).
Also, about rigs that new amateurs find
easy to quickly master.

Sincerely,
Bill Thomas

6107. Need source for OKI MSM5502 IC

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-16 04:00:22 UTC
From: "P.Thamm" <wb4lze@cavtel.net>
Message-ID: <q9GE8.4079$Yg7.662859@bin4.nnrp.aus1.giganews.com>
Source record: 43512
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Does anyone know of a source for the OKI MSM5502 Counter IC ? It was used in the digital frequency display of several Kenwood Transceivers and scanners in the late 1970's. It is a 14 pin DIP and was made by OKI as late as 1996. I have tried all the sources I could think of with no luck. US Bid shows them in various quantities but their minimum bid is $250 which is more than the equipment is worth.
Any help would be appreciated.
Best regards, Peter

Receiving is no problem. Use the speaker out from the rig to the "line in" on the sound card. You can adjust the volume withing the computer. Also you can adjust the volume from the rig. To the rig, the main thing is to just not overdrive the mike input, and I always check the polarity. I want the ground side on the computer card going to the ground side on the rig. On the 706 I've been using I rigged up a set of resisters and a pot to adjust the level. I can also adjust within windows also. I might add... If your card only has a "mike" input and no line input, you may need to lower the gain to the sound card. A "mike in" is more sensitive than a "line in". But most all cards made in the last few years have a line in. MK

6109. Kenwood TS50 2 ATU50 protocol wanted!

Message-ID: <3CE3562D.E682892A@dlr.de>
Source record: 43514

Hi Hams,

I'm looking for the TS50 to ATU50 handshake protocol
to control a stepper motor for a magloop antenna.
The stepper logic should get the band info from the ts50
to tune the cap to the rigth position.
Finetuning would by done manually.
Is someone fimilar with this topic, or has the opportunity
to scan the connection between both devices by a logicanalyzer?
What is the starting pattern, when pushing the att button at the
TS50?

Many thanks in advance.

Markus

If these fine church folks are actually going to get amateur licenses, then you shouldn't be too worred about whether the equipment will "survive lack of care" and be "easy to quickly master." Just get 'em licensed, and then go from there. Equipment reviews are available at http://www.arrl.org

If you're really dealing with folks that won't care for their equipment, or folks who cannot figure it out, then there's plenty of good stuff for the cb and family service bands.

1) You can order a couple free from maxim's website.

2) A more modern pin-equivalent device would be the MAX202 - which
can use smaller (0.1uF) charge pump capacitors - then you don't have
to worry about inserting them with incorrect polarity.
Now for a shameless plug :
You could also use the Analog Devices ADM202 equivalent.
Again , you can order 2-off free from the website (www.analog.com)

Geoffrey Okamoto wrote:

> 1) Is ham radio the same as amateur radio?

It really depends on your legislation locally, if your legislation establishes a difference then they're different. In most of the world I guess there's really no difference between the two, they're both experimental radio transmissions done by amateurs with no commercial purposes.

> 2) Are amateur radios able to listen and transmit on all known frequencies?
> If not, which ones.

If by frequencies you mean bands, yes, we're allowed to transmit on most bands. If you mean specific frequencies, no... we're not allowed to transmit anywhere we want. Amateur services have certain ranges within the bands to which you must conform.

> 3) Which frequencies are which bands? (i.e. citizen band, commercial band,
> frs, etc)

Citizen's band is 26.965 through 27.405 MHz, divided into 40 channels of around 10 KHz each.
Commercial ranges, government ranges and such vary from country to country.
Amateur ranges are basically the same worldwide, but they're a bit too many to list here :) Check your local amateur radio legislation.

> 4) What radio can work on all bands?

There's some newer Kenwood and Icom models which can work 160-10 meters plus VHF/UHF, and I believe the TS-2000 does packet.

But then you'd probably have to cut 'em off and make a splice somewhere
along your cable, which generally means an ugly splotch of tape.

Given that DINs go for a couple cents each, it's not a whole lot of
trouble to go to your local electronics store and buy them new.

>It appears that the interfaces do not have the capability of keying
>CW, yet the various PC programs all say they can do CW TX.

Well, after much back and forth in this rather foggy area, I have
learned a few things.

(1) BUX Comm has some unlisted configurations of the Rascal Interface
that will key CW directly (using DTR). Also, you have to know exactly
what you need when you order from "Buck," because he is very, very
busy cranking out his Rascals.

(2) At least one well-received program, MixW, will key CW using the
RTS pin, meaning that QSK is preserved.
http://www.mixw.net/hardcon.htm

(3) MixW -- and perhaps others -- expect your CAT signals to be on the
same COM port as PTT and CW-KEY. Inasmuch as the Rascal does not do
CAT, I think a cable splitter and some bench time is necessary to get
it all there.

(4) Even though the sound card software claims to do packet, don't
throw away your TNC just yet. Maybe when PC's get to 10 GHz they will
compensate for Windows' overhead and do packet as well as a TNC.

My conclusion is that this is an area in major flux. Some standards
will eventually emerge, but we are not there yet. It is certainly
time to get on board and start playing.

From: DBN <dnicholson@socket.net>
Message-ID: <ue8cmmkasi389a@corp.supernews.com>
Source record: 43529

I have a 800w cont/1000w surge generator I would like to trade. It is unused, has never had oil in the crank case yet, and of course it have never been run. It has one 110 volt outlet and a 12VDC outlet with a cable. It has been stored here under my table in the shack for abt a year, and I am never going to use it as I now have a bigger unit for my camper/field day!! I would like to trade this generator for something I will use. <see below for ideas>
I prefer pick up on this or we can make some arrangements to meet. I am in central Missouri. If you want it shipped I would guess it will cost $30-$50 to crate it up and ship.

It is a No Name brand. Marked ET-1000. It looks like a Honda without the name. The engine is 2 stroke so it will run quiet.

If you just got to have it and want to buy it outright I will sell it for $275 cash/MO only and you still have pay shipping or make arrangements for pick up.

A few things that I might trade for.

Kenwood R-2000
Icom IC-720A in mint condition with Mic
Motorola MT-1000 UHF with good battery and charger
Motorola HT-1000 UHF w/good battery and charger
Kenwood TK-370 UHF w/good battery and charger
Mid range GPS receiver with NEMA output
Working older laptop with good battery and color screen
Just abt any good working 220mhz rigs
UHF duplexers <real ones not flat pack type>

6128. Dual Band 2M/70CM Mobile Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-16 22:48:40 UTC
From: Norm & Debbie <nwpars@insightbb.com>
Message-ID: <cHWE8.17400$AU.21847@sccrnsc02>
Source record: 43530

I'm looking for feedback on a dual band 2M/70CM mobile. I have an Alinco DR610TQ in one vehicle and would like to compliment with a unit in the other vehicle. The price should be under $500. What are your thoughts? Any brands or models anyone wants to recommend?

Norm, KB9VVT

6129. Looking for 2m rig

>>

A number of rigs from various companies are given a Milspec rating,
which may not mean too much, but at least it is some type of standard
for ruggedness. At least look at those models while comparing.

Also, with a group buying gear at the same time, there may be added
value in standardizing on a given model. This will simplify training
people to use them, and allow you to use the "cloning" feature to
transfer settings and frequencies from one to another, which can be
very helpful in an emergency. Also, accessories can be shared.

Buying all together may also give you some leverage in price.

Happy trails,

Hello Steve,
You have to be careful when selecting a power supply manufacturer,
some will give you RF noise and other unwanted headaches. I would
suggest you purchase an "ASTRON" power supply. What you described in
your message you are looking for an ASTRON RS-35.. The Astron RS-35M
is a few dollars more but it has two seperate meters Volts and Amps. I
have had "Astrons" for years and they are great !! You may or may not
know about Ebay, you can find some very nice ham equipment there. At
the main menu in the HAM section just type in the "Key" word ASTRON
and you will find many to select from. On last tip... if you can
afford the extra $$ always purchase a power supply rated for more than
what you are looking for, you will find you did not make a mistake in
doing so. It is always nice to have a little more than needed with a
power supply. The Astron RS-35/RS-35M will serve you well and you will
be very happy with your selection.

I bought a MFJ-4225MV, and it is one of the best supplies I have used. No RF hash like other switchers, very small (about 5" sq.), very light (about 3.7 Lbs.) Stiff voltage regulation, and ultra-fast current limiting/over-load shutdown.
It has meters for amps and volts, voltage is adjustable from 5-15vdc.
22 amps CCS, 25 amps surge. Built-in cooling fan.
Hard to beat at $150 new.

Hello Max,
You may or may not know of Ebay.
www.Ebay.com you want to go to the HAM section
http://listings.ebay.com/aw/plistings/list/category4670/index.html
You can find a ton of Ham equipment there a lot of items have a
Buy-it-Now option and you can purchase the item instantly.. others are
regular auction items and run for different periods of time. Check it
out .. it is worth the visit, I have purchased many items there and
everything is just fine. Be sure to check out the sellers feedback
from other buyers that have purchased items form the seller, you do
not want to see very many NEGATIVE responses.
Good Luck and 73

6141. What dual band mobiles make good scanners?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-17 03:20:22 UTC
From: zirconx9@yahoo.com
Message-ID: <e7d49913.0205161920.207b975@posting.google.com>
Source record: 43543

I haven't really wanted to spend upwards around $300 for a nice dual bander, but I did want at least a 2M and perferably a dual band for my car. I also wanted a scanner installed to pick up highway patrol, stuff like that. So I can maybe justify the cost of a dual band radio by also using it as a scanner.

So I know that many dual banders have wide receive, but what ones especially make good scanners? The dual band radios I've played with have a set of memories for VHF, and another set for UHF. You have to switch between the two, and can only scan one bank at a time. I'd really like something where I can just program frequencies in a memory bank, and then scan them all, no matter where they are in the band. And if one of the frequencies falls in the ham band, I can also TX on it. Is there such a beast? One that had adjustable deviation (maybe a half deviation setting) would be great because it would allow me to be able to pick up FRS clearly. Some friends of mine use FRS when traveling sometimes (I'm working on getting some of them to get their ticket!). Thanks for any help.

Oh yea, I need one that allows me to just mount the face on the dash somewhere, with a separation kit.

-Ryan

GE Portables

GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00

GE MPA VHF Select 157 - 174 split. Nice radio 9 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $200.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A little paint wear on the edges but I have seen worse. With charger and battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good and come with a battery and standard charger. 125.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display. With battery and standard charger. $135.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz. With battery, antenna, leather case, and pocket charger. $100.00 each. 2 available.

GE MPS VHF Like new 10 channel. With new battery, new antenna, and a standard charger. $65.00

GE MPS VHF 12 channel. Set of 4 that talk to each other with all new batteries and antennas. All in a rack charger. $225.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I sold this radio a year ago but have taken it on trade. Condition 8 with belt clip and charger. I had this radio run for stolen from CSX by a local CSX
Special Agent when I first bought these in a lot and was told that it had been sold at salvage. Perfect for a RR Museum or shortline on a budget. This could also be programmed for marine frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms. $100.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240 450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00 each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked Ericsson) $65.00

.GE S550 head 16 channel looks good but not tested. $35.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com)
With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice Guard, MPS, and Ranger. Printer is not working but I tried and it programs radios without the printer. Has manual for the programmer and the computer. Has Phoenix cable and Voice guard cable. All in the original GE case tested and working. (except printer) $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads.
And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate.
Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III VHF 146-174 split. 120 channel Alpha-Numeric display with secure - net module. (no out of country sales) des I think. I have been using this all week and talking on the ham band to test this radio.
Battery has lasted all week during drive time so it seems good. With rapid charger and big battery. $500.00 or trade for a VHF MRK II

Icom 3200 a Dual band ham radio. Has box and manual but no mounting bracket. Has tone squelch board installed. $200.00

Icom IC 24-at Dual band Portable. In good shape, Display has no scratches and only 1 small patch of the paint is peeled off of the back of this radio. With manual and wall charger. $165.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $195.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland.
$75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger I had to re-list due to a deadbeat buyer. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 ts, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola X9000 VHF 50 watt, Alpha-Numeric head, Siren complete.
$425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe, Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head.$225.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it. I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to two weeks to clear before I ship. If you have a question E-mail me.

Hi,

You may order your new QSL-cards from UX5UO:
Almost any type of QSL cards is available today.

Price of 1000 QSL-cards (including handling and mailing fee) is:
"Simple" (single colour one side 150 g/sq.m paper) cards -
22 USD*
"Advanced" (single colour one side 200 g/sq.m paper) cards - 26 USD
"Middle" (two colours one side 200 g/sq.m paper) cards - 32 USD
"Middle2" (two colours double sided 200 g/sq.m paper) cards - 38 USD
"Business" (200 g/sq.m paper double sided matt photo) cards - 44 USD
"Luxury" (200 g/sq.m paper double sided glossy photo) cards - 56 USD

Discount for ordering 3000 and more cards as well.
500 cards is possible as exception. Special discount for DX stations.

Cards will be printed within 3-4 weeks upon receiving order and payment
for all types of cards except picture cards (within 2 months for photo
cards).

Send your order (photos, rough design, text data etc) via mail:
P.Box 925 Kiev-100 02100 Ukraine
Phone (38044) 450-3752

or via e-mail to UX5UO ux5uo@qsl.net

> in the last few years have a line in. MK

Thank you Mark. I am planning to use a creative sound card with
windows 95 and it has the "line in" input, so no problem on that. I
will take care of the polarity also. If possible kindly give me your
setup of the resistors and the pot, so that I can duplicate it here in
my setup. My basic fear is that my rig is a homebrew with 48V at the
final pumping out 25W and I don't want to blow-up things. Also my main
concern is receiving CW, I can manage sending at 10WPM.

thanks again

Ryan.....

I've been using a Yaesu FT-8100 in my van the past few years and i'm really pleased with its capabilities. It is a dual-band rig, with wideband receive capabilities, including 800 mhz !! Extremely fast scan, one of the fastest i've seen in an amateur radio. You can remote the head (option) and program it with computer controlled software (another option).

Good luck,

Chris

I've had my FT-90 in the car since last fall, it too works really well as a scanner. It has a priority function, but only while monitoring a fixed channel, not while scanning. Also, there's no hang time after the channel clears, but it scans the channels FAST so it usually catches it quickly the next time around. While programming channels you can decide if they are in the scan list or not, and with a single push of a front panel button, you can temporarily lock out any of these channels (they get entered back into the list the minute you restart scanning, or cycle power.) I like it. if it had the hang time (delay) I've love it as a scanner.

Ken
Don't have the manual with me, but as far as I remember it's an analog
signal proportional
to the signal strength (during RX) and power output (during TX) voltages
shown on to the front-panel meter.

The manual -- if it's the same as mine -- won't help. I also received
an email giving the same information as your posting. If correct,
then the signal is redundant because digitized meter readings are sent
through the serial-out pin.

Also puzzling is the wiring diagram for the FIF-232C CAT interface
that I found on the web. It shows that same pin labelled "AGC" and it
is not in any sent to the PC over the RS-232 cable.

Any down points to the radio? What do you think of the transmitted
and received audio? I think I've read some people were not happy with
the TX audio. I do like the looks of the radio, and I am happy with
the Alinco brand.

If you're not aware of the ham radio section of ebay, try
http://listings.ebay.com/aw/listings/list/all/category4670/index.html

You can do searches for specific types of equipment -- search for "2 meters" for
example.

From: DrPepper@iwvisp.com
Message-ID: <3ce510fd.1090420@news.iwvisp.com>
Source record: 43461

I recently purchased an IC-751, (not the "A"). and I love it.
I am now getting on PSK31, and I can't seem to find the CAT interface plug. The manual shows it on the right side of the back, but it shows a plate held with two screws, and when I remove the plate, there is nothing but empty space & some wires in there. Can anyone tell me if the 751 is CAT capable, and if so, where is the plug for the interface?

Where in the rules does it say that it's legal to post to Usenet? It
doesn't; that's why it's legal. Ask that FCC rep to cite from Part 97
why it's not legal. Better yet, email bcross@fcc.gov and ask or that
information.

The Alinco 610T has adjustable scanning hang time - and I've got no complaints about the audio - but then I use mine as a base - not been on the road with it yet.

Yes, the "static drain choke" is connected across the terminals of the
antenna giving a DC short. If you need a copy of the manual, you are
welcome to download a free copy from BAMA. Good luck with your
new/old vertical.

If you are serious about scanning public safety frequencies,
you need a scanner that can scan trunk groups. I know of
no amateur radio that is also a trunking scanner. Why not
just get a trunking scanner and be done with it?

Trunk Trackers are not neccessary in all places.
I live in the Mojave Desert, and there ar no trunking radios in my
area, so why would I need a TT??

I use an Alinco DJ-580 dual bander HT, and it scans quite well, AAMOF,
most all dual banders will scan vhf hi , and 450~460 band as well as
the 70 cm and 2 meter band.

I am trying to make work the TS-440 with my computer. I have updated the equipment with IC 8251 and the 4040 and already have the If-232 but I believe that the cable series is not the suitable one. Is a null cable o one straight? I bought a straight cable but with it not to make work the connection. Also I made a null cable but I do not see that it works correctly. Somebody knows the correct connections of the DB25 to the DB9?

In other hand, can somebody help me about the setup of com-1? I understand 8 bits of data, 2 bits of stop but I don't understand how make the setup of 1 bit start and how is the flow control.

Many thanks in advance of Jesus, EA1FFC, Asturias, Spain.

Hi John. Can you wire the radio up to the ignition, and have it always come on with the key? I know some radios recommend you don't kill the incoming power with out first turning the radio off (I don't know why they didn't use a better design, like with a car stero there are two leads, one always on and one that is hooked up to the ignition that makes the radio come on. Duh!). I really like the size of the FT-90. Does the mic plug into the radio or into the remotely mounted face?

I think the FT-90 has an FM narrow mode. Do you know if this affects the entire radio, or just one band, or just one channel? I might like to have UHF set to narrow and use regular mode on VHF.

Thanks for the info,
-Ryan

you cant compare a ft90 to the 610 its not a true dual band. I think the
only true dual banders out there for good buys are the alincos 605s, 610s
and the kenwood tmv7 (cool blue) I have owned all except the 605. The
kenwoods mic it a tuffy to hold the ptt and the 610 not as cool looking at
the kenwood both work great.

Depending on your computer serial port, you might need to convert RS-232 signals to TTL. W1GEE makes an inexpensive cable for the TS-440 serial connection.

What do you guys think of the Yaesu FT-7100M?
(http://www.yaesu.com/amateur/ft7100mtx.html) I can get it for $259
until Sunday (I understand thats when the Dayton coupons expire).
Fairly small, more features than the FT-90??? I heard they had some
quality control problems, I wonder if those are taken care of now.
The dual receiver would be nice.

Hey Ryan,

I just leave the FT-90 on . Set the APO for 3 hours, and it turns itself off once I'm out of the car awhile. If it was scanning it will resume scanning upon turning it back on later. I rarely hit the power button to turn it off, and have suffered no ill effects as of yet.. <knocking on simulated wood>.
The mic plugs into the body of the radio itself, and the face detaches easily. I like this feature, I'll often remove it when in questionable areas, and at least know that if anyone takes the radio, it'll be useless to them. The radio is so small I opted to just mount it on top of the dash. I will caution you, use the mounting bracket. The body of this radio is the heat sink. Velcro-ing it to a dash cuts off 40% of your cooling area.. and most the problems I've heard associated with this radio and overheating, have been by people who've stuffed them under seats, in small cutouts in the dash...etc. I've had no heat related issues with mine, except a sluggish display in the winter if I've left the faceplate on.
As far as the FM Narrow setting goes, it's on or off...radio wide.
I've run mine in narrow mode since it's purchase, and never been notified of a complaint.
Also, as posted below, this is a two band radio, but not a true 'dual band' radio. In that , it will only recieve one frequency at a time.
(not dual recieve)

If you can find a copy of the IF2323 user's manual, I believe it has the cable configuration in it you need. I built my own interface, so I know how I wired it, but that doesn't help you much.

Someone has this online, but I don't have the URL here. If you want it, I can get it for you. I won't be online for a few days so don't worry if you don't hear back from me quickly.

Ryan... I've heard horror stories about the 7100. One fellow was telling me (and half of michigan, on a repeater) that when he called AES (I think) about buying one, they said it would have to be sent to yaesu to fix the inherent problems...after his purchase.
Now, if you want dual recieve, but dont need to transmit on 70cm (I can, but rarely do) AES is closing out the FT3000M . 2 meters at 70 watts, Wide Recieve (dual recieve at that!!!) and the ability to do some sort of cross band repeat... all for $199 plus free shipping for the weekend (dayton special)
All the eham.net reviews were decent on it, and it's $200 off the price it was a month ago.

Not sure what you mean by not working at all. Won't start up, won't
communicate with the radio, causes system crashes

I've been using the RT software for the VX-150 and FT-90 on Win98SE
with no problem, although I had to drop my Palm sync software from the
startup folder.

You will find that of all types of software, the kind that
communicates I/O is the most finicky. In many cases, all of your
communication software needs to be installed in a certain order, which
may mean removing everything and reinstalling. Some programs when shut
off do not release certain resources until a cold boot.

For some software, patches or drivers for XP are not out yet.

Call RT software tech support during the evenings posted. The limited
times I have needed to they have been quite helpful.

The freeware made for the VX5 only has the word "EVE" in its name. No
similar out there for other Yaesu rigs, AFAIK.
.

Happy trails,

Hello,
I have seen VHF/UHF antenna tuners manufactured by MFJ.
I would call A.E.S. (Amateur Electronic Supply), you can get their toll free number at www.aesham.com
The are always helpful. Another one is H.R.O (Ham Radio Outlet) , you can get there toll free number at www.hamradio.com
Usually but not all the time A.E.S. has the lowest price.

... or the FT-726 ... but either will need the addition of the 6 meter module, since both came with 2/440 only in their stock configuration.

In the price range of a clean FT-736 with additional modules, a used Yaesu FT-847 becomes an additional choice, is a more modern rig, and offers a lot of extras like HF, DSP, etc. Spec's wise, the FT-847 offers equal selectivity and image rejection, as well as the same spur specs, carrier and sideband suppression. Additionally, it offers more RF power on 2,6, and 440 bands than the 726 or 736.

Just a thought...

Hello, I bought a new CAT700 controller a few months ago and never hooked it to a repeater. It has the optional 16 channel DVR digital voice recorder. It has the Windows software programmer option. It is in the optional rack mount housing. It is like new! Paid $780. Will take $550. You can see it at their website:http://www.catauto.com/cat700.html
Thanks, Bob

The applicable group is rec.radio.swap It's out of the hierarchy,
deliberately, because people are likely to buy and sell items that aren't
just ham-related (such as test equipment). rec.radio.amateur.swap is a
bogus newsgroup; I thought maybe it only existed in cross-posting to
other newsgroups, but I found a few that were only posted to it. But
there was never any formal process to create it, so it's bogus, and
you can't count on it propagating well.

And of course, despite the ads, rec.radio.amateur.equipment is not
a buy and sell newsgroup. It's for discussing the equipment. So
is rec.radio.amateur.boatanchors, and the rest of the newsgroups in
the rec.radio.amateur.* hierarchy.

Hi, These radios are a few years old now and still current.
I use an FT-847 by Yaesu. Great radio, super hot receiver plus you got
the HF bands!!
The most bang for the buck. Click on the site below.

Source record: 43404

Hello,

I have several of this antique globe shape German triode in stock. It is directly heated, an European 4-pin base and about 12W anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max. anode voltage is 400V.The valves are NOS, but the boxes are mostly in bad shape. You will find a picture at my web site. www.demostenes.no
Just search for RS 242.
Please contact me if you are interested.

6208. MixW and CAT

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-18 23:23:49 UTC
From: cprstn54zz@att.net
Message-ID: <3ce6dfe1.206936625@news-server.optonline.net>
Source record: 43413

I am considering this integrated program, but won't be able to test it (no shack WIndows PC) for a couple of weeks. I have read the [huge] MixW PDF help file, but can't find the info. Also, the publisher -- while courteous -- has not squarely answered my question. This brings to mind a term from long ago when I was a systems analyst: vaporware.

Since my radio (FT990) has only one CAT jack, it would be nice if the one PC program that is talking to the radio uses most of the radio's CAT functionality.

Other than to key PTT or CW -- the only CAT functions the MixW help file expressly names and which I will not be using -- what does MixW do with CAT?

Does it let you change or read bands, emissions, frequencies, read and switch the meter, scan frequencies, etc.?

This seems to me to be a straightforward question, yet I can't seem to get an answer. Are there any users of MixW in here who can shed a little light?

For Sale:

1 each ICOM IC-T81A 50/144/430/1200 MHz handheld FM transceiver and 1 each additional BP200 battery. Package contains original accessories i.e. factory rubber ducky, operators manual, wall charger and total of two BP200s, both with belt clips. The radio is only a few months old and excess to my needs. It is in like-new (9.9 out of 10) condition (I don't abuse
my stuff) and works perfectly. Material is located in St. Mary's County, Maryland.

Yours for only $245.00, pickup or shipped to your door (U.S. address) via Priority U.S. Mail.

Hi everyone,

I got a Radio Shack VHF Business Radio today and I want to move it
over to MURS, but I can't find programming instructions anywhere.
There's DIP switches insiide the battery compartment, but apparently
they're to set CTCSS tones. Anyone have the programming info?

I was unable to attend this year due to military duties.
What are the reports from Dayton?

Other than rain, what was the big news?

Any good deals like we had last year?
New equipment? (the VX-7R was selling
for about $379).

Ever since the ICW2As I have stayed away from Icom HTs. I still have two Icom HF rigs.
Now that was a good many years ago, but those (I had a pair) were very expensive and also the most fragile HTs I ever have owned.

I would hastily add that todays rigs (HTs) are far better than in the era where they first went to the "does everything" type of rig. Now days they do more and for less money.

IF the rigs are primarily for the disaster plan, although undoubtedly some will actually discover they can be fun and useful, "I think" that it would do well to stick with the simpler to operate HTs. I say that as most of the multi-band, HTs that can work cross band repeat can have numerous funcions for each key and can be very confusing to program.

As I reprogram mine so seldom, I have to get the manual out each time and relearn the procedure. Some of them are such that you would darn near need to have a group session with them about once a month. I have a variety of VHF/UHF mobile rigs which of course, complicates matters as the programming is different.

The easiest to program is an old Alinco DR610T. Unfortunately, if you use the manual you'll never get it programmed as the manual is wrong in a couple of spots...In particular, they have the sequence to put the VFO frequency in memory.

I also have a pair of Kenwoods (TMV7A and TM700D) and both require some time with the manual to reporgram if I haven't done any programming on them recently. Again, once the procedure is learned, it's relatively straight forward...You do have to remember to make certain all is programmed onto the VFO, such as off set (normally auto offset), tone (setting the tone frequency and then inserting it onto the VFO program), and you may (depends on the rig) have to set the squelch level. Then you write the whole works to

a selected memory channel.

I've been using a pair of TH-G71A HTs. They are about as simple as you can get for dual band and have good batter capacity. Learning the programming steps is relatively easy, but again these are not the "does everything" type of HT.

To be honest, I beat the snot out of my HTs. I get them to use and still do a lot of tower climbing. When I get rained on they get rained on. When I get soaked, they get soaked. When it comes to weather watches I may end up with water running down my back and into my shoes (rain gear is no gurantee except for short trips out into the elements)...My HTs need to be able to stand being out in heavy rain and I've not found a holster/pouch that keeps them dry in such situations.

BTW, a couple of months back I had a coax swing around and take the one TH-G71A right off my climbing belt at roughly 100 feet (Even with the HT under my jacket). The HT did a great job of disassembeling itself when it hit the soft (rain soaked) sod. Naturally it hit antenna first, so that wasn't any good either. The HT is now in a glass jar, as a parts source.

I'm not saying this to either recomend for, or agains Kenwood, or Alinco, but to point out the programming and possible shortcommings that you will find in virtually any multiband righ. That and reguardless of how they are rated, they are not bullett proof physically.

> >I would like to hear how rigs worked in
> >wet cold (not freezing) weather and

All these rigs have been in a closed car in bright summer sunshine on a hot summer day and in well below freezing weather. If you are talking disaster planning, disasters have never been known to wait for good weather.

One very hot day the TMV7 had a blank display. As soon as the car started cooling it went back to looking normal, but that display was about as close to being permanently blank and returned as probably possible.

Unless you live in an area that does not get extremely hot or cold, don't rule out those possibilities. Add, or subtract about 10 degrees to your normal extremes just to be on the safe side.

If the mobile rigs, or HTs are going to be left in cars, out in the hot sun be wary of the type display.

As I said with mine, HTs live a hard life. Sooner or later most of them are dropped, dropped in mud, or dropped in water. In many cases the only alternative is to rinse the thing off and hope it survives.

> >very dry summer heat (100 degree F and more).

See above comment. 100 degrees plus days inside cars can fry many LCD displays. That temperature probably limited your selections.

> >Also, about rigs that new amateurs find
> >easy to quickly master.

And that just removed a bunch....I know there are many hams who can easily master about anything out there, but many of those rigs are beyond many beginners.

For simple and limited use, I'd pick a single band unit, either mobile, or HT. That and they are relatively inexpensive. Some are far easier to program.
Unfortunatley I have the duobanders and can't give you a lot of information on the more simple rigs as to brand and model.

Fortunately, the name brand manufacturers are starting to come out with relatively simple monoband rigs again.

> >
> >Sincerely,
> >Bill Thomas
>
> If these fine church folks are actually going to get amateur licenses, then you
> shouldn't be too worred about whether the equipment will "survive lack of care"

It's not the lack of care, but the type of service. Up here in Michigan the weather watches (both summer and winter) really take their toll on HTs. The high summer temps can also fry the display of a mobile left out int he summer sun.

6231. New Icom dual-band 2720 radio

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-20 00:22:50 UTC
From: "Bob M." <xxxxx@yyyy.zzz>
Message-ID: <ulXF8.53671$e66.5018165@bin6.nnrp.aus1.giganews.com>
Source record: 43437

Besides seeing it in the latest AES and HRO catalogs, and on a Canadian web site, anyone have more info on Icom's latest dual-band radio? It seems to be two separate radios in one box, each with its own volume, squelch, and channel selector, allowing V-V, U-U, and V-U operation. It seems to have a remotable control head, but I don't know if the mike plugs into the control head (like Yaesu) or the radio electronics box (like Kenwood). I also don't know if it can do cross-band repeat, although they'd be foolish not to add that (Yaesu thoughtfully left it out of their 7100). I suppose it was on display at Dayton, but since I didn't go there, I'm posting here.

Thanks for any info or links to web pages.

Bob M.

Source record: 43443

Most of Friday was basically a washout, due to the cold rains. Attendance was unofficially the same as last year (roughly 30,000 or so). Seemed to be a lot of vacant flee market and indoor vendor spaces this time.

On a brighter note, Yaesu had an awsome display of the VX-7R (3 of em submersed in water, with bubbles rising from below.....looked like a large aquarium !!!). I checked with several vendors and the prices varied from $334.00-$369.00, depending on who you talked to. R + L Electronics had them for $334.00 and they got my business.

There were some real super computer deals too. Saw a new, 1.7 AMD Athlon with 40 gig HD, 32 meg sound card, and Windows XP loaded for $350.00. Not too shabby.

http://www.cloningsoftware.com/yaesu_template.cfm

gets you to their Yaesu software.

Note that the cable w/adapter used is identical to the one used for
the FT50, FT10/40, VX1, VX5, and they will sell the software only if
you already have a cable, or make your own.

If you have multiple rigs, you can have a master spreadsheet file and
import into various programming softwares for various units.

I use mine at the full 5W virtually always, never noticed any issues
even during several hour PS events. Granted, for those I am listening
most of the time. In that usage, I get at least 6 hours on a full
charge. Terrain and buildings make less than 5W questionable for
reaching many local repeaters.

I don't bother with the stock rubber duck, but use a 1/4 wave flex
antenna.
Happy trails,

Anything significant new from Icom? An upgraded model of the IC-706xxx?
A replacement for the IC-T81A (which looked very interesting on paper
but was withdrawn or discontinued)?

Dayton was, as usual, outstanding.

The Hamvention was less well attended than those that used to occur at the end of April, but that is a _good_ thing - for us. I'm sure its not making as much money for DARA as those former Hamventions, but the lower attendance meant you could get close to things and see stuff. You could actually get to touch the radios in the big-3 manufacturer's booths without elbowing people or standing in a line for 15 minutes.

I saw maybe 60 % of the flea market by about noon on Friday. Then I came inside and stayed, since I was looking for stuff in there, and then it started raining so going outside would not have been productive - the vendors generally shut down during the rain except those with tents. It was a really cold rain, too, so unless you brought real good raingear and an array of cold weather clothing, you wouldn't have been comfortable.

On-site tickets were $22. Not too bad for 3 days, but much grumbling was heard about 3 things:

1) The programs don't come with the ticket any more - that essentially raises the price of the Hamvention to $27 unless you downloaded all the interesting forum info and vendor map info from the web site (not sure if the vendor map was available on the web).

2) The buses from the mall were $2 instead of free. Lotsa grumbling.

3) The private-owned parking across from the Hamvention went from $5 to $8 a day this year.

Other downers: The big tent at the corner of the flea market was replaced with several smaller tents. These smaller tents didn't have all that the big tent used to - Radio Shack, for instance.

A possible contributing reason for the lower participation - there was hype of extrordinary security measures - "no knives", "bomb sniffing dogs", etc. (I don't go places like that myself - too much hassle, as I routinely carry a pocket knife - and I think such measures are nonsense since many other things can be made into effective weapons) - but then remembered that stuff like that is _sold_ there, so such measures would be impossible - like "no guns" at a gun show... is a 1 1/4" combination wrench a weapon? Sure it is - and of course there was no such extensive security, although there were officers with dogs - they just were never seen sniffing anything. Probably ordinary K-9 units.

The common reason for less attendence that was heard was "ebay".

My take on that is that you aren't going to get a new radio that goes for $899 at the Milwaukee AES for $699 from AES on ebay like you can at the Hamvention. That was an example heard via "on the road" chatter as I was driving back to Virginia.

Conclusion: Dayton is still "The Big One" and is a more user-friendly Hamvention than ones of old that drew 37,000 people. Those were impossibly crowded.

Interesting.

The guy who had the goat-cam last year traded his goat in for a rooster. Since our tailgate was adjacent to his, we got to make fun of it too.

I purchased one of the first of the new Kanga KK7B R2Pro kits. I'm well aware that although a couple of prototypes of this kit have been successfully built, I'm mostly a guinea pig... I plan to get started on it this week and I'll let y'all know what I think of it.

Fun stuff that lots of folks pointed at: a 25 watt Copper Vapor Laser. No I'd never heard of one before either. I don't have the slightest idea what it's good for except that it was very large and very heavy (large and heavy enough that even a full sized pickup couldn't get it home without a good sized trailer).

For those of you who want to own the ultimate surveillance receiver: AOR was showing their AOR-ONE. It covers 10 kHz to 3.3 GHz multi-mode in 1 Hz steps. They're asking for something like $4k for this beauty. No, it's not blocked for cellular. No, it's not for sale in the USA (wince), without authorization.

I got a kick out of Yaesu's display of the VX-5R --underwater and working! Personally, I'd have added a few goldfish to the tank just for fun...

Lots more to report. Those are just a few hints of the insanity.

73,

Jake Brodsky, AB3A mailto:frussle@erols.com

I will wire it directly to the battery, but through a relay which will
be wired to the ignition. I'd like it to come and off automatically
with the key. That doesn't work well with some radios, though. I
don't know why more manufacturers don't build their radio to handle
that situation. You don't have to turn off your AM/FM radio when you
turn your car, off, do you?

By the way, I ordered a Yaesu FT-90R this weekend. Thanks for the
input everyone.

Not as difficult as it sounds... Try a decent silica-based
valve-grinding paste.

Yeah, I accidentally left my VX-5R sitting on the car yesterday during a surprise rain shower. Today I worked 2 UO-14 satellite passes with it. It works fine.

(WHEW!)

Rugged little rig.

Sorry if this topic has been covered before... I plan to travel from Chicago to Boston in late August and want to bring along my Icom 706 MkIIG, a small autotuner, and a compact power supply. Is it possible to get thru security with this stuff? I definitely want to carry it onboard. Thanks in advance for any input you may have es 73.

I also enjoyed Hamvention again this year (last year was my first), but....what I found most dissappointing was the apparent lack of interest in scanning/swl. The listener's forum on Sunday AM (not exactly the best schedule slot) had at most about 30 people attend. Out of all those thousands??? The Mobile HF forum, ATV forum, etc were packed.

Are we really such a small group of folks? Also disappointing was the very few used scanners, decoders, etc to be found out in the flea market. Yes, the deals and availability of new, current equipment were good, but where are all the killer deals on older equipment? Scanner Master, Radio Stop, Computer Int, and CAT were present as was Pop Comm. But where was Grove Enterprises, Ham Station, or any of the other great scanner dealers? I would think Monitoring Times could add to their subscription list and so could Scanning USA?

Is there no world class event for listeners?

RV (KD5LJK)

PS: Correction to some of the other posts - the underwater radios were the VX-7R - neat looking rig.

I bet those radios weren't in the water. i remember a display for water resistant watches and saw the man pull them out of a dry tank behind the water. either way, they are supposedly water proof radios and my friend got one there for about 250.00,
I got several good deals, must have brought in 500 bucks worth of stuff for 300 bucks... The best two days I ever spent as far back as I can remember, except for when some idiot tried to lift my wallet...several radios were stolen and some vendors inside had their setup to where they couldnt watch there stuff well and I saw a couple of walk off's there... every crowd has them...

Have a copy of your ham license, on the chance that they might want to see
it.
Your supposed to have it with you everywhere you go, just like your drivers
license. If you plan to talk on the radio, or drive a car.

Actually you'll have less trouble with your Set-up than if you were carrying on a VX-5.
Prepare to open the case for visual inspection and questions.
1. Place a copy of your FCC license in the case with your Rig.
2. Carry your rig in a Hard Case that meets airline carry-on specifications.
3. Above all be Courtious to the screening personel.answer any and all questions they might have. (Most of them are overworked and underpaid) they can make life hell.
4. Inform your airline what you plan to carry-on.
5. NO DX from 45,000 feet.
6. Enjoy your Trip. I hear DX to the EU is great from Boston <g>

I heard Yaesu equipment was selling at rediculously low prices,
(FT817 $499. FT100D $540?). Yaesu also showed off a new portable/base
radio, the FT897. Looked real nice.

I love Dayton, and living in Cincinnati makes it real easy. I was disappointed. One, I'm getting real tired of the rain and cold. Weather was better when they held it a few weeks earlier at the very end of April.

Ticket prices are too high. No program anymore and increase in parking. No wonder attendance was down. Why charge for the program when the ads they sell are paying for the darn thing to be printed? Next year I wonder what manufacturer is going to pay to run an ad that most people won't see because they are going to fork out money to buy it!

I noticed that the Cincinnati Hamfest has reduced their ticket prices to get people to attend this coming year. They really screwed up moving it from its old location years ago. Used to be well attended. They kept moving it around town so it lost its identity. Nothing like it used to be. I hope the Hamvention folks don't screw up what they built.

Even with the bad weather, flea market prices are too high and the fools won't really negotiate down to reasonable prices for used gear. In some cases it's actually cheaper to buy new.

A lot of vendors that normally attend were missing or hiding real well. No Universal. No Jun's (Ham City) and a few others that usually attend were no where to be found.

The VX7R's were in water. The mics were actually connected and went right into the water so you could use the handhelds if you wanted. Oh, and R&L was selling them for $339.

One reason I think attendance is down is the lack of innovation in products. Much of the stuff is the same old thing with different packaging. I have to commend Yaesu for at least trying and every year they seem to have something new. Icom is talking about some new digital stuff, but I'm sure it is a ways off.

The Ten Tec Orion is nice, but the price is out of sight. Their new long awaited QRP rig started at $595, then went to $695 and now they are taking orders for an August delivery at $795! Too much money, not enough rig.

SGC used to have a good rig with the 2020, but I noticed they screwed that up and changed the fixed SO239 on the back of the rig to a pigtail. Another component to fail. Also they took away the power plug and now have a pigtail for the power lead. Yikes, on an HF rig?

APRS is really growing in popularity and there was a really nice APRS exhibit. People think it is only for tracking but there are a number of capabilities that make it very useful, fun and interesting.

Special note to the vendors. Try to look excited about your products when folks stop by to check out your products. I have a fortune in Kantronics gear so I stopped bu to chat. Early on Friday so they could not have been that tired yet...well I asked about intelligent tracking (APRS) for the KPC3+. Got a ho-hum answer that they're not going to do anything.

Hats off to the Yaesu gentleman (Japanese) that greated me when I went to get my free hat. I was carrying the FT-1500 box in my hand as I went through the line. He looked at the box and said "thank you very much" with a smile on his face. Now there is a man that made me feel good about buying his product.

One last gripe...get rid of the non-ham, non-computer vendors...are you guys that desperate for money? Just how many sunglass vendors do you need at a radio/electronics/computer show? And enough of the trinket vendors.

I just wish the Dayton folks and the vendors will sit down and talk about improving this event before is declines to the point where they can't get their audience back.

Of course many of the ills can be cured with more hams.

Wire it direct to the battery with fuses on both ends of both connections for added safety. Not only will this help to reduce engine noise in the radio, but it will gain access to full power it needs. Cigarette lighter sockets and fuse panel connections don't necessarily provide enough power to run the rig properly if using higher power modes of the rig.

As far as the connection to the ignition switch, I would strongly advise against that. If you are worried about drain on the battery system, most rigs could be left on for up to a month and not drain the car battery enough where it would not start, unless there was already a problem with the vehicles electrical system. I had, at one time left mine on for about 10 days before, without using that vehicle for anything and when I went to start it, it was like I had just shut off the vehicle.

In the wintertime (at least around here) it gets really cold, and it is my thinking that keeping power to the rig may keep it at least a few degrees above the temp. of the interior of the vehicle.

What are some of the best sites for looking up dx prefixs, dx info, antennas, general ham info ect?

Kirk

6285. The Windom is back again.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-21 04:41:43 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <accj66$bh8$1@knossos.btinternet.com>
Source record: 43388

New Program: WINDOM2.exe

The original Windom (1929) antenna has now fallen into the antique category. It is a simple 1/2-wave horizontal dipole fed over a single-wire transmission line of no particular length except that it has to come down near to ground level to be fed against ground just like all ground-mounted verticals. The trick of using a single wire feedline is made possible by tapping the line into the dipole at a short distance off-centre.

By tapping at the right place the vertical feedline can be approximately Zo-matched. The SWR can be reduced to 1:1 yet the feedline will still radiate. But since this fills in the nulls in the dipole's radiation pattern it will always be welcome.

As just described it was originally used as a one-frequency antenna. The main reason being that in the early days transmitters were capable of transmitting on only one frequency. It might have had something to do with steam-driven LF alternators.

However, in these days of tubes and transistors, it turns out the Windom is a multi-function, multi-frequency, multi-band antenna. Provided its height plus the length of the longest 'half' of the dipole is longer than about 1/6th wavelength at the lowest frequency of operation it has a consistently high radiating efficiency.

Its relative high base feedpoint resistance means that a very extensive gound electrode system is not necessary. But for multi-band operation a matching network is always needed. The program calculates the L and C values of an L-matching network. When a single series tuning component is all that's needed the program calculates that too. The loss in the L-network is taken into account when calculating overall efficiency. A coil Q of 200 is assumed.

A table of loss resistance values of the ground connection for various numbers and lengths of radials is included in the notes.

The antenna can be changed from Inverted-L, to Dipole, then to a T-antenna by lowering the dipole and sliding the tap along the wire. This will change input impedances and radiation patterns. Scope for experiments?

This deceptively simple antenna deserves greater interest and popularity - for both novices and old timers.

Download program WINDOM2 in a few seconds. See what makes it tick. About 51 K-bytes. No unzipping inconvenience.

Amp Supply Co. LA-1000 HF Amp. 160-10m

Have for sale or trade an Amp Supply Co. LA-1000 HF amplifier. Late 80's model, with Ameritron serial placard. Manual states 500-600w output. Tubes (4 ea. 6lq6)
are doing about 450 on 80m. Amp is in good shape and working perfectly but has a few scratches. Power switch has been replaced with incorrect but heavy-duty switch.
Interested in trading for a quality BASE scanner/recvr, unblocked, etc. Not interested in
handhelds. Looking for something like a BC9000XLT or ?, something with alpha display,
blocked, unblocked, what have you, or other per below.
Will only consider Icom, Kenwood and Yaesu mobile ham
radios depending on mod availability.
Will also consider only
Motorola/Radius handhelds or mobiles (Max, GM, M1225, etc, as well. Jedi, Radius or Pro series.) Prefer VHF. U-ship, (will average $20-$35 CONUS), or I ship depending
on deal.
Thanks and please reply direct,
Randy

I don't know if anyone has seen the website I'm looking for (I hope they have), but I've lost the link so I cant give it to anyone either.
Hoping someone can help me with the web address.

The website is about a bloke in America (maybe Canada I can't remember). He is an amateur that lives in a zone where the power delivery isn't fantastic. To combat this he set up a car battery in a battery box with a volt meter and a cigarette lighter socket built in (as well as big posts for his radio equipment). Apparently this wasn't good enough so he linked up a solar system to it as well. There were a couple of other attachments also.

Hoping someone can help me out with the address for it.

Thanks in advance,

Brian.
Sydney Australia.

6293. Help Wiring Motorola Desk Mic????

I have a nice low profile Motorola desk mic that I'd like to wire to a Syntor mobile (for base use). The mic has PTT and monitor buttons.

It has these four wires:

Red
Green
Black
White

Can someone help me with these functions to wire this mic?

Thanks
Tom

Hello all...just bought the VX-1R and have the software and cable for a FT-50. I tried calling the number that came with the software for RT Systems, and they either moved or are out of business. Does anyone have a website or any information on this company. I will gladly pay for an upgrade or even buy a new version of their software and cable if that is what's required. The software for the FT-50 is great, and sure saves a lot of time. Thanks a bunch...

Dave

P.S. Dayton sure was blast, even with the cold weather!

Brian, you would be better off using a battery made for supplying a relatively small amount of current for a longer time. A car battery is optimized to supply a huge amount of current (100 to 200 amps) for a short time in order to turn the starter motor. When the car is running, its electrical needs are supplied by the alternator powered by the engine. Gel cells are really what you want. They are sold for computer room uninterruptable power supplies (UPS) and camper vehicle use. Perhaps you can get them from a computer service company or just buy a couple of new ones. The gel cell have a charging power requirement similar to Nimh batteries and the charge control chips for Nimhs work well for gel cells. Do a web search for "gel cells" and you will get all you need! Also, do a web search for "Luke Enriquez". He is an Australian ham and engineer who has a nice design for a gel cell maintenance system.

6304. PK88 TNC problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-21 17:28:10 UTC
From: Bert <g3azi@btinternet.com>
Message-ID: <ace039$cm0$1@helle.btinternet.com>
Source record: 43308

Hello,

I have been using this AEA PK88 for over 5 years with no problems.

It has just now failed to perform!

At switch on only the 'PWR' and 'Mult' are lit.

The computer states it cannot detect the TNC. If I switch the program off and on again a row of letter Capital C with a 'tail' appears.

I have tried to get the 'Auto-Baud' routine to occur by changing my Baud rate and other settings to those mentioned on page 2-5 in the PK88 Manual.

I have changed the battery even though the existing one was only showing 0.1 volt less than the new one.

All to no avail.

Can anyone suggest any line of further investigation, please?

(I should mention that the PK88 was a gift from the USA.and so far I have found no Company in UK I could approach. Nothing 'Google' turned up seemed relevant.)

Best wishes,

Bert G3AZI

The late Tom Douglas who held the call G3BA was a Prisoner of the Japs.
He fashioned a makeshift 'crystal' receiver - IIRC a razor blade was
one of the principal components.

Hello,

I have several of this antique globe shape German triode in stock. It is directly heated, an European 4-pin base and about 12W anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max. anode voltage is 400V.The valves are NOS, but the boxes are mostly in bad shape. You will find a picture at my web site. www.demostenes.no
Just search for RS 242.
Please contact me if you are interested.

Regards,

Arnold Goks�yr

Don't they have gennies down there? I live in a part of the third world called New Jersey and our electric company, once known as General Public Utilities (aka three mile island) is notable for outages. Some joke on us, they got taken over by First Energy which discovered holes in the Davis Besse nuclear reactor (used to be Cleveland Electric). Ergo hoc, propter hoc I have two generators for power outages.

Where's global warming when ya really need it, huh?

>Weather
>was better when they held it a few weeks earlier at the very end of April.

Disagree. Been going since early 70's. I got rained on a _lot_, and
it was almost never a warm rain.

>Ticket prices are too high.

Try going to Kings Island if you think this is high, and the
Hamvention is better.

>No program anymore and increase in parking. No
>wonder attendance was down. Why charge for the program when the ads they
>sell are paying for the darn thing to be printed?

I noticed a lot _less_ ads in it. Mfgr attendance was somewhat less,
too, so there were fewer of those to place the ads. CATS, the guy
that repairs the rotators wasn't there. The guys from Indy selling
software weren't there, either. The big Radio Shack salespoint in the
big tent in the flea market wasn't there, and neither was the tent.

>Next year I wonder what
>manufacturer is going to pay to run an ad that most people won't see because
>they are going to fork out money to buy it!

Fewer. Charging for the program _is_ a mistake, I think, but not a
deterrence to me. Heck, I drove 1100 miles round trip for this - an
extra $5 doesn't even show on my radar screen.

>I noticed that the Cincinnati Hamfest has reduced their ticket prices to get
>people to attend this coming year. They really screwed up moving it from
>its old location years ago. Used to be well attended. They kept moving it
>around town so it lost its identity. Nothing like it used to be. I hope
>the Hamvention folks don't screw up what they built.

Ebay is said to be screwing up the Hamvention the most, and probably
the Cincinnati event as well.

>Even with the bad weather, flea market prices are too high and the fools
>won't really negotiate down to reasonable prices for used gear.

I saw a real nice roller inductor go for $20, after the guy had wanted
$30. I got an LS-120 superdisk drive for my computer for $35 in the
flea market. 6 split nuts to hook up ground wire for $0.25 a pair -
try to find those at Lowes or Home Depot for that price - forget it.
Flea market is OK by me. You may have run into a few people with gold
fever...

>In some
>cases it's actually cheaper to buy new.

People pay over retail on ebay all the time. Go figger.

>A lot of vendors that normally attend were missing or hiding real well.

Yep.

>No
>Universal.

Universal was there - the store and the tower manufacturer - store had
really small booth tho.

>No Jun's (Ham City) and a few others that usually attend were no
>where to be found.

I think the attendance was probably less than 20,000. You need more
than that to draw the smaller players.

>One reason I think attendance is down is the lack of innovation in products.
>Much of the stuff is the same old thing with different packaging. I have to
>commend Yaesu for at least trying and every year they seem to have something

I like the new TS-2000 Kenwood - I have one out in the Jeep right
now...

>APRS is really growing in popularity and there was a really nice APRS
>exhibit. People think it is only for tracking but there are a number of
>capabilities that make it very useful, fun and interesting.

Yes, even I noticed APRS this time. First time I found out that you
don't need a computer in the car to use it. Any explanation of APRS
you read starts out with mapping software, etc. which leads one to
believe you need a computer in the car. For that reason, I wasn't
interested. Now, however, I'm thinking my old HT would make a good
APRS xcvr. Just wonder how I can carry on a regular 2 m QSO with that
thing also blatting in the near vicinity. Duplexer?

>Hats off to the Yaesu gentleman (Japanese) that greated me when I went to
>get my free hat. I was carrying the FT-1500 box in my hand as I went
>through the line. He looked at the box and said "thank you very much" with

>his product.

I think I would have liked such an experience too.

>One last gripe...get rid of the non-ham, non-computer vendors...are you guys
>that desperate for money? Just how many sunglass vendors do you need at a
>radio/electronics/computer show? And enough of the trinket vendors.

Well, I'll take _any_ income to the Hamvention that supports it. We could lose it, ya know! Hara Arena can't be cheap to rent. The flea market _wasn't_ sold out from what I could see, and the inside had space too. If you didn't have the sunglasses bunch there, then you'd have bare pavement not contributing anything, and the ticket price to get in would likely go up some more.

>I just wish the Dayton folks and the vendors will sit down and talk about
>improving this event before is declines to the point where they can't get
>their audience back.

I can't see anything they've done that could be construed as a fault. I believe that all the higher prices are likely necessary to keep the show going at all. I think that they should maybe have tacked on $2 or so to the ticket price and gave a free program with it instead of what they did - that would have eliminated the loud and obnoxious, in 1 case at least, people selling the programs, as well as the unlikelyhood that those sellers were doing it for free. They probably got $1 or so out of each one.

>Of course many of the ills can be cured with more hams.

Kill ebay and we'll talk... <GGG>

Probably so, but a car battery will run the station for an awfully long time. Out here in the wilds of Michigan it's fairly common practice to use a car battery and a trickle charger. Combined they cost less than a "proper" supply, and even the worst ice storm rarely takes out the power long enough to drain the battery.

Good heavens, you never made a "foxhole radio" when you were a Boy Scout? A razor blade, preferably a little rusty, and a pencil lead. They used to have blades that had bluing on them like a gun ... if I recall, they worked extremely well, or maybe not at all, now I'm not so sure. I was probably 8 or 9 at the time.

Maybe the way around it is to have some e-bay auctions on site. Bidders could view the stuff, then run back to their laptops (or nearby computer kiosks) and put in a bid. The auctions could run 2 to 48 hours.

Laugh about it, but time will come when you will get outbid by somebody using a PDA and Bluetooth standing right behind you. The dealers would love it.

Don't know the site but all you need you will find in yachts chandlery catalogues. We live permanently on 12 v batteries. Solar / wind / additional engine alternator / towed rotator if we could get 12v from rubbing two sticks togethere we would do it.

I have a FT-736R with the FIC-232 interface. What is the best
software for full doppler tuning for satellite work ?? I have Nova
for Windows, but they want an additional $150 for the Nova Tune module
w/ hardware. Besides, Nova for Windows doesn't seem that stable...
Crashes a lot. What else are people using ??

The blue blades didn't work well.. the "bluing" was a sort of plastic
coating that kept the pencil lead (or safety pin) from conducting.

Foxhole radios are about the very simplest radio receiver possible. They can be built from any two dissimilar metals and a length of wire and a crystal earphone. During WWII, the parts of choice were a safety razor blade and a either a pencil lead or safety pin. The blade was mounted to a piece of wood as was the safety pin. The pin was mounted so that the point end could be moved around the surface of the blade to find the most sensitive detection point. The length of wire was connected to the blade, one side of the earphone was connected to the safety pin. The other side of the earphone was connected to a ground point. These radios had neither selectivity (they picked up whatever was closest) nor sensitivity. They were best suited to receiving CW (Morse) signals, although they did receive AM signals as well. Alternatively, a high impedence dynamic earphone, popular at that time, could also be used.

Hello,

I have one of these nice vintage power triodes in stock. Heater is 10V
4.8A, anode dissipation is 65W and max anode voltage is 1600V. The
valve is NOS and in its original box. You will find a picture and more
data at my web site - www.demostenes.no
Just search for RS 31g.
Please contact me if you are interested.

Regards,

Arnold Goks&#65533;yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

From: courir26@yahoo.com
Message-ID: <a0dd5fc9.0205220418.68e6eb5b@posting.google.com>
Source record: 43254

I did not have a VOM at this new QTH (it is all back at the old house), thus the question, but I was able to borrow one and determined that:

Red = PTT
White = Mic audio
Green and Black = ground

The radio is in my garage at the new house, and the mic and speaker are in the house. The combined control line length is about 95' and it works great. I was concerned that this might be too long, but apparently the Syntor can suck the mic audio through this much hose.

I'd never buy radio gear on E-Bay.
All E-Bay represents is a "feeding frenzie"
type market for ham gear. What I see people
paying for ham gear on E-Bay leads me to
belive that there's an awful lot "shill bidding"
going on. Something that I would not put past
some of the so-called "private dealers" that
I used to see travelling to all the hamfests
like gypsy traders. You know, the guys that
buy up all the honest bargans offered for new
hams by the old-timers, that show up an hour
later on their table or on E-Bay for double the
price or more. Buy used ham radio equipment
on E-Bay...?? Anyone who does so should have
their head examined.

Even more amazing is the ignorance folks like yourself have of that behavior.

I worked with a Phillipino who'd been a teen during the Jap invasion. He said most expected the Japs to act like the Americans or the Spanish before them. The didn't! They beat him and his dad half to death, raped his mother and sisters then hauled his older brother off to a labor camp and his sister to a brothel where both died within a few months. He survived because his mother was from a jungle tribe and they hid with them. If that's not enough, consider what happened in China and Korea. Worse yet, modern Japanese still have shrines venerating the perp's of these atrocities! That's reality!

Sounds typical of the behaviour of invading forces
when colonising. The Brits were no different, the Union
Jack flag being known as The Butcher's Apron.

And just what effect do you suppose that your own Yankie
missiles had on the civilian population of Iraq, Bosnia, etc?

Yup - that's right; your fellow humans were burnt to death,
had limbs blown off; were crushed to death under buildings.
Doesn't seem much difference between the Japanese of the
1940's and the Americans of today in terms of the effects
on their victims, does there?

In terms of the American involvement with the Japanese,
the matter of Pearl Harbour, far from being a day of infamy, was
an honourable attack. The stupid Secretary Of State was playing
childish games in respect of not giving an audience to the
Japanese ambassadors, and that is the _ONLY_ reason
that the USA had no warning. The Japanese were entirely
honourable in declaring war and then attacking.

WANTED: DEAD OR ALIVE - Still need battery for Kenwood TH-21AT Handi.

I have a working TH-21AT handi but it has no battery. None are available from the various battery venders but they say that they can insert new batteries in the old shell. I am searching for an old battery (PB-21H or PB-21) that fits the TH-21AT and has a good shell for refill purposes.

Please let me know by email if you have one that is available.

Thanks for reading,

AL

No one can say their nation has not committed atrocities in the name
of the nation.
But lets hope we all learn from their, and our, errors. But more
importantly, lets just let bygones be bygones.

Yes I hope they are. I went up to the DARA booth and asked where the booth was for the scooters and they told me they didn't know. Didn't they put the show together? Then when you asked anybody else they tried to sell you a program for $5. Very Sad. I hope they learned something this year. Maybe the big companies should find a new place to have the ham fest. Somewhere that it will be about getting hams together to buy and sell radios, and share ideas and not about how much money they can make putting on the fest. To bad it has become only a money making project for them.
Atleast people like Icom and Yeasu were having some good sells. I too was getting tired of people saying I can get more then that on Ebay. Maybe those sellers should stay home and hide behind their computers because I'm not going to pay Ebays high prices.

Sorry just my 2 cents worth

But maybe I could get 3 cents on Ebay!!! HA HA HA HA

OK, pick it up on a crystal set and copy it. I was responding to the statement that a crystal set was best suited for CW, but could also pick up AM.

I disagee with your premise that A1A is AM.

Modulation implies adding audio to a carrier. Simply doing on/off keying adds no modulation (disregarding key clicks etc)

Never ceases to amaze me how cheap some hams are. Who gives a rodents behind about a program? Besides if you paid to get there and got a room what's a few more bucks for a program. I wonder how many get tossed or end up on the ground when they were free? Its called capitalism, and maybe with more and more gray hair in amateur radio, DARA had to do something to recoup their losses. I noticed the crowds to be WAY DOWN. AES had great deals, I bought two VX-1R's, they were $99 each!!! Just hope that we have bands to use all this gear on in a few more years. I have been to Dayton several times, and don't worry about the weather either. Be smart and bring the right clothes. Obviously there were several gonads who walked around with shorts on and tee shirts, probablly in the hospital now. They looked real cool!!! Didn't see the chicken cam, but did see the goofball with the tower on his head!! Always fun to people watch, can't wait to bring my newly licensed wife, she will be laughing all weekend next year!! Still the best hobby on earth...

This was my 1st hamvention and I had a blast! I've heard that attendance is down this year, but I think there was just enough people... enough to talk to, buy from, work on the air, etc. but enough that it's not a gigantic mob of screaming operators. :) I liked the Yaesu VX-7 display even though I only half-believed that they were actually submersed. They WERE actual radios though, I believe they were on weather frequencies. It was great to be able to actually use the radios on display, I've heard that at previous 'fests, you had to wait to use them. I got to sit and look at / use the PROII (I think that's what it was) for about two minutes! :) I didn't buy a program though, it looked like it was mainly sold as a souvinir (did I spell that right??). The crystal scanner, three business band HTs (one convertable to 2m), and two FRS radios are souvinirs enough. :) Plus, forum lists and maps of the arena (which were actually MORE ACCURATE than the ones in the programs) were available for free to those who asked nicely. There were a few good scanner dealers there. I stopped at Bearcat Radio Club and another scanner mag (which one?). Bob Grove planned to be there but had a family emergency :(Too bad, because I was looking forward to listening to him at the Teachers forum. One thing I noticed was that there's a LONG hallway that goes around all the arenas. Very handy once I found out about it. Also, did anyone else see the 25kw dummy load out in the flea market? Wow.. that's one big dummy load.

Yes Charlie.....saw one, and bought one !!! Did a little shopping and found the lowest Hamvention price at R+L ($334.00), to the highest price (AES) $369.00. Needless to say, R+L got my business. They ran out of them, but one will be shipped to me this week.

Nifty looking HT. Yaesu had 3 of them displayed submersed in water....looked like a fish tank!!!

The moved it to May to try and avoid the "april chill" effect
but sometimes mother nature has a way of tossing a curve
ball into the jet stream :) That same weekend
there were record low temp's all across the Midwest
and Northeast. A fluke in the Wx that couldn't be
helped. (unless of course whomever else is reading
happens to be a "true believer" in the chem-trails
and weather modifications BullShip they promote
on reactionary shortwave radio, in that case I'll
leave the reasons up to their imaginations :) :) :)

> Ticket prices are too high. No program anymore
> and increase in parking. No wonder attendance was down.
> Why charge for the program when the ads they
> sell are paying for the darn thing to be printed? Next year I wonder what
> manufacturer is going to pay to run an ad that
> most people won't see because
> they are going to fork out money to buy it!

Agreed. One of the Cardinal Rules of marketing is
never to let your potential customers know that they
are paying you a percentage of the advertising
budget! This is a faster turn off than paying retail.
People "like to" or "need to" think that they are paying
ONLY for the product they want to purchase. This makes
them think their getting a bargain deal, except for
big ticket items like Cars and Homes where it's a given..

Unfortunatly The Hamvention people seem to have not
lost their appetite for profits at any expense and
knowing how traditionally cheap ham radio op's are
this is not a good publicity move. (the only exception
being the cost of soda/pretzels/burgers which can be
priced as expensive as those at the dog racing track
and they'll still buy the greasy/carbohydrate packed
stuff)

Look at similar examples like Radio Shack charging
for their formerly free catalog (unless you buy something)
and the numerous sites on the Internet that used to carry
live streaming audio feeds for free, which have now dissappeared
or you are charged a listeners fee for. Radio Shack has
since resigned to giving catalogues away for
free again, if you wait around till March, and dot.coms
who charge pay-per-view/pay-per-listen are just about
all gone to byte-heaven, except of course for the
porno and bizzare sex video on demand websites ;)
[and most of this "pay-per-view" stuff you can now download from
www.kazaa.com for free! Kazaa is the new Napster folks - check it out!)

The general public is tight enough when it comes
to trying to get a dollar out from their wallet
for some things, but just try the same with white male
middle-aged ham radio op's?! You'd have better luck
trying to wrench a canned-ham bone from the
jaws of a junkyard dog. :) :) :)

> I noticed that the Cincinnati Hamfest has reduced

> the Hamvention folks don't screw up what they built.

I've been to the old Cincy-hamfest of years past, darn shame as
it was almost as big as the original Gaithersburg Md hamfest.
Same thing happened to the hamfest up in Hamburg NY when it used
to be held at the County fairgrounds. They moved it, now it's a
mere shell of it's former self last I heard. Many more have just
dissappeared without a trace.

> Even with the bad weather, flea market prices are too high and the fools
> won't really negotiate down to reasonable prices for used gear. In some
> cases it's actually cheaper to buy new.

You can thank E-Bay for that JDB!
Without a doubt the world biggest
24-hour online sucker-hamfest.

Perhaps I'm wrong, but it seems to
me that more than a few of these "professional ham
equipment dealers" I see with E-Bay item sales
and feedback counts in the 100's - and a
few in the 1000's) seem to network
amongst themselves to drive up the base
auction prices on ham gear(??) A bit of
"shill-bidding" here and there...perhaps..??

> A lot of vendors that normally attend were
> missing or hiding real well. No Universal.
> No Jun's (Ham City) and a few others that

>
> The VX7R's were in water. The mics were actually connected and went right
> into the water so you could use the handhelds if you wanted. Oh, and R&L
> was selling them for $339.

Cute gimick, but Motorola or Cobra has had a pair
of waterproof "sport" FRS radios out for close to
a Year now for $59.95 in a hanging blister-pack
at WalMart last I looked.

> One reason I think attendance is down is the lack of

> orders for an August delivery at $795! Too much money, not enough rig.

I agree with you 100% on the re-packaging of gear.
I'm one to peek "under the hood" of new radio gear
myself. What's "behind" that graphics-filled LCD?

Yaesu does seem to be the leader in innovation and
I would put Alinco in as a close second. Kenwood and
Icom...?...booring! Just expensive bells and whistle
gadgets in cheap sheet steel boxes. Looking at the electronics
inside of your average Icom and kenwood reminds me of
the insides of a Korean VCR that you can get for $65.00
at Circuit City. (and they REALLY pay 2-3 grand for
some of this stuff...??!! rotflmao!)
Yaesu and Alinco are mostly newer design
SMT with clean layouts and by far a better
value - Alinco I feel has the best dollar per
radio value going.

Sad news on Ten-Tec. The Orion shoud be called the Onion.
Looks like it came off the prototype workbench in the
Engineering lab - with all the bugs still inside. (?)
Iam afraid Ten-Tec will be gone by this time next year.
They used to build great rigs in the late 70's and 80's.
Easy to work on with readily available replacement parts you
could get from Digi-key and Mouser electronics if
needs be. Now their overpricing themselves out of the
market. What Ten-Tec *needs* to do is return to their roots
and build rigs like the Triton and Omni-D series again.

Functional and utilitiarian radio gear that is easy
to operate, maintain, and has minimal gimicky bells
and whistles. Stop trying to mimic the Japs, dump all
this digital pushbutton crap, except for the freq
display, and put more single-function standard type
controls. The Omni-D (..of which I own 2 of) are a
great example. The Paragon was perhaps the best radio
to ever come out of Tenn.

> SGC used to have a good rig with the 2020, but I noticed they screwed that
> up and changed the fixed SO239 on the back of the rig to a pigtail.
> Another component to fail. Also they took away the power plug and now
have a
> pigtail for the power lead. Yikes, on an HF rig?

Agree again, not a good idea to put a mid-power level
RF connector or high current power receptacle on a
pigtail. Anchor female receptacles to the chassis
with bolts and do it the right way. (I hope they
never get the idea to put a spring-loaded cable
retractor/pull reel like what's the power cord of
the XLY's Electrolux vaccum cleaner...oy! I heard one
engineer from Cubic or Azden talking about that
for a DC cigarette adapter power cord many
years ago at Dayton and nearly got sick...)

> APRS is really growing in popularity and there was a really nice APRS

> improving this event before is declines to the point where they can't get
> their audience back.
>
> Of course many of the ills can be cured with more hams.

I could not agree with you more strongly on the "trinket vendors"!
If I am going to PAY an admission fee to a flea market (which is
what Hamvention really is folks!) then I had better see stuff for
sale that I DO NOT SEE at the local every-weekend flea market
just down the road, where the admission and parking is free!!

Case in point, for years this one guy would show
up at all the Eastern hamfests selling new cheap
import luggage and gym bags. No ham stuff period.
Next year he was joined with some other guy selling clothing
and other crap in another section of the flea market.
Again no ham related items whatsoever for sale between them.
I've never been back to the hamfests that let these
turkeys into their flea market and I never will.

I could not make Dayton, and I really hope that
it is not turning into another consumer
products junk market dumping ground! It's bad
enough with all the computer related crap.
All that needs to happen is for somebody in an
overloaded mini-van to show up and be allowed to
start selling cheap imported wristwatches
on rubber banded styrofoam display cases, and you can
then kiss the Hamvention goodbye. (please someone
tell me these wristwatch-dealers did not show up and
were allowed to set up and sell like they did
someplace in NC last year!)

Hello, tnx for reading this msg.
Our clubstation is equipped with a Kenwood TS 570 HF transceiver. We plan on buying a 2m transverter. Any recommendations? Also any tips on how we can overcome the TX limitation (28-29.7, resulting in 144-145.7, rendering 145.7-145.999 inaccessible for TX)?

Thanks and best 73s

I would disagree with that statement...

Modulation implies adding *information* to a carrier. That information is
often audio, but it can be something else. Video (TV station), data
representing text (pagers), data representing God-knows-what (802.11
wireless LANs), whatever.

Text encoded in the International Morse Code is also valid information.
Information that's usually added to a carrier by turning that carrier on and
off. I don't think it's at all wrong to call that modulation, and the
parameter being modulated is certainly the amplitude.

>I would disagree with that statement...

I think the ITU modulation definitions tend to agree with your
disagreement ;-). I looked up http://www.itu.int/ars/rr/aps01.htm,
and the definition of the first "A" is specifically:

1.2 Emission in which the main carrier is amplitude-modulated
(including cases where sub-carriers are angle-modulated)

1.2.1 Double-sideband A

Normal CW Morse telegraphy is A1A - double-sideband amplitude
modulation of the carrier, carrying quantized/digital information
without the use of a modulating subcarrier, for telegraphy. This is
made pretty clear in the table down in Part B of the page I cited
above, in which CW Morse telegraphy is specifically listed among the
"Amplitude Modulation" examples.

Sending Morse by switching an audio tone (subcarrier) on and off, and
then amplitude-modulating this onto a carrier, would be A2A.

In defense of the sale. That was no ordinary 101e. A mint condition Model T Ford brings a little more than the original price too. They aren't very good cars, no A/C, no cruise, no stereo, etc.

Doug, I am not going to get into one of these pointless discussions where definitions are created to suit one's position.

You win pick up the marbles!

So I guess I never really needed that BFO on the receiver, and I shudder to think how many receivers have an unnecessary CW position. We simply could have switched to AM and copied the amplitude modulated signal.... Right!

|Hello, tnx for reading this msg.
|Our clubstation is equipped with a Kenwood TS 570 HF transceiver. We plan on
|buying a 2m transverter. Any recommendations? Also any tips on how we can
|overcome the TX limitation (28-29.7, resulting in 144-145.7, rendering
|145.7-145.999 inaccessible for TX)?

I have yet to interface the two yet but I have a TS-870 and an SSB ELectronics transverter. As I see it, the biggest problem will be keeping the transmit power out of the hf rig low enough for the transverter input. I haven't looked at the overshoot of the transmitter yet. Some radios, even with the power control turned down use the ALC system for control and this can overshoot at the beginning of a transmission.

My previous system used a Drake TR-7 and homebrew transverter. I modified the Drake to bring out a low level transmit signal to a seperate connector on the back of the rig. I picked this signal off from the PA driver. I haven't gotten up the courage yet to try this on the Kenwood although it's getting old enough that worrying about resale value is becoming less of an issue. This certainly would be the best solution.

I don't know about European band planning but in the USA, there is no SSB operation above about 144.5 and I don't know of a reason to use a transverter other than to run CW or SSB. If you must have greater coverage, then the only alternative is to switch the frequency of the crystal oscillator in the transverter.

Downeast Microwave http://www.downeastmicrowave.com/ makes a line of transverters and interfacing accessories.

Just purchased a Cushcraft A3S tri-bander, I was wondering what success/gain can be expected with the 40 meter add on kit? The antena will be mounted at ~50 feet. yes I have checked the Cushcraft web site, no figures as far as gain or if it's just a rotatable diapole.

I agree that $5 isn't going to bankrupt anyone at the Hamvention,
but there is also a matter of principle involved. I'm sure there
are tough pricing decisions that the DARA people had to make, but
I found this one particularly onerous, and made more so by DARA
neglecting to inform people of their decision beforehand. I was
frankly offended, as much as I would be if a restaurant I frequent
suddenly decided to impose a surcharge but neglected to mention
the fact before presenting the bill.

The decision to ding people for a program is simply a bad one and
we should be unequivocable about letting the people who run the
Hamvention know that.

Allow me to elaborate on my poor choice of words:

When I said that a foxhole radio was better suited to CW reception, I was alluding to the fact that this type of radio has a very high distortion of AM signals, due to the nonlinearity of the detector junction, and the fact there is no filtering of the detected signal. And yes, you CAN copy CW with just a detector, no BFO, nothing. Early CW receivers had no BFO, the operator simply listened for the duration of the carrier wave (hiss).

Your receiver, even if it doesn't have a BFO, is definitely reproducing the signal as it was transmitted. Imagine that you hooked a speaker in series with the code key at the transmitter. What would you hear? It wouldn't be a nice 700Hz keyed sine wave.

If you go back far enough, you see that there is some evidence that Morse never intended his telegraph code to be decoded by ear. It was to wiggle a pen on a moving strip of paper; Morse was intended to be decoded by eye. If that intent had survived to the invention of radio, a BFO would have been unnecessary; a BFO-less receiver could have driven the pen and delivered perfectly legible code. (it may also be instructive to note that the early wireline telegraph equipment had no BFO; the operators were actually able to copy the clicks and clacks...)

Today, you could build an IF-DSP receiver in which the appearance and disappearance of the carrier would be interpreted by the CPU as Morse elements. Perfect Morse could be displayed (within the limits of QRM, QRN, and the sending operator's fist!) without a BFO ever existing.

The BFO is an enhancement added to allow a human operator to read a code that was intended to be read by machine.

MOTOROLA GP300 VHF W/ EXTRAS - NO RESERVE

You are bidding on one, Motorola, GP300, 8 channel, 5 Watt, VHF portable radio. It is model # P93YPC20D2AA. The radio is used, but has been re-housed and checked by a local Motorola Authorized Service Center to meet all factory specs. Included in the auction is one Motorola Speaker Mic, HMN9030A, in perfect condition. Also included, but not pictured, is one, single-unit charger - BRAND-NEW IN THE BOX!!! The battery is Intrinsically Safe, in excellent condition (according to the Alexander Battery Analyzer), with a year 2000 date code. I prefer PayPal, but will accept Billpoint, Money Orders, and Cashiers Checks. NO Personal Checks. Please feel free to e-mail me with any questions. Winner must contact me within 24 hours of auction close. Good luck and thanks for looking!

For any crystal-type receiver, one had to have either a very close local ground wave, or a strong skywave. Or, alternately, a long enough antenna to catch what little was out there.

I'm currently researching the idea of using deep-cycle marine batteries.
A huge battery is cheaper than the stupid little 12V 7AH battery my UPS
needs.

No, I won't be using the huge one with the teensy UPS. I have a pair of
huge old Elgars I got because the charging circuit was overcharging and
ruining the 4 12V 15AH batteries inside. I'm thinking of either repairing
and beefing up the charging circuitry or removing it entirely and kludging
in a real battery charger with some beef to it.

I could get four of the marine deep-cycle batteries cheaper than *one* of
the 12V 15AH batteries.

I have a 800w cont/1000w surge generator I would like to trade. It is unused, has never had oil in the crank case yet, and of course it have never been run. It has one 110 volt outlet and a 12VDC outlet with a cable. It has been stored here under my table in the shack for abt a year, and I am never going to use it as I now have a bigger unit for my camper/field day!! I would like to trade this generator for something I will use. <see below for ideas>
I prefer pick up on this or we can make some arrangements to meet. I am in central Missouri. If you want it shipped I would guess it will cost $30-$50 to crate it up and ship.

It is a No Name brand. Marked ET-1000. It looks like a Honda without the name. The engine is 2 stroke so it will run quiet.

If you just got to have it and want to buy it outright I will sell it for $275 cash/MO only and you still have pay shipping or make arrangements for pick up.

A few things that I might trade for.

Kenwood R-2000
Icom IC-720A in mint condition with Mic
Motorola MT-1000 UHF with good battery and charger
Motorola HT-1000 UHF w/good battery and charger
Kenwood TK-370 UHF w/good battery and charger
Mid range GPS receiver with NEMA output
Working older laptop with good battery and color screen
Just abt any good working 220mhz rigs
UHF duplexers <real ones not flat pack type>
GE Lookout repeater in UHF
Kantronics KPC-4
Icom 1.9mhz SSB filter for the 706MkiiG FL-223
Comet CF-360 diplexer for use with a 706
Alinco DX-77T

Combinations of the above items or maybe something along the same lines but not listed will be considered.

Let me know!

Dan/N&#65533;FPE

I am about ready to enter the world of PC sound-card radio: PSK31, RTTY, Packet, CW, etc. It looks to me that in the near future, most of the world will be doing ham radio via PC sound card and CAT. This will require integrated software that does not appear to be available yet. Is this correct?

I have noticed that the various programs accommodate different hardware arrangements, with the most full and complete set appearing to be that for MixW:

http://www.mixw.net/hardcon.htm

MixW lets your PC key CW on your radio and even connect a set of paddles to the PC via the joystick port (hard keying CW is imporatnt because it lets you use your radio's CW-mode filters). However, MixW's CAT functions are not well documented. CAT seems to me to be a very important functionality.

Your radio has only one cat jack, which eventually connects to a PC COM port. No one offers any CAT drivers for the PC that let two programs share CAT. Therefore, the program you pick for CAT is the only program that will be communicating with your radio (except for PTT, CW-KEY and audio-in/out).

So if you want to have PC control of your radio for greatest funtionality (including contesting and logging), you have to start with a program with that functionality. Most of the programs that are good at this aren't also doing the whole nine yards of sound card radio.

Can you get both funtionalities? Do any of the relevant programs share CAT information?

Lastly, with new radios costing $2500 and 1 GHz PC's costing only $250, Why aren't the radio manufacturers offering packaged solutions? Why is everyone hobbling software and components together with RigBlasters, Rascals and solder?

I keep my ARES Packet Node on a "deep cycle" battery like Russell describes but got a wet cell intended for electric outboard motors vs a gel-cel cuz its mucho cheaper (<$50) than gel-cels of the same rating. I "float" it at 13.8V using a charger made for that purpose so, when (not if) the AC power fails the station doesn't even notice for at least 24 hours. IIRC the charger was well under $100US and has yet to over-charge the battery enough to require water.

The "house" batteries in our motorhome use the same system.

Also, just bought a smaller portable wet cell intended for lawn tractors from Walmart for $15! Figured the portability was worth that small price.

6411. psion 5mx to TNC - What is going on?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-23 14:31:54 UTC
From: David Hawkins <davidhawkins@dsl.pipex.com>
Message-ID: <3ced00d1$0$232$cc9e4d1f@news.dial.pipex.com>
Source record: 43166
Cross-posted to: alt.radio.amateur,comp.sys.psion.comm,rec.radio.amateur.equipment

Has anyone tried to connect the 5mx to a TNC (terminal node controller). I am attempting to connect but only having partial success.

I have come to the conclusion that there is aproblem with the PSION's serial port - can anyone confirm this?

I have made up numerous "null modem" connectors (see later) thinking that this was the problem but I am now beggining to have doubts.

I have 2 TNC's both of which work with a PC using Hyperterminal (but only with software flow control).

I have tried 2 psion 5mx's with 2 different psion leads and still get the same result:-

My TINY-2 TNC gives this logon script with a PC:

```
PacComm TINY-2 Packet Controller
AX.25 Level 2 Version 2.0
Features:
KISS
PERSONAL MESSAGE SYSTEM V 3.0
CLOCK CHIP SUPPORT
CWID
Release S1.1.6C1 30/01/90 - 32K RAM
Copyright U.K. by SISKIN ELECTRONICS
Checksum $2C
cmd:
```

But this with the Psion:

```
PacComm TIY-2 Packet Controller
AX.25 Level 2 Version 2.0
Features:
KISS
PERSOAL MESSAGE SYSTEM V 3.0
CLOCK CHIP SUPPORT
CWID
Release S1.1.6C1 30/01/90 - 32K RAM
Copyright U.K. by SISKI ELECTROICS
Checksum $2C
cmd:
```

Note that the psion seems to ignore "N". And this also occurs with the other AR-210 TNC

AOR data controlller AR-210
AX.25 Level 2 Version 2.0
message board Ver 1.28E
Release 15-Mar-92
Checksum $F4
cmd:

If I manage to get through to the TNC with a MY command it returns MY was OCALL rather than NOCALL.

Getting a command through with either TNC is difficult in that I have to switch software handshaking off then back on to get through. Hardware handshaking allows nothing to appear at the cmd: prompt.
And only the first command seems to work!

I have measured the voltages on all pins and those from the PC seem to be +/- 10v as do those from the TNCs. The psion only puts out 6v. Could this be the problem?
I thought that TTL levels were supposed to be +/-5v or am I wrong?
If this is the problem is there anything I can do about it to get my TNC's working with the Psion (particularly the AR-210)?

I have been at this for ages and need help - many thanks if you can give it!

David Hawkins (G7IBO)

Just for the record this is not true. Today the 3 so-called 'war shrines' simply symbolize the war effort and visitors are paying respects to family or friends who were lost in the war (as you might reasonably expect to find in any other country).

For your information, my office for the last 12 years has been situated less than 100 meters from the largest "war shrine" (Yasukuni Jinja) and my car park is located within the grounds of the shrine itself (they operate a paid parking system for private vehicles to utilize spare land) so I walk through the shrine at least twice each day and have a good opportunity to gauge the atmosphere.

There is no veneration of the war in Japan and there is no basis for your comment.

Not sure what you mean by "powful," but the Ramsey
Electronics kits are great for learning. Minutes after I
finished my 40 meter transmitter, I worked a station
3,000 miles away...

I'm not sure what you have in mind. Do you want a solar powered battery?
or just a way to have a back up 12v supply?

Astron Power Supply makes a few of thier power supplies with a special
circuit (the -BB option) to attach a 12v battery. This turns the Astron
into a sort of 12v uniteruptable power supply. During 'normal' times the
power supply charges the battery, but if commercial power should fail the
battery takes over powering the equipment.

I have this setup running my APRS WX station. The BB option is a special
order from most retailers however (they usually don't stock them) As I
understand it, the special circuit not only charges the battery, but
protects the power supply when commercial power fails and power is drawn
from the battery. NOTE: I found out the hard way I had to reduce the
voltage on my Astron to keep from over charging my battery.

For information on solar (and all types of re-newable) energy check out
Home Power Magazine.

that certainly is a weird tale. have you tried the following:

1. connect the 5mx to your PC and transmit text (containing an 'N')
from there to Psion - what happens?

2. use a different terminal on the Series 5mx - like:

http://www.iota.demon.co.uk/psion/hermes/hermes.html

these steps might allow you to troubleshoot completely and, ultimately
by process of elimination, identify the at-fault party.

good luck

6429. Re: Kenwood TS570 & 2m transverter

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-23 23:29:27 UTC
From: Gert Leunen <on1blu@pandora.be>
Message-ID: <rXeH8.93001$Ze.14357@afrodite.telenet-ops.be>
Source record: 43185

Hi Wes,

thanks for the info. From the manual, I gather that the TS 570 limits the output power automatically once the transverter function is enabled in the menu.

The reason is that we're thinking of satellite operation. First of all, we're scheduled for an ARISS school contact and while we have an all-mode 2m, it isn't computer controllable (cf Doppler shift). But afterwards, we might take it further into general satellite expirementation. We don't want to invest ridiculous amounts of money on multiband VHF+ transceiver(s) (besides, from what I gather, no commercially available transceiver receives real good points on this type of communication). That's why transverter(s) are an interesting "low-cost" alternative, leveraging the features of a good transceiver (as I've been told) like the TS 570.

6430. Li-ion battery charger information

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-23 23:57:46 UTC
From: "Michael B. Blake" <m.b.blake@att.net>
Message-ID: <_IfH8.950$LC3.64592@bgtnsc04-news.ops.worldnet.att.net>
Source record: 43187

I am looking for input on a charger that will charge the Kenwood PB-42L Li-ion pack that comes with the TH-F6A. I have a spare pack and it is not very convenient to put the second pack onto the radio to charge.

I have seen the new Maha C777Plus but it is very pricy. I have a C777 so I do not need anything but the Li-ion capabilities. Several of the chip manufacturers have dedicated chips so there must be some chargers available.

Any input on existing chargers that might be suitable would be appreciated. I would guess that cell phones, cameras, etc... use very similar batteries. I have seen Li-ion chargers for the canon Li-ions for as low as $30 that charge their BP-111, 7.4v, 1100mah Li-ion pack..

If you have built a charger I would like to hear about that as well.

The ARRL Dayton report on its web site refers to a new Yaesu FT-8900 quad band mobile radio. I can't find anything about it on the web. Has anyone heard anything about this radio? It would be great if it did 220.

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)

Source record: 43193

A reminder for those of you who reside within what you feel is
'reasonable' travel distance to Seaside, Oregon.

SEA-PAC, the ARRL's Northwestern Division Convention and Hamfest is
coming up from Friday, May 31st thru Sunday, June 2nd, at the Seaside
Convention Center, 415 1st Ave., Seaside, 97138-5909.

Lots of fun stuff planned, including techie presentations, a huge
two-day swap meet, and equipment manufacturer exhibits.

Talk-in is 146.660, negative offset. More info may be had by
visiting http://www.seapac.org

Yes, I'll be there, selling and buying stuff at the swap meet and
catching the Saturday banquet. ;-)

Keep the peace(es).

In article <3ced4273.177919269@news-server.triad.rr.com>,
jhensley@neocomm.net says...

> I need some program software for motorola ht-600 hand held. If youhave
> any to loan, sell, or trade let me know at jhensley@sitestar.net

Have you ever read Motorola's license agreement for the stuff?

I spent seven years with Motorola in the Comm Sector back in the
late 80's/early 90's, and I have most definitely read said license
agreements. Very nasty stuff... draconian, even. Essentially, once you've
bought the package, you can't sell, loan, lease, or copy it to ANYone
else.

I wish you good luck in your hunt, but I really think you'd be
better off just paying your local radio shop to do the programming for
you. I really doubt you'd want to attract the attention of Motorola's
legal eagles.

6438. Re: PK88 TNC problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-24 01:36:46 UTC
From: Mike <mlaw3825@earthlink.net>
Message-ID: <OOgH8.1312$cN4.844@newsread2.prod.itd.earthlink.net>
Source record: 43195

I too have the PK-88 tnc and one day it developed the same "issue" as yours.
No, dont go and trash it! Sometime when I use Paket 6, it will put the tnc
into "Mult" mode, dont know why or how, and the only software i know of that
will "RESTART" it is PKGOLD, even though it is a demo item, it will still
clear it out and reset it to CMD mode. try and look for the software on
www.qrz.com under software downloads and under packet software (same site)
when it asks you if you want to hear HF tones etc, select NO, then it will
ask you if you want to initalize the tnc, press Y follow the easy to follow
questions, and voila! its "RESETED"
Good Luck

GE Portables

GE MPA VHF 146-162 full system keypad. Radio is as new and is almost
perfect. The only flaw is the grip tape under the PTT button is
peeling at the edges. Otherwise perfect. The next feature is, The
radio is Key pad programmable. 16 channel scan and front face
programmable. Has a like new battery and a good rapid charger. Also a
belt clip. $500.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5 condition with
battery and standard charger. I have it programmed down to 154 MHz with no
trouble but will go no lower. $225.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A
little paint wear on the edges but I have seen worse. With charger and
battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display.
With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These
look good and come with a battery and standard charger. 125.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha
display. With battery and standard charger. $135.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz.
With battery, antenna, leather case, and pocket charger. $100.00 each.
2 available.

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170 but I
have programmed these in the ham band with no trouble. These have battery,
antenna, and standard charger. I will program these since it is suitcase
programmer only.
$100.00 includes programming. I have several of these.

GE MPS VHF Like new 10 channel. With new battery, new antenna, and a
standard charger. $65.00

GE MPS VHF 12 channel. Set of 4 that talk to each other with all new
batteries and antennas. All in a rack charger. $225.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I sold this radio a year ago but have taken it on trade. Condition 8 with belt clip and charger. I had this radio run for stolen from CSX by a local CSX Special Agent when I first bought these in a lot and was told that it had
been sold at salvage. Perfect for a RR Museum or shortline on a budget. This could also be programmed for marine frequencies. Like new tall Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms. $100.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240 450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00 each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked Ericsson) $65.00

.GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger. 16 channel
model has short cable and some handle bar mounts. Mic included but no speaker.
Not tested yet since I just got it in. $50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice Guard, MPS, and Ranger. Printer is not working but I tried and it programs radios without the printer. Has manual for the programmer and the computer. Has Phoenix cable and Voice guard cable. All in the original GE case tested and working. (except printer) $850.00

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III VHF 146-174 split. 120 channel Alpha-Numeric display with secure - net module. (no out of country sales) des I think. I have been using this all week and talking on the ham band to test this radio.
Battery has lasted all week during drive time so it seems good. With rapid charger and big battery. $500.00 or trade for a VHF MRK II

Icom 3200 a Dual band ham radio. Has box and manual but no mounting bracket. Has tone squelch board installed. $200.00

Icom IC 24-at Dual band Portable. In good shape, Display has no scratches and only 1 small patch of the paint is peeled off of the back of this radio. With manual and wall charger. $165.00

ADI AT 201. 2 meter portable nice like new and in the box with the manual. Has 5 watt battery and wall charger. $90.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice 2 meter Radio. $125.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $195.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland.
$75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger I had to re-list due to a deadbeat buyer. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 ts, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know

"Motorola" They are good people and I will pass along any trades you may wish to make.

Motorola X9000 VHF 50 watt, Alpha-Numeric head, Siren complete.
$425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe, Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-
Numeric head.$225.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables,
proms, Anything you have extra. MPA or MPD portables what do you have and
what do you want for them? Johnson scorpion program cable.

17AH gel cells will barely run an HT. High current drains are
impractical because gassing within the cells insulates the plates
faster than the gel can absorb and causes the internal resistance to
rise out of hand. Current drains should be limited to 20% of AH
rating (and with boat batteries too).

Big as you can get (into your tray) Marine/Starting batteries are a
pretty good compromise if you have to use it in your car.

Does anyone know of a source for getting 1 or 2 obsolete OKI MSM5502 decade counter IC's. I have tried every source I could think of with no luck. I have seen them listed by several brokers but they would not sell in small quantities and US Bid has a $250 minimum bid. This is a 16 pin DIP and was made as late as 1996 by OKI. It was used in the digital frequency displays of several pieces of Kenwood ham equipment (TS-700 SP) in the late 1970's. I understand it was also used in some communication scanners. There is no sub for this chip.
Best Regards, P.Thamm

Source record: 43208
Cross-posted to: sci.electronics.repair,sci.electronics.components,rec.radio.swap,rec.radio.amateur.equipment

Does anyone know of a source where I can buy 1 or 2 OKI MSM5502 IC's. These are obsolete IC's Which where used in the digital frequency displays of several pieces of Kenwood ham radio equipment such as the TS-700SP as well as some scanners in the late 1970's. They may also have been used in test equipment with fluorescent displays.There is no sub for it. It was a 16 pin DIP BCD counter chip for dynamic displays. I have tried every source I know of with no luck. They are available through some of the larger chip brokers but they won't sell in small quantities. They cater to OEM's. US Bid shows them but their minimum bid is $250 which is more than the equipment is worth. OKI made this chip from the mid 70's until 1996.
Any help would be appreciated. Kenwood no longer stocks it.
Best regards, P.Thamm

6453. HELP! FT-11R Programming info needed urgent!

If anyone can help me I would definately appreciate it. I have a Yaesu FT-11R that has somehow lost it's programming. No big deal, except that I do not have my book with me and I am a paramedic away at work right now. I have to program some of my basic channels back in using the keypad and cannot remember how. If someone could steer me in the direction of online manuals or a summary of how to do it again I would be extremely greatful. Thanks.

The cable you already have for the FT50 will work fine for the
FT10/40, the VX1, VX5, and VX110/150. Without the 3 to 4 adapter, the
main part will work with the FT51/11/41.

The current version of the ADMS-1E will work fine for the FT11/41/51,
FT10/40/50, VX1, and VX5. You may need to upgrade to the current rev
to get all of these units. When you install it to your PC, I believe
you need to install for specific units. Double check your install disk
first.

Happy trails,

I was told that these shrines commemorated the officers who ordered and
the men who perp'd these atrocities; this by an American also living in
Japan. If that is untrue then I was misinformed. Sorry.

Hi does any one know how too put the icom 821H in to cross band repeat mode?
And will it do it right out of the box or is there a mod needed?
Please e-mail me direct.
Thanks for any help

OK! Time to discuss the USA atrocities during their
invasion of Vietnam, rapes, massacres, etc.

Also, any war shrine or memorial is a hideous thing.
Anyone who goes around the world fully prepared
to wound and kill his fellow man has only himself
to blame if the tables are turned on him.
To commemorate such deaths is to glorify
the organised murder that is war.

It was so long ago I forget. I contacted the manufacturer of my "deep
cycle / marine" battery and asked them for the long term float voltage and
set it to that.

I *still* have to monitor the liquid level, but it does not disapear
anywhere near as fast now.

In rec.radio.amateur.equipment Vito <vito@crosslink.net> wrote:

Milt, the FAR hamfest moved from Gaithersburg to Bowie MD. It's still
pretty big.

Frankly, I think you're rant lacks basis. Kenwood, Yaesu, and Icom
have been leapfrogging each others achievements for years. To say
that the other's stuff is suddenly "boring" says very little about
what's coming.

In my personal opinion, they're all garbage next to the likes of the Elecraft K2. That's a REAL radio.

>great example. The Paragon was perhaps the best radio
>to ever come out of Tenn.

I have one of those "great rigs" from Ten Tec and the 1970s. The dynamic range was awful, the packaging was flimsy, and the radio itself was hardly a model of stability. This digital push button stuff is the future for mass produced radios. It's cheaper, more stable, and it frankly performs better than most mass produced analog gear.

Yes, you could build an analog radio with better overall performance than a lot of this new digital stuff. But you'd have to invest a lot of careful component selection and tweaking to get it running. And that would cost more, *much* more than you'd be willing to pay.

While criticism of a radio's performance/price ratio is valid, your notions of what's a good construction technique or design choices is pointless. Try building a few radios of your own before spewing this nonsense about other manufacturer's choices.

>I could not agree with you more strongly on the "trinket vendors"!
>If I am going to PAY an admission fee to a flea market (which is
>what Hamvention really is folks!) then I had better see stuff for
>sale that I DO NOT SEE at the local every-weekend flea market
>just down the road, where the admission and parking is free!!

Then don't spend any time or money on them. They'll get the idea and not return. The problem I have with your approach is that determining this sort of thing up front is fraught with problems and potential law suits. Your definition of what a "trinket vendor" is happens to be a judgement call.

>I've never been back to the hamfests that let these
>turkeys into their flea market and I never will.

Good bye.

>I could not make Dayton, and I really hope that
>it is not turning into another consumer
>products junk market dumping ground! It's bad

>then kiss the Hamvention goodbye. (please someone
>tell me these wristwatch-dealers did not show up and
>were allowed to set up and sell like they did
>someplace in NC last year!)

What's it to you? If you're offended, don't go. Did you buy any antique radio gear? Were you offended that they were there, even though we're talking about old radios which were left over consumer items from the 1920s and 1930s? Get over it.

If you don't support a hamfest by attending one, then, well, there's always E-Bay. Don't like them? Gee, Mr. Grouch, what do you like? This rant is like cursing at the weather. Grow up.

6468. Repair Advice, Alinco DJ-F1T / DJ-F1TH / DJ-F4T Series

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-24 15:14:07 UTC
From: "Paul W. Schleck" <pschleck@novia.net>
Message-ID: <3cee5830$0$32913$45beb828@newscene.com>
Source record: 43222

I have an Alinco DJ-F1TH 2-Meter (144-148 MHz) Handy-Talkie (HT) radio which has what I would guess to be a common problem. Specifically, if it is dropped in a certain way, the top retaining clip for the battery (molded into the plastic case) will break off and the battery will not stay seated (unless you put a rubber band, etc., around the HT). Fortunately, this clip isn't molded into a monolithic case. Rather, it appears that the molded top retaining clip is part of a smaller piece of plastic on the top of the HT that incorporates the knob and antenna holes.

The part is #KU0075, and is available from Alinco for $3 + $5.50 shipping. No problem there. The problem is how to get it off (as well as the reverse problem of getting the new part on without breaking it). As this is an old radio (first came out in late 1991), I'd like to avoid sending it in for service ($60 minimum shop charge). The PDF service manual is available on-line at:

http://www.alinco.com/pdf.files/Service/djf1ser.pdf

but it does not contain any assembly/disassembly instructions other than an exploded view diagram (and the KU0075 part is shown in this diagram still attached to the inner frame of the unit). A check of the Google newsgroups archive at:

http://groups.google.com

didn't find any previous posts on the subject. Alinco customer service at:

alinco@alinco.com

hasn't (yet) replied to my question about this.

I can open the two halves of the shell per the user's manual. I don't see how I can get the top piece off without removing the BNC connector (i.e., it has a lip wider than the hole). I don't see a way to remove the BNC connector without desoldering it, and even then, it isn't clear how to get it out of the hole. Is there some kind of "trick" to removing the BNC connector or the top part of the case via other means (i.e., does the BNC connector unscrew or otherwise have some sort of lock ring or tension clip on it)?

Industry standard float voltage is 2.3 volts per cell.
That's 13.8 volts for a twelve-volt lead-acid battery.
We use 54.something volts for a 48 volt string in telecom.

Title: 74th Annual Atlanta Hamfest!
Event Type: Hamfest
Description: Welcome to the 2002 Atlanta Hamfest, sponsored by the
Atlanta Radio Club, W4DOC, and the American Radio Relay League.
Now in it's seventy-fourth successful year, the Atlanta Hamfest is the
"must visit" amateur radio event for everone. This is one of the longest
running gatherings of radio amateurs for buying, selling, demonstrating,
exhibiting, swapping of equipment and swapping stories.

We will offer:

Large tailgate area
Plenty of free parking
20,000 square foot air-conditioned Indoor Market
37,000 square foot covered Outdoor Flea Market
Campsites, including full RV Hookup, for 44 hams
Educational forums and guest speakers
Displays and exibits
DXCC card checking
VEC license exams
Prizes
Food

See http://www.atlantahamfest.com for details!
Starting Date: 06/01/02
Ending Date: 06/01/02
City: Marietta
State: GA
URL: http://www.atlantahamfest.com
Contact: Chris Hutton, KF4YDF

Atrocities.... You mean like those committed during the Japanese
invasion of Manchuria in the early 1930's ? Rapes. Torture.
Massacres..... That sort of thing.

Is that why you changed the subject again. You start spouting your
strange version of WW2 history and then immediately change to an
entirely different conflict....

> Best regards, P.Thamm

As you may know,some of the manufacturers have proprietary chips and
just won`t sell or have them in many cases. I had to junk an older H/P
counter due to this problem awhile back. Give
www.studiosoundelectronics.com a try. LEE

Hello!

I am working on that 2m all-mode transceiver and have a trouble with
the transmitted power, but only in SSB (both USB and LSB) mode. I
have no documents about it so I would like to locate at least the
schematics. An scanned copy would be just fine.

Thanks for your help!

Regards,

JOSE

On June 6th, 2002 AT&T Broadband will restructure the configuration
of the
servers, which provide access to Usenet newsgroups.

As a result, you will need to update your newsgroup settings. If you
fail to
update your settings will be unable to download new messages, post
new messages
or post replies to existing messages to newsgroups.

For Outlook Express Users:

First, Remove (Rename) Existing Account (you must do this first):

1. Open Outlook Express.
2. If your folder list is not automatically displayed, select
the VIEW
menu, then click LAYOUT. Click FOLDER LIST, then OK.
3. Click the netnews.attbi.com folder to create a list of
newsgroups to
which you currently subscribe.
4. Select the TOOLS menu, then ACCOUNTS, then the NEWS tab.
5. Select netnews.attbi.com and click REMOVE. Click YES to
confirm.

Then, Create a new news account:
```

1. Open Outlook Express.
2. Select the TOOLS menu, then ACCOUNTS. Click ADD, then NEWS.
3. Type your name as you would like it to appear and click
NEXT.
4. Type your e-mail address in the format username@attbi.com,
then click
NEXT.
5. Type netnews.attbi.com in the news server field, click NEXT,
then
FINISH.
6. Click CLOSE.
7. A prompt to download your list of newsgroups will be
displayed. Click
YES.
8. Choose the newsgroups to which you would like to subscribe
and click
SUBSCRIBE.

Additional information on subscribing to newsgroups is available on
the AT&T
Broadband Online Customer Support Center at
https://help.broadband.att.com/faq.jsp?content_id=1731&category_id=68#configure

I guess most of the solid state kits are probably more practical than
tubes these days. But you can get a fair amount of power out of just a
simple tube setup. The problem is it's sort of hard to find tube parts
these days. Used to, any junk tv had most of the parts to build a
simple transmitter. "transformer, etc".
Just a simple 6v6 circuit as the one in the old 1949 arrl handbook can
put out a good bit of power compared to a QRP solid state kit. I built
two versions of that when I was a novice. With a single 6146 and a
capable power supply you can do an easy 50 watts output. This is the
main circuit behind an old heath DX-60 as an example. But these
days it's probably more practical to build a solid state amp to go
behind the solid state QRP transmitter. Either that or rebuild an old
boatanchor CW rig. There are loads on e-bay I bet. IE: heath
dx-20,40,60's. Viking rangers, etc, etc. MK

The problem with DX-20s, etc is their 'collector value' nowadays. They
used to be nice for a starter rig but nowadays that has gotten
impractical.
Somewhere on the web there's a set of good instructions to recreate the
Ameco AC-1...which these days might snatch $100+ on tha'bay.
As for a solid-state QRP rig, yes thats much easier but any significant
power requires a bit of savvy to overcome the homebrew oddities that
creep up in the amp stages, often at the immediate cost of a new
(expensive) power transistor. The plus side is that if you've never
worked QRP before you'll be thrilled at the contacts you can make with
one watt or so and thats a very rewarding experience.
All that being said, homebrewing a simple tube rig is probably the
better option if you have access to some junkbox parts. I'd stay away
from the old-timey one-tube jobs unless you just like the sound of a
chirpy signal...ie forget about the one-tube 813 MOPA designs.

Recommendations vary among battery manufacturers and even for models made by the same manufacturer. Get their specifications and follow them.

Remember that float voltage is temperature dependent, and the specified voltage usually is at 25 degrees C. For other temperatures, compensate according to the manufacturer's spec (-3mV to -5mV per cell, per degree C). If you see a lot of temperture variation, consider getting a temperature-corrected charger. Your batteries will last longer!

I have been going to the Dayton HV for 22 years now and I have seen allot in those years, but Ebay is ruining ALL hamfests. A couple of years ago a person with a very pronounced New York or Bronxish accent came to our local Cincinnati hamfest and bought everything in site that was reasonably priced. It didn't matter what it was. While at a table I overheard this conversation. Bronx "How much is this?" Seller "$50.00." Bronx "Not worth it. I'll give you $30.00" Seller "Wellllllll OK." The seller proceeds to bag the item. Bronx to friend while still in easy earshot of seller "I'll get $125.00 for this one at least on Ebay!" Resellers like this one are truly what is killing Hamfests. If I was the seller and heard this, why would I bother taking an item to any fest? I'd sell it on Ebay and pocket the $$$ instead of making someone else rich.

I've found that, for reasons that I don't understand, amateurs call all sealed lead-acid batteries "gel cells". All the sealed lead-acid batteries I've seen, with the exception of cylindrical Gates cells, have liquid electrolyte. Sealed lead-acid batteries with gelled electrolyte do exist, but they're relatively rare. So without other information, I'd assume that the Mendelsons "gel cells" have liquid electrolyte, not gelled.

I'm interested in early sunthesized amateur radio rigs.
Does anyone have any information on the Palomar Electronice PTR-130K
transceiver.

It was an all solid state transceiver made in the late 1970's. It was
synthesized
and tuned via an up/down toggle switch. The frequency was displayed
on a LED display.

Any block diagrams, schematics or other literature is appreciated.
I'll pay for copying and shipping costs.

Sure; But those are same guys that would buy up everything at opening first day and move it to their table and mark up 200%. And sellers like that either are motivated to sell or unaware of what they have to sell. Nothing has changed at all.

Hello,

I have several of these antique globe shape German triodes in stock.
It is directly heated, and has an European 4-pin base and about 12W
anode dissipation. The heater is 3.8V 0.72A, u=17, S = 3.0mA/V Max.
anode voltage is 400V.The valves are NOS, and very nice to look at.
You will find a picture at my web site. www.demostenes.no
Just search for RS 242 in the left hand corner.
Please contact me by e-mail if you are interested.

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway

6502. ANCIENT RIGS FOR SALE

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-25 13:09:46 UTC
From: Sidevalve <Sabbatai_zvi@hotmail.com>
Message-ID: <hb0veu0dhreqhd388ojlp4mt6rqbfdqij9@4ax.com>
Source record: 43107

FOR SALE:

Heathkit HW-17 classic 2m AM transceiver with microphone.
Dial glass is missing but otherwise very clean.
Pictures available on request.
Selling for $45.00 plus shipping.

Harvey Wells Bandmaster Senior TBS-50C all band AM-CW transmitter
In very good condition. Reported to be working when last used.
Front panel shows really nicely. Comes with a repro manual.
E-mail me for photos. Will sell for $135.00

CLASSIC 1940s-50s HOMEBREW TUNER.
What a beauty! Like a Johnson only better. You should see the
components and
the dials. This jewel has all heavy duty components including a
dandy of a roller inductor with turns counter, The variable capacitors
are
pretty large and looks like it would handle a kilowatt with ease.
The versatile circuit is configurable for either series or parallel
'T'
configuration. Has jumpers in front to change set-up easily.
Has built-in SWR bridge utilizing an E.F. Johnson meter with
controls for FWD, REV and gain. Case is made of hammertone finish
steel
with a removable lid. There is a small chip out of one of the knobs.
Otherwise it's excellent. E-mail me for photos.
Will sell this gem for $175.00 firm plus shipping

Heath HW-202
Classic Heath 2m FM mobile transceiver with plenty of chrome.
Comes with the microphone. Comes with the ORIGINAL (thick!) manual,
original Heath microphone, cables etc.
Has crystals in it for:
146.07 / 146.67
146.16 / 146.76
146.22 / 146.82
146.34 / 146.94
146.94 Simplex
Pictures available on request.
Untested - selling for $39.00 plus shipping

Heath HD-15 Phone Patch. Unit is in top condition
with all original knobs etc. Pictures available on request.
Reduced to $19.00

Yaesu SP-901P Phone patch / Speaker Accessory
Perfect to round out your FT-901 line.
Unit is in excellent shape but needs two small scratches touched up on the top. Front looks great, including the original knobs, meter etc.
Pictures available on request.
Will sell for $45.00 plus shipping

Homebrew AM transmitter with 1625 final plate modulated by a pair of 5881 tubes. Good iron inside.
Made from a nicely modified ARC-5 transmitter conversion job.
Has an older style 4-pin mic input, gain control etc. etc.
Appears to be made for 40m band and it has final tank of 17 turns silver plated copper 16-18 gauge wire on a 2" diameter ceramic form.
Pictures available on request.
Available for $25.00 without the two 5881 tubes or for $35.00 with them.
Shipping additional.

My favorite place to get channel elements is Channel Element
Headquarters
in Cincinnati, Ohio. 800-237-9654 They are a clearing house for
trading used channel elements. They test and warrenty every element
they ship.
The other choice is to send elements to a crystal manufacture and have
them re-cystalled. Someone like International Crystal Manufacturing
800-725-1426. This take longer and is more expensive.

With the disclaimer that I have only returned 2 meter and 440 Mitreks,
when I looked into it, it appeared you could simply follow the
Motorola
tuning procedure to re-tune it.

Don't even bother!!
I WAS at Dayton, and those "new" batteries had not been charged for 4 YEARS(at least that was what I was told by a Mendelson employee).
So new, means NOS, but with SLA batteries, if you don't charge them once in a while, they lose much of their capacity.

Hey Ken,

I saw a mod somewhere on the net, and I can't find it, I just opened up the TX range though, it did involve the dip switches under the cellular warning sticker.

I was doing a search on groups.google.com with the words vx7r.

Sorry, I will let you know when I find it.

My New vx7r Radio comes in on Thursday!

What is the Freq Counter range on the radio?

I recently went through what you are going through, selecting radios for disaster communications.

I have selected the Icom 706MKIIG as our Base Rig. We selected the Yaesu VX-7R as our HT.

It was a hard call between the Yaesu FT100D and the ICOM 706MKIIG as both are great rigs.

We also bought small random wire tuners because we use NVIS (Near Vertical Incidence) antenna's for these rigs so that we can be more field deployable.

For a case we chose to use http://www.mountain-ops.com, they have a nice series of cases for the FT100D and the IC706MKIIG.

We also purchased the internal SSB Filter for the IC-706MKIIG.

For HT's we had the Kenwood TH-79's but just recently upgraded to the Yaesu VX-7R's, because of there small size, ruggedness, and Especially Expanded Frequency coverage, which I believe could be invaluable in a disaster to monitor Public Services. This is also why we went with the ICOM 706MKIIG's

Remember to do the appropriate amount of research on antennas, and operation procedures as in which frequencies to use and when.
I take it that you live in the same area of the country as your fellows in congregation.

I can not state this ENOUGH, YOU MUST DO RESEARCH ON ANTENNAS and HAVE AN OPPS PLAN.

An NVIS antenna will allow you to communicate with some locally on an HF band, instead of trying to talk to some one if France that can not help you. Here are some links to get you started.

http://www.tactical-link.com/field_deployed_nvis.htm

http://www.emcomm.org/svares/projects/nvis1.html

http://www.emcomm.org/svares/projects/

My wife and myself each have one of the Icom's 706MKIIG's and Yaesu VX-7R HT's.

Remember to get a frequency list, and an Opps list together as just having the hardware, will not cut it when it comes time to use it.

I would especially be able to monitor Fire, Police, FRS (Family Radio Service), GMRS & CB as this is how the other half of the world will

communicate.

<an inferior product for less money>...

There's no comparison between the all-metal units you see for four
bucks, and the product that Gulyas offers.

Gulyas' adapters are tailor-made for different HTs - they take into
consideration the minor differences in spacing and are vastly superior
to the "all metal" units available elsewhere. They protect your HT's
antenna connector by providing "shock absorbtion" spacers that
custom-fit HTs.

No - you won't be pleased with the VX-7R if you desire serious 220 performance.

But if you like to edit your own icons...set up an LED to one of hundreds of colors for each band...create your own fonts...have a simple freq counter...and more - you'll like the VX-7R. It is a tinkerer's delight.

Clint,

The Maha products are quite nice but you seem to be in the business of promoting products rather than technology. The Maha 777plus is a nice product but not a very effective Li-ion charger at the price point.

It is kinda like your comments on the F6 Yahoo Group that your three F6 receivers don't overload easily when connected to a rooftop 1/4 ave antenna because you can "hit the repeaters" quite well. Probably a valid response but it had nothing to do with the overload issue being discussed.

I am quite familar with the Maha charger line but I am looking for other solutions that are specifically suited to Li-ion charging.

Thanks again - Mike - K9JRI

One tube MOPA?

A Master Oscillator plus Power Amplifier transmitter would be at
least 2 tubes, unless you're using a dual section tube, which the
813 is not. A one tube transmitter would simply be a keyed power
oscillator.

Even MOPA designs often have some pulling (chirp). A better
minimalist design uses 3 stages, oscillator, buffer/driver, and
power amplifier. The buffer/driver isolates the oscillator from
the keyed amplifier stage, reducing pulling problems to near nil
(except for power supply sag, but that's a different issue).

From: Mark Jeghers <mark@t4pNOSPAM.com>
Message-ID: <XEYH8.22312$%y.2182196@bin4.nnrp.aus1.giganews.com>
Source record: 43132
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment

When I go into "remote entry" mode by pressing

[F] + [CONT SEL]

...the S-meter blinks as it should to denote remote entry mode. But when I press keys on the keypad they do not do what they should. Most often they simply cause the display menu to toggle between the regular menu and the "F" menu.

Anyone recognize this problem? Anyone know a fix?

Thank in advance,

Mark

6529. Help With Reprogramming M27256FI eEprom

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-26 05:34:48 UTC
From: Doug Gavilanes <gavilan1@earthlink.net>
Message-ID: <3CF073D7.EDF32F70@earthlink.net>
Source record: 43134
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

Greetings. I have a just few eEproms (bought from Pac-Comm) trying to run some Pac-Comm Tiny-2 TNCs, also bought from Pac-Comm, but for some unknown reason, the TNC will reset and the eEprom will lose all user parameters and revert to default settings. This takes me off of the air, as I'm trying to use one for APRS, but I can't keep one up for more than a day or two before the default settings reappear. I have spent hours with them on the phone teching the problem, with no success. Does anyone out with a programmer for this old IC have the ability to reburn this eEprom with my user parameters written into the default, so that when the unit resets, it will still be in an "on the air" capable APRS mode? I need to edit in about 12 settings or so, and since I bought these eEproms from the TNC manufacturer, I don't believe that editing and reburning the eEproms would be infringing on their copyright. Any help here appreciated. Please reply via e-mail to gavilan1@earthlink.net.

I know that this receiver from 0,03 to 30 MHz has 11 RF filters
(3 low-pass and 8 bandpass).
When I tuning from 0,03 to 30 MHz, ONLY at 15 MHz the double click
of the change of filter is audible and for an instant the green led on
the front panel is off.
Is it normal or this means that the other filters are not activated?
Thanks to everybody.
Aldo Briga

Yep, you can find them, but I didn't know if he want to or had close
access to any hamfests. I guess most do at some point in the year.
Most flea markets and hamfests will usually have loads of junk parts
laying around for cheap. Many times people will drag the stuff out to
sell, and end up giving it away just so they don't have to haul it
back home. MK

If your read again the posting to which you replied, you will see
another reason for 'pulling' other than the number of valves in the
transmitter lineup. You power supply could have been poorly regulated.

Do you still pull?

It was a Geloso VFO into a single valve PA (a single 807, I think).
Yes, it did tend to be chirpy! A buffer stage between the Geloso unit
and the PA would have helped.

I have for sale in excellent condition which is 1 year old a Cushcraft A270-10S dualband beam....Its a 2 meter/70 cm yagi antenna and covers 144-148 / 430-450 Mhz. The boom length is 6.17ft and the forward gain on both bands is 10db. It has all stainless hardware and still shines like new......I will take $50 plus shipping. AES sells them new for $99.99 plus shipping. So here is a chance to get a fairly new antenna for half the price of a new one. The reason for selling it is that I went with a bigger beam for seperate bands.... I can be reached at (508) 821-2993 or email...WZ1U Steve / Lakeville, Ma.

MOTOROLA GP300 VHF W/ EXTRAS - NO RESERVE

You are bidding on one, Motorola, GP300, 8 channel, 5 Watt, VHF portable radio. It is model # P93YPC20D2AA. The radio is used, but has been re-housed and checked by a local Motorola Authorized Service Center to meet all factory specs. Included in the auction is one Motorola Speaker Mic, HMN9030A, in perfect condition. Also included, but not pictured, is one, single-unit charger - BRAND-NEW IN THE BOX!!! The battery is Intrinsically Safe, in excellent condition (according to the Alexander Battery Analyzer), with a year 2000 date code. I prefer PayPal, but will accept Billpoint, Money Orders, and Cashiers Checks. NO Personal Checks. Please feel free to e-mail me with any questions. Winner must contact me within 24 hours of auction close. Good luck and thanks for looking!

Hi All,

I have an Alpha 78 amp that I've owned for about 15 years. It has had minimal use in those years. It has the typical Alpha 78 sticky face paint, but now the entire case has become sticky. I know that Alpha Power offers a new face plate, but is there anyone that has a cure for the sticky paint ??? Alpha does not offer a new case.

Thanks,
****

You really have to know what you have before you can know
how to maintain them, or if they are compatible with your usage.

REAL gel cells are plentiful and available in a variety of AH
ratings. And most do not leak at all, even if turned upside
down.

Maintenance Free car batteries often use a calcium
additive that reduces the electrolyte loss and allows a greater
margin for overcharge. This doesn't hurt the ability to supply
adequate starting power, but makes for poor deep-cycle
performance, and recovery after a deep cycle. They also tend
to leak at the post, making them no better than a REAL deep-
cycle Marine or Golf cart battery that allows you to add water
as needed. BTW I have seen Golf cart batteries on sale at
CostCo for a great price.

All I was stating, was that if you were for some reason forced
to use a car battery, you would be better off with a Marine/starting
or RV battery, than with a stock type car battery.

However, I don't see why anyone would want to use a stock type
car battery unless they had a bunch of junk cars in the yard, and
a low current drain accessory to run, like an old CB or 8-track
stereo, because stock type low-maintenance or maintenance-free
car batteries don't keep well in this kind of operation.

Briga;
Those filters are switched with PIN diodes and shouldn't make a sound.
Mine tunes smoothly across 15 MHz without a gap. I do hear a very small
pop tuning around 15.036, possibly a change of PLL loop.

Are you having reception problems? There was a bulletin about power supply
filter caps being weak causing reception problems.

Thanks for the tip on Cadex Electronics. They have an interesting web site.

My resources are varied but include Bell Telephone Labs documentation (I am a retired 30 year Bell System power and radio engineer), Panasonic, Matsuhsita (spelling?), Lenmar, Delco, Sony, MAX integrated circuits, Motorola and American Micro Devices. Many of the current battery manufacturers and those that support charging circuit development (charge controller chip manufacturers) publish a great deal of information on the web.

Many integrated charging circuits are currently available as are Li-ion specific chargers from various manufacturers. Those designed for consumer electronics are relatively cheap while the universal "charge everything" chargers are both more expensive and less capable. For me this is a more of a technical exercise regarding Li-ion charging rather than a question of "what to go buy".

I believe that it is possible to build a vary high quality Li-ion charger specifically tailored to the Kenwood TH-F6A battery pack for under $25. It will be a fun poject and one that would interest TH-F6A owners that still enjoy constructing as much of their accessories as possible.

Are you an engineer with Cadex or are you in some other area of electronics?

Additionally this amplifier is illegal to sell or offer for sale in the US, according to FCC regulations part 47 section 2.815. Virtually no amplifier capable of gain (>0db) between 24 and 35Mhz can be legally offered in the US. There are additional restrictions on offering amplifiers that can be driven with low power. This amplifier is clearly illegal for sale in the US.

The following is from excerpted from the relevant section of US Federal Law.

[Code of Federal Regulations]
[Title 47, Volume 1, Parts 0 to 19]
[Revised as of October 1, 1999]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR2.815]

[Page 552-553]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 2--FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS--Table of Contents

Subpart I--Marketing of Radio-frequency Devices

Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power amplifier is any device which, (1) when used in conjunction with a radio transmitter as a signal source is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

Assuming you're licensed as an amateur operator, go to
http://www.tentec.com/Amateur.htm and click on "kit selector." They have a
number of inexpensive CW transceiver kits for less than $100. Not sure what you
mean by "powerful" but these low-power kits can work the world when conditions
are right, and you have a decent antenna.

That doesn't match my experience.

I've powered an 100-watt HF transceiver, a 25-watt VHF transceiver, and
an AM/FM receiver (for easy listening), plus occasionally even the lights
(when the mains are off) in my shack for over 25 years using stock lead-
acid batteries from my local discount store. They last about as long
(3-5 years) in my "shack" as they do in my automobiles.

I have a "sick" Kenwood TS-530S HF Rig... It quit transmitting during a special event station exercise on Saturday- Turned it off and after it cooled down, was OK again. Then yesterday, the Rig seemed to lose Drive (12BY7A tube). Replaced Driver and Final (6146B) tubes and worked OK for a few minutes- then lost Drive again. I still have HV and the tube filaments are still on... Anyone have any thoughts??? Any hints would be appreciated!!!

I always discuss British atrocities in NI.
Also those in the Malvinas squabble, where
evidence of Brit war crimes was not brought to
trial, not because of any lack of evidence, but
because of a pompous outcry; pomposity and indignance
that Brits could be anything like Nazis, even thought they are.
Still, after 50 years of parasitism, jumping to the
front of the queue in taxpayer-funded hospitals and
yet paying no tax, we now know that heads-of-state
are not immune to prosecution, Clinton, Milosevic; and
so it can be only a matter of time before Lilibet Windsor
is brought before the International Court for all the
atrocities for which she has been responsible.

Brit and the USA are an equally evil and hypocritical
alliance when it comes to murdering their fellow man
on the most trivial and preposterous of reasons.

>Anyone want to offer any tips on taking this rig with me?
>

Depending on the area you live.. I used a Train Makeup Case purchased at Sav-on drugs for about $10-$12 and place it inside. The Rig is indestructable (Mine has hit the pavement twice with no ill effects), so packing it in your carry on with the antenna off should be ok.

A Heathkit AT-1 transmitter, used, from Crabtree's Electronics in Dallas for about $20. Also, a National SW-54 receiver, possibly confiscated from the Air Force in San Antonio, where my brother was stationed.

I eventually replaced that National with an ARC-5 receiver, about $7 from Crabtree's surplus department.

Howdy,

Does the automatic antenna tuner work on six meters the same as it does on HF?

I have heard conflicting reports on the AT operation. I have a TS-690 with AT installed but of course it doesn't work on 50 MHz.

Due to a lightning strike I am thinking or replacing the 690 with the 6-m version of the 570.

Any comments about the 570, good or bad, are welcome.

I was using my Alinco DX70T this morning and I lost power. I thought I blew a fuse but after checking the fuses and the voltage from the power supply the radio will not turn on. I can hear a relay picking up when I depress the power button, but still no power. Was wondering if anyone has had the same experience and if there is a "fix" I can do myself. I really don't think the radio smoked and am hoping there is some sort of reset I can try. thx, Mark W3ILT

Hi,

Maybe because they are very cheap? Here a new 12V 45 AH 'car' battery costs about 24 euros (~22 US$). A 12 V 7AH gel 'alarm' battery costs approx the same. A 12V 35AH gel type is >120 euros (>110 US$). Surely the gel type will be much more adapted to deep cycle conditions, but the price difference more than compensates for it. Of course, car batteries are much heavier, bulky and inconvenient to work with, but, if you have the place to put them, I think they are better.

I do not know the prices of marine / golf / etc batteries, but given the equation "price = K / popularity" (where K tends to large numbers) I think they must also be quite expensive.

Could be a few things. Dirty bandswitches can cause that at times.
Wiggle them and see if it kicks in. It's possible you could have loose
resistive tube pins on the driver tube. If this is the case, wiggling
the driver tube will cause it to go off/on. If the pins are resistive,
you will need to resolder them. There is a trap door under that socket
for access. I'd go though and check all boards for loose grounding
screws, plugs, etc, etc. Dunno, it sounds about a 50% chance you have
driver tube pinitus. I had to fix that on my TS-830 once. MK

B&W Low Pass Filter - FL10/1500 - Ebay

This filter is in excellent condition. It is rated at 1500 watts.

For those who aren't aware, the purpose of the filter is to prevent the unintended transmission of signals (harmonics, for example) above 30 megahertz (10 meters). The filter is placed between the antenna and the output of the transmitter (or transceiver). Aside from helping to comply with FCC regulations for signal quality, it will prevent certain types of TV interference.

Biddle Megger - Insulation Resistance Tester - Ebay

This is a very nice meter, with the hand crank. One end of the scale is labeled in thousands of ohms, and the other end is labeled in megohms. Test leads are attached on the side, while depressing the black buttons on the front, a very nice design. The meter is in very good condition, as is the metal case. Shown below is the meter, and the meter inside its protective metal case.

Performance: I'm not a Biddle expert, so I've run some tests with the following results.
- When I turn the crank at 1 rotation per second with no load, I measure 220 volts.
- When I turn the crank fast with no load, I measure 420 volts.
- When I turn the crank fast with a 220K-Ohm load, I measure 230 volts.

- When I connect a 220K-Ohm resistor, the needle points directly at 220K on the scale.

I was told that this unit should put out more than 500 volts. That being the case, I'm selling the meter "as-is".

I'm also including a neon bulb and the 220K resistor that can be used to verify calibration. Also included is a 13 page technical discussion on insulation testing and meggers.

For those who aren't aware, a megger is a resistance checker which performs its test at a very high voltage, depending on how fast you crank.

I've repaired several 232's and this one is a new problem. I'd check out the
+12 and +5 volt supplies as the unit heats up. Could also be trouble in one
of the adaptive filter chips, you'll need a scope to see the waveforms. Also,
check and see if the lights on the front panel are still lit when it crashes.
Dont
think there's trouble in the CPU, but wouldnt hurt to see if the clock pulses
are still driving it. If the master osc was getting weak, the system would just
go away when it quit pulsing.

Good luck, I'd be glad to help answer questions if you'd like.

True.

> batteries I've seen, with the exception of cylindrical Gates cells, have
> liquid electrolyte. Sealed lead-acid batteries with gelled electrolyte
> do exist, but they're relatively rare. So without other information, I'd

Not at all rare.

The typical "maintenance free" lead acid is not sealed and will
spill in some positions, and they do vent under hard charging.

The true sealed lead-acid can be operated in any position (will not
leak) and does not vent unless severely abused (venting is a last
chance method to avoid a case rupture, similar to nicd/nimh).

I have only seen two technology types of sealed lead-acids. The
gelled electrolyte type is by far the most common. The other is the
starved electrolyte, typified by the Absorbed Glass Mat (AGM)
batteries like the Optima yellow or red top or the exide "6 pack".

The gelled cells are a fraction of the price of AGM cells. They are
found in alarm equipment, "portable jump start" power packs,
children's rechargable riding toys, emergency lighting, rechargable
lawn and garden equipment, consumer computer UPS systems, etc. In
other words, nearly everyplace which needs higher capacity than a
small nicd pack, and where the weight of lead-acid is tolerable.

The typical yeasu 12v/7ah/$20 "brick" is a gelled electrolyte, and
probably the single most common sealed lead acid battery in the US.

> assume that the Mendelsons "gel cells" have liquid electrolyte, not
> gelled.

I wouldn't. But $16 is a very good price for new 12v/17ah gelled...

Ah. That explains the low price. :(

> So new, means NOS, but with SLA batteries, if you don't charge them once in a while,
> they lose much of their capacity.

If sitting for four years, I'd expect them to be almost but not
quite useless because of extreme sulfation. A couple more years of
sitting and that would be the end of them. A year or two ago I
purchased a UPS "new in box" which had been sitting since 1994. It
contained four, 6v/4ah gell cells. Of those four batts, three of
them would not charge above a fraction of a volt. the fourth
charges to about 2.1v, with nearly 0Ah capacity.

I sure hope the Mendelson batts are better...

Of course you may be able to recover the sulfated batts, but I'm
skeptical. http://www.shaka.com/~kalepa/desulf.htm

Well I have one. I'm not terribly pleased with it. It works just fine, no complaints about that. However, the construction is very cheap and the headband squeaks where it attaches the earpiece. It is bad enough to trip the VOX, and all it takes is for me to move my jaw just a little bit so that the temple muscles flex..

Heathkit DX-60 and a Knight R100A. I never got it on the air. My Dad gave me $20 to go to the Sullivan IL hamfest. I told him I was going to buy a receiver. I was very proud. I had gotten a transmitter and a receiver for his 20 bucks. He didn't see it that way. I had only told him a receiver. Had to sell'em both. Never did understand that one. Got on the air 8 years later (after 3 yrs in the service and being married) with a Knight T-60 (rock bound at 7120) and a BC342-N. That thing had a solid copper case!

=========
1) As Roy Llewallen commented in an earlier posting ,a Sealed Lead Acid (SLA) battery is not necessarily a Gel- type.

2) An SLA 12v-18Ah costs approx US$ 25.- (in the USA)
In the UK ,Mainline Surplus -Leicester sell SLA 12V- 18Ah ,make Kiel (New Old Stock) for GBP 12.50 incl VAT= Value Added Tax) equiv to approx US $ 19.-
I have quite a number of these in the shack and am quite happy with them.

For golfers in the UK : This battery is very suitable for an electric golf trolly. I recently replaced a Yuasa model: NPC15-12 , 12V-15Ah SLA which had been rather active for the past 3 years ,by the above make Kiel battery having identical dimensions . The old Yuasu battery has been retired to the shack where it still performs well be it on loads somewhat lower than a golf trolly motor .

3) The 'cheap' car batteries referred to in the above posting might not be the sealed type .In that case it would not be advisable to have them located in the shack , for safety reasons ....because of hydrogen/oxygen venting. Venting batteries with removable caps for water top-up must be located in a well ventilated area !!

I don't think the people who responded to you know what they have...the HM-i definitely doesn't have a "Headband" or an "earpiece" on it and its not made cheap. It's a desk mic of hi quality (identical in construction to the Goldline) with excellent audio on the "wide" setting. Forget the "narrow" setting. It's too mushy and Bob Heil says forget it also. Check the reviews on www.eham.net

>

Thanks for your help.

Alasdair, I took your idea of connection to the PC but actually connected 2
psions together via the null modem.
I discovered that I can connect the two using hardware handshaking and it
works well. So the problem was with the TNC - I think!
However, using software handshaking between the 2 psions neither recognises
a capital "N" transmitted. This must be some quirk of software handshaking
(? only with the psion) i.e.there is some bug with the psion.

I did eventually get the psion talking to the TNC but I'm sorry to say that
I do not know how - something weird here!

Unfortunately I now find that although DCD indicates incoming packets on the
TNC there is nothing displayed when monitoring on the computer (or psion).
I have another TNC which works fine when I use it as a replacement in the
same setup. I'm almost at the stage of giving up. Arghh!

Anyway, thanks again

David.

I have for sale a clean 16 channel Motorola GP300 UHF currently programmed on the ham band. The radio is very clean and comes with 2 batteries and the rapid charger. One battery is a few months old and the other is not that great. I will ship for $225. Thanks, Mike mfunaro@worldnet.att.net

6624. Bicycle Mobile - Need some advice

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-27 23:05:00 UTC
From: John Woodstock <jwoodstock@spamcop.net>
Message-ID: <1sduca.4ri2.ln@threeone.woodyware.com>
Source record: 43027

I tried Bicycle Mobile for the first time on Saturday. It was great..

I tried it with an old dual band HT and a standard speaker/mike.

My local cycling club is having a ride this weekend (June 2nd). I'm likely going to be on the road 4ish hours..

The feedback I received on Saturday lead me to believe the standard speaker/mike was not a good solution..

Two questions that I'd like to get some advice on:

1) What (headset/earpiece) / mike solution works best for Bicycle Mobile?

2) What dual band HT give the best mix of reliability, power and battery life?

Any input would be appreciated..

I had one of those units for awhile, until I scrapped it. The synthesizer had a problem. I looked like a good design, using a Mini-Circuits Level 17 mixer. Collins Mechanical filters were used for the SSB modes, while ceramic filters were used for AM and FM modes. I saved the Mechanical Filters; they appear to be the same ones that are used in the Racal 6790/GM. I hope yours works better than mine did.

What works "best"? A heaset/earpiece that you have modified to provide a push to talk button that you can reach on the handlebar easily. Having it "latch" (so you don't have to keep pushing down on the button) is even better. An old fashoned 'toggle' switch would work just fine.

A "latching" PTT someplace else than the handlebar is a lesser alternative. This is what I used when I did bike mobile. I used an Icom headset that had a momentary PTT *and* a latching PTT. So, at the proper moment, I could reach up, hit the PTT button then put my hand back down on the handlebar grip while I was talking. When finished I might have to keep talking for a few extra seconds until is was safe to take my hand off the handlebar again.

You also need to deal with how well your headset fits under your helmet.

While the 520s was my first new rig, my first station consisted of a Heath DX-100b and a Knight R-100A with a homemade mercury-relay T/R switch and the WB4VVF Accu-keyer built from plans in the ARRL handbook.

Made a lot of contacts that way... including one with a station in Grand Island, Nebraska who sent me a nice letter informing me that I was operating 5KHz outside of the Novice band on 40. Oops. I apologized and had both rigs calibrated, and stayed much more inside the band edges....

Source record: 43036

I have recently upgraded my laptop and have a very nice Dell Latitude CPx to trade for a Japan Radio NRD-535D.

This laptop has a P-III 500MHz CPU, 192MB of RAM, an 11.2GB harddrive, CDRom, Floppy with external connector cable, Ethernet PCMCIA Card, 56Kb PCMCIA Modem card, 13.5" Color TFT Active Matrix Display, Dell Laptop case and two high capacity batteries (both of which are brand new). It comes with Microsoft Windows 2000 Professional w/SP2 installed, but an original Dell Win2KPro w/SP1 CD.

Will trade even for a JRC NRD-535D HF receiver in good cosmetic and working condition. Must have a serial number above 56000 and the original 535D features installed.

From: Keith Beebe <keith.beebe@veri-nospam-zon.net>
Message-ID: <H3DI8.21052$Np5.12297@nwrddc01.gnilink.net>
Source record: 43040

I'm experiencing an intermittent problem with my new Yaesu FT-50R handheld.

Every now and then, on powering up the radio, the display comes up flashing (relatively slow flash). When this happens, it will not go into transmit, the monitor button will not open squelch, etc.

Powering it off and on does not help. However, removing the battery while the radio was on and then replacing it seemed to "reset" it.

Anyone have a solution?

>
>

First, check your 13 VDC supply to the PK-232. It should be greater than 13.0 volts DC when the PK-232 is connected and powered on. If it is less than that you may get erratic operation.

Next, check the internal voltages, +13, +5, +5BB, +10R, +10D, 10D. See the table in the schematic in your manual to find the IC and pin numbers for each of the voltages.

If you can't locate the problem, give us a call, it is much more efficient than email for loacating problems. Our number is 651-489-5080.

We repair PK-232s for a fixed rate of $75.00 + $10.00 UPS return shipping (unless they've been stepped on by an elephant, hit by lightning or have bullet holes - we seen all three!). Repair includes complete factory test and calibration.

As usual, I've got a lot to learn. What I've seen overwhelmingly at flea markets, electronics stores, and places like EH Yost are Panasonic SLA batteries. These are of the absorbed electrolyte type, in which the liquid electrolyte is absorbed into the plates and separators. http://www.panasonic.com/industrial/battery/oem/images/pdf/slaover.pdf discribes these units. In second place for the number of batteries I've seen for sale are the small Yuasa SLA batteries. I couldn't find a description of the electrolyte system in a quick search of the web, but an old data sheet I have describes the system as "suspended electrolyte". I've assumed that these are also AGM type, but perhaps I'm wrong.

I couldn't find any reference to Yaesu batteries. Perhaps you mean Yuasa. But I couldn't find a 17 Ah battery among their offerings. Do you have the part number of this apparently very common battery? I'd like to look at a data sheet to learn more about it.

Source record: 43046

Dear OM's.
I actually own a TS-570D and I exclusively trafic in CW. When I set the DSP on a very narrow
bandwidth, 60 or 100 Hz, it appears a resonance in the signal.
Until yesterday, I thought that it was normal. However, I bought recently a Yeasu FT-100D for
mobile use and tested his DSP in the same conditions. I was a bit disappointed to note that the DSP
is much more effective on FT, even with a 40 Hz bandwitdh, there is no more resonance.
The question is as follows: I own a TS-570D and not a TS-570DG. Is the DSP of the TS-570DG really
better? Do you note this resonance?
I am ready to pay the upgrade to G but only if it is really effective.
Thank you for your answers and please excuse my poor english...
Best 73

Mine was an early one and the finals and drivers went out to the tune of $350. Also the optical encoder froze plus I could never get the damn vox to work properly and the speech processor sounded like crap. Other than that it had a very good receiver.

It's long gone.

I understand the very lastest have an orange display with the meter still yellow. What kind of modifications were done to the finals?

Interesting I worked there for 11 years 1989 until 2001 doing product support and never heard of any recall. other than the P2 HT in early 1992. There were a few with encoder troubles that were some not being lubricated properly from the supplier. Replacement of the encoder solved those.

Gray, sharp appearance with PTT, excellent condition.
Great for use with any mobile station.
Will sell for $35.00 plus shipping

Icom mobile microphone, low impedance, smaller black rounded mic.
Picture available on request. No model number on it.
Will sell for $15.00 plus shipping

Heathkit mobile microphone, low impedance, black - Picture available
on request. Amazing low price (!)
Will sell for $15.00 plus shipping

Heathkit mobile microphone, low impedance, white - Picture available
on request. Unbeatable price...
Will sell for $15.00 plus shipping

Excellent low impedance dynamic BALL microphone - 600 ohms.
Recoton DMK-200 pro series dynamic microphone, unidirectional
with ball/screen type end.
Black metal finish. 80 Hz - 10 kHz response - has 10 foot cord.
Ideal for communications or vocalists / Public Address etc.
New In Box.
Will sell for $15.00 plus shipping

6647. Re PK88 problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-28 11:10:40 UTC
From: Bert <g3azi@btinternet.com>
Message-ID: <acvojf$1i$1@knossos.btinternet.com>
Source record: 42902

In reply to my request for help with my PK88 problem I received a number of replies - some on this and another Newsgroup and some direct to my e-mail address.

The suggestions (and my findings) included the following :-

a) to check connections from TNC to Radio; TNC to Computer Comport. (All OK.)

b) Power levels to and in TNC. (11.97 volts, 497mA in. 4.97 volts output from 7805 regulator.)

c) Contact 'Timewave' and 'Nevada' (neither of which were able to assist.)

d) A suggestion to check the reset circuit in the processor.(I did not know how to do this.)

e) Check the p.c.b. for signs of distress. (No evidence of any)

f) A suggestion that it might be in KISS mode. (I could not follow up since TNC was not responding to keyboard.)

g)Try PACTERM. (I didn't have it.I did try Hyperterminal with no success - probably because I didn't understand it!)

h) A late contribution suggested I download PKDEMO.exe from www.qrz.com/PKGOLD/ (I ran the program and on the TNC the 'Mult' led was extinguished and the 'CMD' led lit up.)

From there on I ran the paKet 6.2 program, typed a few asterisks (*) to get the auto-baud routine and "ORT" appeared on the screen. I read the info' on page G-2 of the Manual and all is now working as before.

I do not know what the problem was, nor what caused it, but if it happens again I know where to start - thanks to all you contributors.

If anyone needs further information on the foregoing please send me an e-mail directly or on the Newsgroup and I will be glad to reply.

List of contributors (in no particular order and I hope I have omitted no-one):-

K7UU, G0FZD, Nick, G8ASO, KB8MDF, G6TSF, K4PYT, K6RFK, KC2JGA.

My grateful thanks to all.

Best wishes,

Bert.
g3azi@btopenworld.com

Original message :-

Hello,

I have been using this AEA PK88 for over 5 years with no problems.

It has just now failed to perform!

At switch on only the 'PWR' and 'Mult' are lit.

The computer states it cannot detect the TNC. If I switch the program off and on again a row of letter Capital C with a 'tail' appears.

I have tried to get the 'Auto-Baud' routine to occur by changing my Baud rate and other settings to those mentioned on page 2-5 in the PK88 Manual.

I have changed the battery even though the existing one was only showing 0.1 volt less than the new one.

All to no avail.

Can anyone suggest any line of further investigation, please?

(I should mention that the PK88 was a gift from the USA.and so far I have found no Company in UK I could approach. Nothing 'Google' turned up seemed relevant.)

Best wishes,

Bert G3AZI

This 'flashing' is typical of a low battery condition. At least that's
what mine does when it's low.

yes thats correct. unfortunately gary
fiber still denies that were many
problems with the early 775dsp s.
all the problems you mentioned
were for serial number under 1500

6652. Program DIPCAGE1.exe

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-28 13:33:01 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <ad00uc$p2n$2@paris.btinternet.com>
Source record: 42907

NOW AVAILABLE "DIPCAGE1.exe"

RESONANT LENGTH, END-EFFECT, BANDWIDTH, INPUT RESISTANCE OF 1/2-WAVE DIPOLE.

This is a little more accurate version of WIRECAGE.exe which it replaces. It may be found easier to understand and use. It computes the resonant length, end-effect, bandwidth versus various SWR points, receiving 3dB bandwidth, center feedpoint input resistance at resonance, etc. Input resistance values are somewhat smaller than usually stated but this is not of great consequence since in practice there are a number of sources of uncertainty affecting this non-critical parameter.

The dipole conductor may be any wire gauge, rod or tube, or a cylindrical cage of any number of wires. The usual facilities are available to vary antenna dimensions and number of wires in small increments while observing computed output values.

This program is more of educational than practical value since it will be seen that at HF the trouble and expense of increasing antenna diameter is not justified by the trivial improvement in bandwidth which might be obtained.

DIPCAGE1 is contained in one 36.5 KiloBytes file. Download from website below in a few seconds. No unzipping inconvenience. Run immediately. Or it can be run without downloading.

>If I was the seller and heard this, why would I bother taking
>an item to any fest? I'd sell it on Ebay and pocket the $$$ instead of
>making someone else rich.

This is something illusory that I suspect will slowly disappear.
People forget the time value of money. Yeah, sure, they'll earn an
extra $20 here or $30 there --but how much did they shell out to get
that money? And what about the botched sales where they end up taking
a loss?

It may be true that the true flea market nature of Dayton and other
hamfests may slowly attenuate as time goes on. Further, as people get
burned more and more on E-Bay, I think that flea-markets will go up in
price because you can see and poke at the things people are selling
while E-Bay's prices will go down some. At a flea market you can
actually see what you're buying and you can pay for it and carry it
away on the spot.

And by the way, hamfests are not just about flea markets. Yes, that's
a big part of them. However, there are still symposia, VEC testing,
socializing, and yes, even operating various radios and the like.

I've got my 706 under the jump seat of my Toyota X-cab, and have had it there for years. Looked under that jumpseat a few weeks ago to get the tire iron, and there it was, covered by a fine layer of dust and hairs (dunno where they came from, I have no pets :-) -- still works as well as the day it walked out of the radio supplier with me. Had a few dings in it from bouncing around and being hit by other things I've thrown back there, so I did it a favour, and cleaned it off, fastened it down a bit better, and gave it a bit more room, ie: decided not to throw the tire iron there anymore :-)

I don't think ventilation is a big problem with this radio. There's not a lot of room under those jumpseats, and not a lot of insulation either. I'm sure it gets quite cold in the winter in that void, but I've never noticed any shortcomings in transmissions, etc.

So much for the old saw of "how they built it better back then..." heh? I have to commend Icom for building an absolutely great product, very durable, etc...

I think you are ok as long as you don't block the vent holes in the
case. The air is drawn in through the bottom of the case, and exits
the back heatsink area. The fan is in the middle of the rig. So the
main thing would be not to block the bottom vent holes, and don't
block the area around the back of the rig. MK

I've been using them for nearly 15 years here and no problems. Car batteries hold up fine as long as you don't overcharge them, don't let them discharge too far, and keep the water up in them. But I do prefer a marine deep cycle if I had my choice as their design suits radio use better. But a car battery will work just fine. I'm running a 706 on one right now. I use a fully automatic charger to keep the charge up, but a trickle charge will work fine as long as you remember to unhook it when you have a full charge. Heavily discharging a car battery will greatly shorten it's life and capacity. All long as you avoid that, you won't have much trouble. A deep cycle can handle heavy discharges better, but even with those it's best not to heavily discharge them. I never heavily discharge any of those lead acid batteries on purpose. Sometimes it'll happen though out portable etc. If I buy a new battery just for radio use, I get the big marine deep cycles. MK

Source record: 42921
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.swap

I am looking for the stand off that mounts at the top of each tower section
of a Hygain or Triex crankup tower. Stand off is galvanized with 1 U-Bolt
for attachment to tower,
and it is an angle or tubular rod to a V on the end to attach coax.
If you have one in good condition please let me know what you want for it.

I ordered one on the Hygain website this weekend,
to later find out that Hygain or (MFJ, Ameritron, Vectronics, etc..)
does not have these items to sell. They don't even have the
towers, yet they will be glad to process your transaction to your
credit card for something they don't have. There representative
had no idea this was on the internet, and they said it may be a few
years before Hygain will be selling towers again.
I sure saw one at Dayton with antennas on it !

Please send email to laborkei at hotmail dot com

Thanks..
Keith, WD5BJQ

Thanks John.

I just realized it could have been a battery situation shortly after posting my question and trying a few other things like monitoring the actual voltage in the sub-display. I had expected it to show the low battery indicator, which it didn't, instead of the flashing and lockup. Like I said, it is new and I'm still getting used to its operation.

Well, now I know.

I make my own, it's very easy to do and it also allows to attach a pulley on the opposite side for raising dipoles.

I bought (3) three foot 1" square steel tubing pieces from the local hardware store, along with three 3" "U" bolts, and three 2" bolt mounted pulleys. Drill the tubing for a "U" bolt on one end, and mount a pulley on the other. Then center the tubing against the top flat strap on each tower section and drill two holes through the tubing and the section top strap. Bolt it down, and you're done.

If you attach the coax only at the top standoff, and let it float in the "U" bolts on the other standoffs and it will go up and down with the tower and coil up nicely at the bottom of the tower, rather than having big loops of coax at each section when the tower is lowered. Also, you have 3 easy attachment points for wire antennas on the other ends.

Total cost was about $20.00 and 1/2 an hour to put them together...

That sounds right to me. Check if it gets worse when transmitting
(using more power).

Another possibility that would look similar would be dirty/oxidized
contacts between battery and radio.

6680. Visar in need of repair

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-29 02:32:52 UTC
From: Paul <pnelsonct@ameritech.net>
Message-ID: <o5XI8.5067$t%5.1833740@newssvr28.news.prodigy.com>
Source record: 42935

I have a Motorola Visar that is in need of repair. I replaced the housing and damaged the LCD ribbon cable. I'm pretty sure that replacing this will fix the problem. Is there any one out there that can order the part and repair this radio.

I am also looking to have this radio programmed.

Anyone out there have any experience with this radio.

Thanks,

Paul

6681. FS: ICOM 706 MKII

6682. HELP - Programming Johnson Challenger (7166, not the old HF rig)

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-29 02:43:25 UTC
From: spotcheck01@yahoo.com
Message-ID: <45cc179a.0205281843.3979bda6@posting.google.com>
Source record: 42937

I have a Johnson "Challenger Plus 242 7166", a VHF business band mobile, that I got from a ham friend who owns a radio shop. To make a long story short, he programmed the radio, dropping the VFO for use on 2 meters. I've since moved, and am looking for schematics for a programming cable and also programming software for this rig, as I'd like to use it in the shack for packet.

If anyone has any info on this thing, please post here and/or e-mail me directly. Any help appreciated!
73,
Doug, K4EK

6683. Re: icom 775dsp

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-29 02:46:04 UTC
From: "Gary P. Fiber" <foo@bar.invalid>
Message-ID: <ane8fusakb3oj4p0jfml0ud92bbmfu5vcd@4ax.com>
Source record: 42938

Repacks were demo units, show units, Units used on DX Expeditions etc. Icom America installed the DSP board into the 775 non DSP transceiver and sold them cheaper than the 775DSP. Lots of the repacks were the 775 without DSP originally from the factory The only difference was the front panel and a control or two was labeled differently.

The " Final trouble " was Q 32 on the RF unit would open due to some static discharge. Q 32 is the final amp coming from the RF unit that goes on into the pre driver and finals. With Q 32 being open one got the impression the finals were also out as there is no RF output.

I don't remember any specific modification to the final amplifier unit. We saw some finals go out, but generally that was due to operating into improperly tuned antennas or some static discharge like a dust storm, snow storm, etc. Nothing we could ever specifically pin point that required a modification to the circuit.

In the big picture of things less than 1% of Icom products sold are ever returned for warranty service.

I ever chatted with you I hope I was helpful over the years.

Message-ID: <l9g8fu8fdkorf7i4b31mick5bladsr4o3h@4ax.com>
Source record: 42939

" ORT " when running a ascii terminal program generally ment the unit
was in HOST mode. While the PK-88 is in host mode you can't command it
with a normal terminal program. Usually a Ctrl-C 3 times will get you
to the command mode. Not sure why you couldn't get to it with Hyper
terminal.
Glad you got it going.

Gary K8IZ

>From there on I ran the paKet 6.2 program, typed a few asterisks (*)
>to get the auto-baud routine and "ORT" appeared on the screen. I read
>the info' on page G-2 of the Manual and all is now working as before.

Source record: 42940

nearly none of the repacks that
burghardt got were 775 with the dsp
added.
so now we go from no problems or
mods to you admitting that there were
problems with q32. that is quite a change
from your original statement.
i just spoke with jim at burghardt
and he says the 775dsp was more
trouble prone early on (pre 1500) than
ANY of the other icoms.

i stand by my original postings that
serial s above 1500 were more trouble
free than the ones below 1500.

This has been a very interesting discussion. I learned more about the misterious 775 today than the past several years. Repairs and mods to this radio have been keep pretty much quiet.

By the way I know of one fellow who had at least two 775's and they both went to pot.

My finals went out after Q32 was replaced.

What about the metal tape on the vco box, what was that all about, the split problem?

Please keep it civil, I'm just trying to learn.

6696. Icom IC-2100H mic problem

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-29 09:59:28 UTC
From: Mike <mlaw3825@earthlink.net>
Message-ID: <4E1J8.11$xd3.5@newsread1.prod.itd.earthlink.net>
Source record: 42951

Just recently, my HS-98 microphone has ceased working. If I plug it in, the key pad lights up, but nothing works, and everytime a button or PTT is pushed, the red light lights up on the mic. Should I send it in and have it repaired, or should I spend the $90 to get a new one? Or does somebody have fix for my mic. Any help would be graetfully appreciated.

If this is the modular connector found on so many mics nowadays, look at
both the jack and the connector. Check that the pins are straight in the
jack and line up with the plug. Check the plug to make sure non of the
pins got bent or broken. I'm suspecting that's where the problem lies.

Since there seems to be a disparity between what e ham
and Gary have to say and since Gary no longer works
for Icom and since e ham has no special knowledge I
find no reason to believe them over Gary. I have met
and corresponded with Gary over the years and would
tend to take his word in technical matters concerning
Icom.

Lem this is a public discussion I don't want or need
private e mail about this subject.

You need to get the UX-14 interface. The original part is very hard to find
but there is a company selling an aftermarket version though. I do not
remember the URL but maybe someone else here could post it. 73

I couldn't dissagree more, , , , , ,

I have bought several radios on Ebay at prices that would blow your
mind. How about a IC-751 for $300 bucks? Works and looks like new.
I also bought an IC-=735 a year ago for $500, and it also was like
new. Yes, I had some minor problems when I first started using Ebay,
but you just have to learn the ways of bidding.

MY complaint with "new" radios is that the damn knobs are too small,
they seem to be built for midgets and children.

Anyway, Ebay is for INTELLIGENT buyers and can give some trerriffic
buys , , , , ,Just don't let the price get away from you. I find that
it is better to snipe. My 10 second bids have almost always won. and I
never, never, ever, raise my maximum spending amount.

I have a Icom 4SAT UHF Mini HT with original rubber duck, has small cut in antenna. And also comes with BP90
Alkaline battery pack. No bottom cap or manual. I recently purchased this unit and it works well, but unfortunately it doesn't cover any of the Amateur frequencies at this point. It was sent back to Icom and completely retuned for the business bands.
It currently operates from 450-480mhz. $145.00 shipped cont. US.
If your interested please email direct.
thnx

6707. How to choose a rig ???

Hello.
I would like to buy a good HF transceiver with built-in DSP,
especially for CW trafic.
I read many many reviews of these : FT-847, FT-920, IC-746, IC-746PRO
(nice but too expensive), TS-870S.
Lot of cons, lot of pros, I'm now totally confused...
Please help me to choose my future CW rig.

rec.radio.amateur.homebrew,rec.audio.tubes,rec.audio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hello,

PC 900 is a B7G base triode with a heater of 3.9V 0.3A, Va is 135V
Vg -1V Ia=11mA Wa 2.2W Ik=20mA max, u=76 and the gm is 14.5mA/V
A very promising valve to experiment with in low-level stages, both
audio and HF/VHF amplification. It was developed for use in VHF and
UHF television tuners. The low heater voltage makes it very easy to
use in an ordinary 6.3V heater system, just use a dropper resistor of
8.2 ohm 2W and you are very close to 3.9V

I have 400 pcs in stock and I will sell them at only $ 5.00 each or
$ 2.50 each if you buy 100 pcs or more. The valves are NOS, in mint
condition, original boxes and the label is Haltron. but they are
rebranded, and I think they are originally made by Philips or Siemens.
E-mail me if interested.

Best regards,

Arnold Goks&#65533;yr

From: David Hubbell <hubbell@ptd.net>
Message-ID: <3CF59459.D8E1D96F@ptd.net>
Source record: 42978

Hi John,
I use my Yaesu VX-5R with a Radio Shack Belt Holster(42-263@$9.99), Radio Shack(Headset adapter VOX box(21-1832@$14.99) and Jabra Boom Mic . The Jabra is the most comfortable ear phone that I have used. I attach the belt holster to my water pack. When hunched over the handle bars of my mt bike the antenna is almost verticle. I have found that if you attach the radio to the bike you will eventually brake the mic cable or worst, the rig. Having the entire thing attached to my back allows me a quick dismount, not to mention a fall that happens almost every ride. If you need to change freqs on a regular basis then I would suggest getting the arm band holster (42-265@7.99). I have used my Yaesu FT-530 with the remote view mic. This combination is great if you are changing freqs all the time. The battery drain is greater on the 530 than the VX-5R.

I have used the VX5 with the belt holster for most of my outdoors Climbs, Hikes, Ski Trips, and Raft Trips. I always have a water pack on my back or a napsack so the belt holster seems to adapt to most packs. The one draw back to the VX5 is that you need the Mic Adapter cable to interface the 2 plug mics. I tends to come unpluged if you do not tuck it in the leather case properly.

If you need a fixed mount on the bike then I would not use the head set but opt for the hand mic. I have plans for a great mono band ant. for the bike if you use the fixed mount. If you have a luggage rack in back and want avdual band ant., install a 1/2 wave mobile to it.

Have fun and let me know what you ended up with.

There are many ways to skin this cat, depending on power levels,
bands, etc. Some of us do HF, and that presents additional challenges.
I am a member of the Bicycle Mobile Hams of America and have to
give them a plug. Check out the links on the website for useful info:

6726. TS-570 transmit audio response

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-30 03:44:22 UTC
From: Peter Dougherty <ve3thx@nac.net>
Message-ID: <547bfu8bg6oj13ibp468l3ih2jrafg014m@4ax.com>
Source record: 42981

Hi Folks,

I just bought a TS-570D(G) at Dayton and first impressions are extremely positive in most respects. What a wonderful little powerhouse!

My only real concern, however, is the severely limited transmit audio bandwidth. I'm using an EV-635A (80-13k flat response) broadcast-news-gathering microphone connected to a W2IHY EQ, and at best, I'm getting flat, lifeless audio out of this puppy. At worst, mushy.

On-air testing shows the audio response seems to cut off around 350 Hz on the low end and 2800 or so on the top. No movement of the 50, 100, 200 or 3200 Hz sliders seem to make much of a difference.

Has anybody found a way to get around these factory limitations? I've tried the various TX-EQ settings within the menu (Format Pass and Bass Boost seem to be the best of the bunch) and I'm using no more than 5 dB of compression (only for DX), but still no lows are getting through at all.

Since I can't afford a TS-870 (or any of the other top-end radios) for a long time, I'd really love to be able to open up the audio a little bit on this 570. I really do love eveything else the radio does, and I sure hope there's a way to cure this short-coming. Any suggestions?

I live in the NYC area, and if somebody who's into audio a little would like to set up a sked where we could do a little bit of this in real-time, I'd be most appreciative. I operate 10-40 only (no 80 or 160 due to antenna constraints), and the radio isn't the 6-meter model.

Complete amateur satellite station for sale. This collection of gear (with your computer and software) will give you a complete, automated digital/analog satellite station. I (AD4HF, ex-WD4NAE) used this system quite successfully running WiSP (http://www.amsat.org/amsat/ftpsoft.html#win) before dismantling the gear and moving. The antennas have been stored indoors partially assembled. Because the antennas are not shippable, they must be picked up at my home. I live in Albany, Georgia (southwest Georgia). I strongly prefer to sell everything together and will consider any fair offer. "Plan B" is to list items separately on eBay, but I'd rather not have to deal with that.

I purchased all this equipment new. The electronic gear looks as good as new. The antennas show normal outdoor weathering, but work fine.

Included in the system are:

Yaesu FT-736R in immaculate condition with 9600 bps mods professionally done (no permanent mods - connections via a dongle - see photos)

AEA DSP-2232 digital signal processing multi-mode data controller

Kansas City Tracker/Tuner ISA controller card

Yaesu 5400B azimuth/elevation rotor and controller (also have an earlier Kenpro 5400 working rotor/non-working controller for parts)

SSB 2 meter GaAsFET mast mount receive preamp

70 cm mast mount GaAsFET receive preamp

KLM 435-40CX circularly polarized yagi for 435 MHz.

KLM 2M-22C yagi for 144 MHz.

two Down East microwave 1269 loop yagis.

Rohn 25G tilt-base tower section (home-brew hinge welded at base) with 25G top section.

Glen Martin Hazer for 25G tower with thrust bearing and heavy mast. (http://www.glenmartin.com/catalog/page10.html)

Fiberglass cross boom for mounting circularly polarized yagis

Assortment of coax cables for antennas, rotor control cables

Photos of the Yaesu FT-736R on my web site:
http://personal.atl.bellsouth.net/lig/a/d/adamsdw/yaesu_radio.htm

Photos of the AEA DSP-2232 on my web site:

My neighbors father just passed on and his son is asking me about some of the radio equipment that he had at his shack. All of the stuff he has is in great shape and wanted to know what they are worth. I found most of the info he needs except for the amp. Its a base station amp and the label says, B2500A Class AB Linear Amplifier. 275 watts P.E.P. 500 watts S.S.B. It has 4 switches on the front panel that read Power on, Rec-Amp on, AM SSB, Hi Low Carrier. What I am looking for is the frequency range and if possible the specs on it. I have a Yaesu FT-101EE to drive it and a big dummy load to check out the power, etc. If anybody can help I would greatly appreciate it. Thank you, 73, and God Bless, Bill KF6WXJ

I just went through the same process. Both Alpha-Delta and Polyphaser
make surge protectors with two SO-239 connectors and work for HF, in
the $40-$50 range. These are supposed to handle a direct strike, if
your ground is suitable. However, a suitable ground is a very big
deal -- like seven eight foot ground rods and very heavy braid.

I opted instead for the MFJ-1702C antenna switch with bult-in surge
protector, for $24.95.
http://www.mfjenterprises.com/products.php?prodid=MFJ-1702C

In the off position, the antenna is disconnected from the radio and
instead connected to ground. In the on position, you still have surge
protection which will handle the surges induced by nearby strikes,
just using the house ground. IMHO, this is really all you need unless
you have to stay on the air in the middle of thunderstorms.

I do not have this tool but I have made and used small homemade spanner wrenches.

1. Use two hard bolts or drill bit shanks of appropriate size that will fit into the slots. Anchor them securely with 4-40 hardware between two appropriate flat cross bars such as old six inch metal rulers.

2. If you have a piece of flat metal stock of the sufficient width (i.e.: one inch square) you can make a three point tool by drilling holes in it at the correct locations. Insert the bolts or drill bit shanks through the metal stock and anchor them with super-glue.

Perhaps someone else has devised a better substitute for this tool....

73 and good luck,

> somewhere that the Baypac likes loud audio from earphone/external speaker
> jacks. Can anyone confirm this? Thanks!

Go to <http://www.tigertronics.com/> and click on the BayPac Modems link
under "Support" in the left-hand blue column. They say:
"Many newer radios have a pin on the mic connector called "audio out".
If you use this pin to drive the BayPac, be sure it is "high level"
(speaker) audio. Some radios provide only low level (100 mv typ.) audio
output. This level is not nearly enough for the BayPac to receive
properly. If this is the case with your radio, you should use the audio
from the external speaker plug (or rewire the mic connector for high
level audio). The simplest way to check the audio level is to connect a
speaker to it. If it is loud like
the internal speaker, it is "high level" and will drive the BayPac
properly.

Howdy,

The published frequency response of the transmitted audio is 400 - 2600 Hz between -6 dB points.

Sounds like it's doing what it was designed to do.

Widening the FR would not be simple and it would increase the bandwidth of your signal and perhaps cause QRM.

I would suggest that you use the microphone that came with the rig for best results.

re: Want, 2 Channel UHF Maxtrac External Speaker Plug.

Hello there,

Thanks for looking at this post... I have a UHF Maxtrac 2 channel radio which has a 4 or 6 pin external speaker jack on the back. I bought the radio used, so I have no matching plug for said.

(It is not the dual 16 pin header plug as used on the 16 channel radios.)

If you have a spare plug or two that you would consider selling me, please drop me a note using the address below or take the NOSPAMPLEASE out of my Email header above.

If you have the Motorhead (motorola) part number for this plug, that would also work just fine. I can order it direct from them. I'd buy more than one if you have them.

Thanks much and I hope to hear from someone... please no other unrelated spam.

cheers

Also, a lot of operators (myself included) narrow their receive filtering to help eliminate the splatter and QRM from wide signals in crowded band conditions, so they wouldn't hear the difference anyway.

6748. LoJack vehicle recovery system and mobile transmitter problems?

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-30 21:33:45 UTC
From: Alan Beagley <abeagley@optonline.net>
Message-ID: <3CF69AB9.F17D8206@optonline.net>
Source record: 42853

Has anybody had problems with a LoJack vehicle recovery unit because of mobile amateur operation? -- either false triggering of the LoJack into transmit mode or overloading its input and frying it?

-=-
Alan

6754. Re: Back up Power

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-30 22:29:54 UTC
From: Roy Lewallen <w7el@eznec.com>
Message-ID: <3CF6A7E2.433AEFC@eznec.com>
Source record: 42859
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,uk.radio.amateur

I've just had some interesting and informative email correspondence with Sylvan Butler, N7OWL, about gelled vs absorbed-liquid (AGM) sealed lead acid (SLA) batteries. I had commented that batteries with gelled electrolyte are rare, despite the fact that amateurs call all SLA batteries "gel cells". Sylvan had disagreed, saying that gelled types were common and AGM types rare.

This, and our correspondence, prompted me to do some web searching, and I came up with the following:

One of the batteries I see very often is the Panasonic SLA. Its electrolyte system is described at http://www.panasonic.com/industrial/battery/oem/images/pdf/slaover.pdf. It's pretty clearly AGM type and not gelled.

Sylvan and I both agree that one of the most common SLA batteries encountered is the Yuasa NP series. He had taken one, or a similar battery, apart and found gelled electrolyte. But Here's what the Yuasa web site says about the NP series, at http://www.yuasa-battery.co.uk/NP_Batteries.html:

"All NP batteries utilise Yuasa's unique electrolyte Suspension system incorporating a microfine glass mat to retain the maximum amount of electrolyte in the cells. The electrolyte is retained in the separator material by miniscus effect and there is no free electrolyte to escape from the cells. No gels or other contaminants are added."

The vent is described:

"The batteries are equipped with a simple, safe low pressure venting system which releases excess gas and automatically reseals should there be a build up of gas within the battery due to severe overcharge. However, on no account should the battery be charged in a sealed container."

I downloaded the Yuasa NP manual. It uses slightly different wording to describe the electrolyte system:

"All Yuasa NP batteries utilise an electrolyte suspension system consisting of a glass fibre separator material. This suspension system helps to achieve maximum service life, by fully retaining the electrolyte and preventing its escape from the separator material. No silica gels or other contaminents are used."

So it's clear that the common Yuasa NP series is also AGM and not gelled electrolyte type.

In email, Sylvan commented:

I agree.

But I do know I've taken apart several defunct SLAs and found a pudding-like substance (usually visibly dehydrated and cracking) inside, under the epoxy or tar seal.

Looking at the www.yuasa-battery.co.uk site, they only mention AGM types of SLAs. They also refer to their "NP" family as "a new generation". I wonder if they used to sell gelled electrolyte a few years ago, but now are not?

There are a lot of advantages of AGM compared to gelled, so discontinuing gelled and replacing them with AGM would not suprise me. The only disadvantage would be cost, and that may be somewhat mitigated if (as some nations require) the manufacturer is accounting for end-of-life recycling.

--------end of comment-------

With at least the popular Panasonic and Yuasa types not being gelled, I'll stand by my statement that truly gelled electrolyte SLAs are uncommon, although they certainly do exist. Does anyone know of a relatively common type of SLA that really does have gelled electrolyte?

Roy Lewallen, W7EL

Title: 74th Annual Atlanta Hamfest!
Event Type: Hamfest
Description: Welcome to the 2002 Atlanta Hamfest, sponsored by the
Atlanta Radio Club, W4DOC, and the American Radio Relay League.
Now in it's seventy-fourth successful year, the Atlanta Hamfest is the
"must visit" amateur radio event for everyone. This is one of the longest
running gatherings of radio amateurs for buying, selling, demonstrating,
exhibiting, swapping of equipment and swapping stories.

We will offer:

Large tailgate area
Plenty of free parking
20,000 square foot air-conditioned Indoor Market
37,000 square foot covered Outdoor Flea Market
Campsites, including full RV Hookup, for 44 hams
Educational forums and guest speakers
Displays and exhibits
DXCC card checking
VEC license exams
Prizes
Food

See http://www.atlantahamfest.com for details!
Starting Date: 06/01/02
Ending Date: 06/01/02
City: Marietta
State: GA
URL: http://www.atlantahamfest.com
Contact: Chris Hutton, KF4YDF
Email: turtle@rawx.net

Source record: 42864

It is more likely that the oscillator for LSB is not functioning properly.
The failure could be caused by numerous problems from a cold solder joint
to a mode switch problem.

Check the oscillator and mixer signals throughout the signal paths
with a frequency counter or scope and you can probably locate the cause
fairly quickly.

73 and good luck,

WA5VRL
Willis

Message-ID: <iUAJ8.46576$R_4.4904@nwrddc02.gnilink.net>
Source record: 42867

Well, this turns out to be more serious than first thought.

The problem continues: on power up the display goes into a slow "flashing" and virtually all functions cease including transmit. etc.

This is NOT a power problem. The radio exhibits the same behavior with several fully charged batteries and even a test using the battery charger as a receiver power source (with the battery removed). The voltage is being monitored in the sub-display.

A call to Ham Radio Outlet (HRO) where it was purchased confirms other radios have had the same problem. They say it is a failure of the Phase Lock Loop (PLL) to "lock" on power-up. Sometimes it does work.

The radio has since been returned to Yaesu for service under warranty or perhaps even replacement. Sure am glad I kept that trusty old ICOM IC-2AT as a backup, at least for two-meters (just can't seem to part with it).

Thanks for all the comments.

Troubleshooting is a bit easier when you are in the same room as the
radio.

Eliminate the simple problems, then consider sending it in to the
pros, as you have done.

It is a good idea to have a second rig as backup.

Happy trails,

: them discharge too far, and keep the water up in them. But I do prefer
: a marine deep cycle if I had my choice as their design suits radio use
: better. But a car battery will work just fine. I'm running a 706 on
: one right now. I use a fully automatic charger to keep the charge up,
: but a trickle charge will work fine as long as you remember to unhook
: it when you have a full charge. Heavily discharging a car battery will
: greatly shorten it's life and capacity. All long as you avoid that,
: you won't have much trouble. A deep cycle can handle heavy discharges
: better, but even with those it's best not to heavily discharge them. I
: never heavily discharge any of those lead acid batteries on purpose.
: Sometimes it'll happen though out portable etc. If I buy a new battery
: just for radio use, I get the big marine deep cycles. MK

Here's my experience:

I find that I have had to replace stock Automotive starting batteries
about 2:1 when compared to Marine Deep Cycle batteries.

I have had good life with Gates cells even though I have only bought
used ones. All of gells (or whatever) are pulls from UPS service, and
either they are good and I get a few years use or I pitch them. I have
a couple that claim to be sealed that didn't have as much life as the

sealed Gells (says "GELL" on the side) that were 5 years old when
I got them.

Currently I have 7 years on a Nautilus group 27 Deep Cycle Marine
in the trunk (in a box with a fusible link) that pulls all the radio gear
with the key off and has still outlasted 2 "premium" 72 month batteries
in the front of the vehicle. Before I went to dual systems my battery
life on the front OEM and Premium batteries was even worse. Even
when I was buying the best that could squeeze into the space.
I can't count how many Die Hard and JCPenny batteries I fried when
I was running around with Motracs in the early days. If only Radio
Shack had them on the "free battery a month" cards along with
"lifetime" tubes.

If you can find an old Comdel CP11, they were an excellent processor.
Plugs in between mike
and audio in on the rig. They convert the audio to SSB, clip it,
filter it and convert it back to
audio again. So it gives the benefit of rf clipping but is in your
audio chain.

Ahem, IMHO, the best one is the one I designed.

See: http://users.triconet.org/wesandlinda/s_proc.pdf

for my paper which was published in Ham Radio Magazine Sept 1979.

There is a remote possibility that I can scrounge up a board for the clipper/filter for this project. The Plessey chip is long obsolete so if you would like compression ahead of the clipper, you would need an alternate circuit.

Once upon a time this was offered as a kit by a company that stole the design from me, but they went belly up a long time ago.

Thanks for taking time to look. I'll be leaving to a hamfest Friday around midday.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355767932

This is a very clean example of the Mizuho SX-59 solid state preselector which was sold in the U.S. by Gilfer Associates in the late '70's. It will really punch up the sensitivity and help reduce images in many older ham and shortwave receivers, especially the tube types that seemed to run out of gas above 20 meters. It has an internal relay that can be remote-controlled for transceive operation
I will include the data sheet, operating instructions and manual with this purchase.

Thanks again for looking.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355821375

This is one of those big old crystals from way back when. It looks like a FT-243 on steroids - long pins and wide spacing. This would be a great one for a homebrew CW rig as the 3544 kHz. puts in right in the middle of the "general" segment of the 80 meter band.

Thanks again for looking.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355966567

There can't be many of these around, although I think I can lay my hands on one more N.I.B. This transistorized Jackson Electrical Instruments Company Model 562 Code Oscillator and Monitor apparently dates back to the early '60's (before zip codes). It is a high-end unit, as code oscillators go, and is designed to be hooked up to your transmitter to monitor your keying, or for code practice. If you have two of them, there are connections to hook them together for sending and receiving, like the old Boy Scout set-up my brother and I learned CW on back in '64. There's even a blank on the front panel for, according to the instructions, "painting your call-sign" on it. Instructions, tag, and warranty card are included. I wouldn't count on getting very good warranty service on it, though HI!

Thanks again for looking.

I like the holster idea.. I had tried the standard belt clip on the fanny pack belt. It seemed to work fine.. A holster sounds better..

I just got the Icom T7H. Have been using a W31A in my experimenting.

I have been playing with a standard speaker mike.. The wind noise is fairly high. I just got yester and haven't tried the Pryme SPM-400A with the PTT extension.. I had received a message from a guy in the UK and he was using the same with good success..

The ride is Sunday and we are supposed to have rain today so I'm not sure I will make it out before the club ride..

Thanks for the feedback.

"David Hubbell" <hubbell@ptd.net> wrote in message
news:3CF59459.D8E1D96F@ptd.net...
Hi John,
I use my Yaesu VX-5R with a Radio Shack Belt Holster(42-263@$9.99), Radio Shack(Headset adapter VOX box(21-1832@$14.99) and Jabra Boom Mic . The Jabra is
the most comfortable ear phone that I have used. I attach the belt holster to my
water pack. When hunched over the handle bars of my mt bike the antenna is almost verticle. I have found that if you attach the radio to the bike you will
eventually brake the mic cable or worst, the rig. Having the entire thing attached to my back allows me a quick dismount, not to mention a fall that happens almost every ride. If you need to change freqs on a regular basis then I
would suggest getting the arm band holster (42-265@7.99). I have used my Yaesu
FT-530 with the remote view mic. This combination is great if you are changing
freqs all the time. The battery drain is greater on the 530 than the VX-5R.

I have used the VX5 with the belt holster for most of my outdoors Climbs, Hikes,
Ski Trips, and Raft Trips. I always have a water pack on my back or a napsack so
the belt holster seems to adapt to most packs. The one draw back to the VX5 is
that you need the Mic Adapter cable to interface the 2 plug mics. I tends to come unpluged if you do not tuck it in the leather case properly.

If you need a fixed mount on the bike then I would not use the head set but
opt
for the hand mic. I have plans for a great mono band ant. for the bike if
you
use the fixed mount. If you have a luggage rack in back and want avdual band
ant., install a 1/2 wave mobile to it.

Have fun and let me know what you ended up with.

There are many ways to skin this cat, depending on power levels,
bands, etc. Some of us do HF, and that presents additional challenges.
I am a member of the Bicycle Mobile Hams of America and have to
give them a plug. Check out the links on the website for useful info:

I have one of these, (Comdel) if you're interested drop me a email at
dj2001@mn.rr.com

Ham Radio was the best ham radio magazine bar none. It was rich with
good technical articles. I have all issues from the first to the last,
but I am keeping them, I still pull a couple of issues once in a while
to just read the articles which are more interesting than what we get
now. I remember the very good split band processor article. I can't
remember the name of the company that built those but I think they were
marketed by Alpha for a while. I'd have to look in one of the HR issues.

I just got my first radio, a YAESU FT-7100 (still haven't set it up).
I want to get a power supply so that I can use it both
at home and in the car.
Does anyone know how much power the radio needs?
I found two 13.8v power supplies at 6 and 10AMPS.
Will 6AMPS be enough for the radio? Is there anything else
I should know before buying a power supply?

thanks,
Andreas

Bigger is better. Some (most?) PSs do not provide full voltage at their max rated current and others make noise. A very respected brand PS drove my packet station nuts. Worked FB xmiting 5 watts but not 50. Turned out the raterfratzin PS put out mucho noise when current approached the rated max.

HRO (and others) offer a 23A switching supply for about $80 IIRC. I'd use a battery and trickle charger before buying any small PS. Walmart had lawn tractor batteries for $15 last week. Side benefit: station works even if (when?) house power fails.

The foam wind covers are often used to reduce wind noise at the mike,
for a separate boom type mike. Maybe you can get a small piece of soft
foam and experiment.

My two 50W mobile Yaesu radios draw up to 7-8 amps on full transmit power.

As the other station wrote bigger is better.

Jon

|I have one of these, (Comdel) if you're interested drop me a email at
|dj2001@mn.rr.com

I saw one of the on ebay a while back. Almost bid on it just to "check out the competition." <g>

|
|Ham Radio was the best ham radio magazine bar none. It was rich with
|good technical articles. I have all issues from the first to the last,
|but I am keeping them, I still pull a couple of issues once in a while
|to just read the articles which are more interesting than what we get
|now. I remember the very good split band processor article. I can't
|remember the name of the company that built those but I think they were
|marketed by Alpha for a while. I'd have to look in one of the HR issues.

Maximillion Associates built a commercial split band processor.

After my article was published, I was swamped with requests for a source of circuit boards. I wasn't in the board business but I got so many requests I went to a local company and ordered a minimum run of 100 sets.

I had no soon committed to this than a letter arrives from a company called Circuit Board Specialists. The letter included a set of boards and informed me that they had had so many requests that *they* were going to offer boards for sale. Since the boards had both *my* call sign and the hr logo on them I called Jim Fisk, the founder and editor of hr magazine.

I asked him whether he had a problem with copyright and he replied that he had no objection; and "Oh, by the way, there is a kit coming out for your design." What he failed to mention was that the kit was the first offering from a new company named Radio Kit, that he just happened to own. The kits apparently were in work before the article was published.

I wound up paying for a small classified ad in hr and sold out the first run of boards as well as a follow up order. They literally when around the world. I actually had a request from a VK4 nine years after publication.

BTW, my (and everybody else's) Kenwood TS-870 uses a split band speech processor.

I have an early Collins S-Line for sale. I thought I had this sold, but after more than 6 weeks, never received the money, so it is up for sale again. It consists of the 75S-1 Receiver,
32S-1 Transmitter, 516F-2 Power Supply with Speaker installed. The Receiver SN is 10K and the Transmitter SN is 22K. This S-Line is the cleanest S-1 series that I have seen. It looks almost new inside and out. Obviously seldom used. It comes with all of the original cables, but no manuals. This is a one owner system from an estate and the manuals could not be located. I am asking $1150 plus shipping from 79602. Digital pictures upon request. Thanks, Charlie Hugg, K5MBX

Matt,

No need to fall on the sword yet...

Follow the string to where it is tied to the tension spring on the
largest pulley wheel assembly. Remove the spring, untie the knot, pull a
little tension on the string and re-tie the knot.
Good luck.

ZUT,

Vern Weiss, W9STB

Or use rosin. Dissolve a little bit in alcohol and apply it on the
shaft. Its a little sticky at first but will gradually smooth out.
I've heard of people using the sticky old wax from old capacitors for
the same thing. Dunno about that one.
-Bill

6801. Re: 4 or 6 pin Maxtrac Ext Speaker Plug

Newsgroup: rec.radio.amateur.equipment
Date: 2002-05-31 18:56:46 UTC
From: "Bob M." <xxxxx@yyyy.zzz>
Message-ID: <OHPJ8.74066$%y.7744052@bin4.nnrp.aus1.giganews.com>
Source record: 42806
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.swap

The 2ch Maxtrac radio I have has a 5-pin male connector on the back. The older units came with this; the newer ones use a 16-pin dual-row connector. Pin 1 is towards the outer edge of the radio and is ground. Pin 4 is the speaker audio pin. You could probably fashion a couple of connectors, or wire-wrap something on them and do away with the connector. I'd even consider soldering a pair of wires to the pins and using a 1/8 inch jack and plug arrangement for your external speaker.

There are usually half a dozen 5-pin accessory connector kits for sale on eBay, usually with sufficient female pins and jumper wires to connect an external speaker. Look for Motorola Maxtrac and you'll find both varieties. One deficiency with this connector is that you can't disconnect the internal speaker when you attach an external one; you need the 16-pin model radios to accomplish that task.

Having said that, My Maxtrac service manual lists the 5-pin plastic HOUSING (no female connector parts) as p/n15-80076M01, but since you need the female socket pieces, you'd still need more information. I don't know if such a small order is worth bothering Motorola for. You could probably buy the contact pins at Jameco - this is a standard Molex connector.

Hope this helps.
Bob M.

Many thanks for all the comments. I am curious. What about the W2IHY Technologies 8-Band Audio Equalizer and Noise Gate that is advertised in QST. Will it achieve similar results as a good speech processor?

GE Portables

GE MPA VHF 146-162 full system keypad. Radio is as new and is almost perfect. The only flaw is the grip tape under the PTT button is peeling at the edges. Otherwise perfect. The next feature is, The radio is Key pad programmable. 16 channel scan and front face programmable. Has a like new battery and a good rapid charger. Also a belt clip. $500.00

GE MPA VHF Scan 157 - 174 split. 192 channels. Nice radio 8.5 condition with battery and standard charger. I have it programmed down to 154 MHz with no trouble but will go no lower. $225.00

GE MPA UHF Scan 440 - 470 192 channel scan. Radio works great. A little paint wear on the edges but I have seen worse. With charger and battery. $225.00

GE MPD select model 470.- 488 MHz. 48 channel Alpha-Numeric display. With battery and standard charger. 7-7.5 $85.00

GE MPD scan VHF 150.8 174. 48 channel alphanumeric display. These look good and come with a battery and standard charger. 125.00 each.

MPD Voice Guard VHF system model with full keypad. 48 channel alpha display. With battery and standard charger. $135.00

GE PCS VHF 2 channel. Like new 9.5-10 condition. 150 -170 MHz. With battery, antenna, leather case, and pocket charger. $100.00 each. 2 available.

GE PLS VHF 16 channel. These average an 8 - 8.5 condition. 150 -170 but I have programmed these in the ham band with no trouble. These have battery, antenna, and standard charger. I will program these since it is suitcase programmer only. $100.00 includes programming. I have several of these.

GE PLS UHF 16 Channel. 8 to 8.5 also. 450 - 470 split but I can program

these to the ham band. With battery, Antenna, and Charger. Includes Programming all for $100.00 each.

GE MPS VHF Like new 10 channel. With new battery, new antenna, and a standard charger. $65.00

GE MPS VHF 12 channel. Set of 4 that talk to each other with all new batteries and antennas. All in a rack charger. $225.00

GE Monogram UHF 10 channel portables. 3 radios 2 new batteries and 1 good battery. With 1 dual slot charger. $200.00 all 3 radios.

GE Monogram VHF 10 channel portable. 157-179 split. ex CSX radio. I sold this radio a year ago but have taken it on trade. Condition 8 with belt clip and charger. I had this radio run for stolen from CSX by
a local CSX Special Agent when I first bought these in a lot and was told
that it had been sold at salvage. Perfect for a RR Museum or shortline on a
budget. This could also be programmed for marine frequencies. Like new tall
Battery. $100.00

GE Mobiles

GE Phoenix SX VHF 128 channel scan. With Mic, Has all 8 proms. $100.00

GE MVS VHF 128 channel scan. 136.-153. Split but I have programmed these as 150. - 174 split and they work fine. This radio has 8 modes of
16 channels. Includes Mic but no power cord or bracket. $175.00

GE MVS 800 conventional 2 channel. With mic tested OK $95.00

GE MLS UHF 8 channel. With Mic, power cord and hang up box. MLSU240 450. - 470 Looks good. $125.00

GE Mastr exec II VHF 75-watt mobile complete with accessories. $60.00 each

GE Mastr exec II VHF Mobile extender (repeater like Pac rt) for Mastr II or Delta. $20.00 each

GE Mastr exec II VHF Mobile extender for GE Ranger (only Exec II that I have seen marked Ericsson) $65.00

.GE S550 head 16 channel looks good but not tested. $35.00

GE S700 head and complete Motorcycle cable set for Delta or Ranger. 16 channel model has short cable and some handle bar mounts. Mic included but no speaker. Not tested yet since I just got it in. $50.00

GE Mobile Vehicle Adapter for MPA, MTL, MPD, and TPX. This unit charges your battery and turns your portable into a mobile radio. (Convert a Com) With mic, speaker, and power cable. $100.00

GE Accessories

GE TQ 2310 suitcase programmer. Has PLS, Phoenix, Delta s/sx, Voice Guard, MPS, and Ranger. Printer is not working but I tried and it programs radios without the printer. Has manual for the programmer and the
computer. Has Phoenix cable and Voice guard cable. All in the original GE case
tested and working. (except printer) $850.00 (I found a printer and will test
it this week)

Mastr II control cable. $8.00 each

Mastr II head for mobile repeater operation. $5.00

Mastr II Mic. $5.00

Mastr II 8 channel tone boards. $5.00

Mastr Exec II VHF receive section. $20.00

Mastr Exec II VHF Exciter. $18.00

Mobile Repeater cable for Mastr II. $10.00

Mobile Repeater cable for Delta or Ranger. $30.00. I have seen programming cables made from these.

GE white Versatones, 103.5, 162.2, 173.8, 179.9, 186.2, and 203.5. $4.00 each. I have a large amount of 203.5,186.2, 179.9, 173.8, and 162.2. If you buy 10 = $3.00 each. Buy 15 =$2.50 each. Buy 50 = $1.50 each.

GE Mastr II Icoms. EC = $5.00 each, 5C = $10.00 each.

GE Delta cables. These are the downloading type used with the S820 heads. And all other heads $40.00 each

Delta mounting plates. $10.00 each

Ranger mounting plate. $15.00

GE S-550 / 500 and others mounting brackets. $5.00 each

GE MPA, MPD, MTL standard Speaker mic. $25.00

GE PCS Universal charger. With wall transformer $20.00 each

GE MPA standard chargers. $20.00 each

GE MPA Rapid chargers. $30.00 each

GE MPI desk charger with wall transformer. $10.00

GE MPI Rack charger, 8 position. 25.00

GE MPI Mobile battery charger, Rare. $20.00

GE Battery discharge analyzer. For MPA, MPD batteries. Attaches to a rapid rack charger with a DB 15 cable and uses a MPD body to attach a battery to. Has LED readout in display area of MPD body to tell discharge rate. Another rare GE goodie. $45.00

GE shoulder strap like new, attaches where belt clip is. $15.00

GE Belt clips. $10.00 each

GE Voter. Has 9 total rec. cards and 2 TX cards. With extender card and power supply / speaker. $300.00

Other Radios and Accessories

Motorola Saber III VHF 146-174 split. 120 channel Alpha-Numeric display with secure - net module. (no out of country sales) des I think. I have been using this all week and talking on the ham band to test this radio. Battery has lasted all week during drive time so it seems good. With rapidcharger and big battery. $500.00 or trade for a VHF MRK II

Icom 3200 a Dual band ham radio. Has box and manual but no mounting bracket. Has tone squelch board installed. $200.00

Icom IC 24-at Dual band Portable. In good shape, Display has no scratches and only 1 small patch of the paint is peeled off of the back of this radio. With manual and wall charger. $165.00

ADI AT 201. 2 meter portable nice like new and in the box with the manual. Has 5 watt battery and wall charger. $90.00

Yaesu ft 2400 2 meter mobile. Has Mounting Bracket and manual. Nice 2 meter Radio. $125.00

Maxon 5050a Low band portable pair. Like new condition with 1 battery charger but I will split up the pair if someone wants 1 radio only. 6 channels programmed for 10 meter ham band on 2 repeater pair and 4 simplex frequencies. 2 radios and 1 charger $195.00

Marconi UHF portable. 16 channel scan with NOS battery. Made by Midland. $75.00

Midland 70-336B VHF Mobile radio. 8 channel scan. with mic.$75.00

Motorola GP300 VHF 2 channel. on ham band. Has battery OK condition and charger. $150.00

Motorola Mitrek VHF high 110 watt drawer only. $50.00

Motorola MT500 VHF nice shape. Crystals removed but I have 1 set of crystals for each radio. Also have a working battery and charger for each. I have 4 of these. $50.00 all

Uniden SMS 825 TS, 800 MHz Dash mount radio. $55.00

Voter from IMTS phone system. 2 rec. and 2 TX cards. $40.00

Maxon Rapid Rack charger for 0510/0520 radios. Think they will work with the sp2000 as well.$35.00

Consignment section

This area is for a few friends who like those other radios you know "Motorola" They are good people and I will pass along any trades you may wish to make.

MOTOROLA X9000 VHF 50 watts, alphanumeric head, Siren complete. $425.00

Motorola single rapid chargers for HT600, MT1000, P200. $25.00 each

Motorola HT1000 UHF Intrinsically safe Re-cased looks new. 16 channel scan with charger. $425.00

Motorola P200 UHF high power. 6 channel. $150.00

EF Johnson Challenger UHF 80 watt trunk mount, 99 channel Alpha-Numeric head. $225.00

Want List not FS
Extra parts for suitcase programmers. Data modules, Printers, cables, proms, Anything you have extra. MPA or MPD portables what do you have and what do you want for them? Johnson scorpion program cable.

Terms
All prices are plus shipping from 40201. All items are used unless noted and only have a no DOA warranty if I say it works. If I say not tested your on your own. If I think it may be bad I will not list it.
I take cash, Postal Money Orders, Paypal, and checks but I hold them for up to
two weeks to clear before I ship. If you have a question E-mail me.

I understand these concerns, but I was hoping to get a better fuller sound if possible. It appears not to be, so I'll have to wait for that TS-940, I guess. Since 90% of my operation is DX hunting anyway, I don't mind the highs. I just want to get audio that isn't quite so lifeless and dull. With 100W and a dipole, I need every bit of advantage I can get!

>W2 Interboro Rapid Transit Great call!

Yup; check out my QSL on QRZ.com and my Website and you'll see why I
chose it <grin>.

Cheers, |The Third Edition of my book
Peter Dougherty |"Tracks of the New York City Subway"
